

STMicroelectronics N.V.
Annual Report
2024

This document is the PDF/printed version of the 2024 Annual Report of STMicroelectronics N.V. and has been prepared for ease of use. The 2024 Annual Report was made publicly available as specified in the Regulatory Technical Standards on European single electronic reporting format (the ESEF package) (Delegated Regulation (EU) 2019/815). The ESEF package is available on the company's website at <https://investors.st.com/financialinformation/annual-and-semi-annual-reports> and includes a human-readable XHTML version of the 2024 Annual Report. In any case of discrepancies between this PDF version and the ESEF package, the latter prevails.

STMicroelectronics N.V.'s Dutch annual report over 2024 consists of a message from the Managing Board on the financial year 2024 (Section 1), the management report (Section 2 through Section 5), the dividend policy (Section 6), the financial information (Section 7 through Section 9) and important dates (Section 10).

1. Message from our Managing Board on the financial year 2024

Dear Shareholder,

2024 turned out to be one of the most challenging years in recent memory for ST, particularly for Industrial and Automotive applications. The year was characterized by unexpectedly weaker end demand and higher levels of inventory. Coping with this reality, we elected to postpone our \$20B+ revenue ambition plan to 2030 and set a new intermediate financial model for 2027/2028 at our Capital Markets Day last November. As we were managing this challenging business environment, we continued to focus on our long-term innovation strategy, advancing the development of new proprietary technologies and designing new products into our customers' next generations of systems and devices.

2024 review

In 2024, our net revenues decreased 23.2% to \$13.27 billion, mainly driven by a strong decrease in Industrial and, to a lesser extent, in Automotive. In more detail, on a year-over-year basis, Industrial revenues decreased 49%, Automotive was down 14%, Personal Electronics declined 11% and Communications Equipment and Computer Peripherals were down 2%.

In Automotive, we continued to execute our strategy supporting the transition of the automotive industry to car electrification and digitalization. In electrification we won business with our power discrete and modules, both silicon and silicon carbide, as well as smart power technologies and smart fuse solutions.

With silicon carbide we had multiple high-value wins with both silicon carbide devices and modules for automotive customers. In China, which is the fastest growing market for electric vehicles, we have a very strong momentum in terms of design in activities and as of today we have more silicon carbide engagements with top Chinese car makers than any other suppliers. We also introduced our fourth generation of SiC MOSFET technology, bringing new benchmarks in power efficiency, power density and robustness.

We also saw continued design win momentum across within our automotive microcontrollers portfolio applications such as software-defined vehicle architectures and car electrification systems. Important trends here are the integration of multiple ECUs into a single more powerful unit and the zonal architecture approach. In ADAS, we worked closely with our long-time customer and partner Mobileye with a focus on their latest market introduction – the EyeQ6 family.

In Industrial, in power and energy management applications we had a broad range of design wins, including in data centers, EV charging stations, renewable energy systems, white goods, and factory automation. We introduced a wide range of new products, solutions and reference designs also including high-performance telecom applications and AI server power supply - an important growth opportunity around AI for ST. In embedded processing solutions we further strengthened STM32 microcontroller and microprocessor families and ecosystem introducing many new products and tools. A particular focus was on Edge AI enablement for our customers including making made our most powerful MCU series, the STM32N6, available for broad market adoption.

In Personal Electronics, we continued to be successful with our focused approach, through solid execution of engaged customer programs, securing sockets in flagship devices with differentiated products, and leveraging our broad portfolio to address high-volume applications.

In Communications Equipment our RF communication business delivered solid results. We continued to progress well with engaged customer programs in satellite and cellular communication infrastructure and received awards from a new player in the LEO satellite market.

We continued to invest in our global manufacturing infrastructure's strategic initiatives. In May we announced the construction of a new high-volume 200mm silicon carbide manufacturing facility in Catania (Italy) to manufacture power devices and modules. Along with the SiC substrate manufacturing facility on

the same site, these facilities will form ST's silicon carbide campus, a fully vertically integrated manufacturing hub for SiC devices.

All our strategic manufacturing initiatives are aligned with our sustainability strategy and our commitment to sustainable manufacturing in terms of energy consumption, greenhouse gas emissions, air and water quality.

Major corporate developments

We made a number of significant changes in the way our Company is structured and operates during 2024.

In January, we announced the reorganization of our product groups into two groups split in four reportable segments, as well as the creation of a new application marketing organization by end market implemented across all regions within the existing sales and marketing organization.

In May, Jean-Marc Chery was reappointed as member and Chairman of the Managing Board for a three-year term to expire at the end of our 2027 AGM; and Lorenzo Grandi was appointed as member of the Managing Board for the same three-year term.

In October we announced the launch of a new company-wide program to reshape our manufacturing footprint accelerating our wafer fab capacity to 300mm silicon and 200mm silicon carbide and resizing our global cost base. This program should result in strengthening our capability to grow our revenues with an improved operating efficiency resulting in annual cost savings in the high triple-digit million-dollar range exiting 2027.

Unchanged Strategy

Our strategy remains based on three fundamentals. First, a value proposition for stakeholders focused on sustainable and profitable growth, providing differentiating enablers to customers and a strong commitment to sustainability.

Second, our global Integrated Device Manufacturer ("IDM") operational model, with highly-skilled employees, a wide range of capabilities in proprietary and innovative technology and IP design, product and solution development, and with advanced manufacturing (both in-house and with selected partners) providing us with a strong competitive advantage and supply chain resilience for our customers.

Third, three unchanged long-term trends acting as enablers for our industry: smarter mobility; better power and energy management; and the pervasion of cloud-connected and autonomous things.

These fundamentals continue to guide our market positioning and customer engagements, continuous and open innovation processes, product and IP design and technology R&D efforts and manufacturing investments.

Our objective is to restore profitability levels compatible with our model, while strengthening our strategic assets and continuing to invest in innovation to capture the revenues growth opportunities created by the long-term trends transforming the end-markets we address.

We stand by our conviction that, together with our customers, partners and employees, ST is a key enabler of the transformation of all industries towards a smarter, safer and more sustainable future.

2. Corporate overview

In this annual report, references to "we", "us", "our", "the Company", "our Company" and "ST" are to STMicroelectronics N.V., references to "ST Group Company" are to any of STMicroelectronics N.V.'s direct or indirect subsidiaries, and references to the "Group" or "ST Group" are to STMicroelectronics N.V. and its direct and indirect subsidiaries.

Certain industry-specific, accounting, legal, or otherwise commonly used defined terms included in this annual report are defined in the "Certain definitions" table included in Appendix 11.6., and in the "ST Policies" table included in Appendix 11.7. for ease of reference. Some defined terms included in the relevant Appendices have also been defined throughout the body of this document, as required for clarity.

2.1. History and development of STMicroelectronics

STMicroelectronics N.V. was formed and incorporated in 1987 as a result of the combination of the semiconductor business of SGS Microelettronica (then owned by Società Finanziaria Telefonica (S.T.E.T.), an Italian corporation) and the non-military business of Thomson Semiconducteurs (then owned by the former Thomson-CSF, now Thales, a French corporation). We completed our initial public offering in December 1994 with simultaneous listings on the Bourse de Paris (now known as "Euronext Paris") and the New York Stock Exchange. In 1998, we also listed our shares on the Borsa Italiana (the Italian stock exchange).

We operated as SGS-Thomson Microelectronics N.V. until May 1998, when we changed our name to STMicroelectronics N.V. We are organized under the laws of The Netherlands, with our corporate legal seat in Amsterdam, The Netherlands, and our head offices at WTC Schiphol Airport, Schiphol Boulevard 265, 1118 BH Schiphol, The Netherlands. Our telephone number there is +31-20-654-3210. Our headquarters and operational offices are managed through our wholly owned subsidiary, STMicroelectronics International N.V., and are located at 39 Chemin du Champ des Filles, 1228 Plan-les-Ouates, Geneva, Switzerland. Our main telephone number there is +41-22-929-2929. Our agent for service of process in the United States related to our registration under the U.S. Securities Exchange Act of 1934, as amended, is Corporation Service Company (CSC), 80 State Street, Albany, New York, 12207. Our operations are also conducted through our various ST Group Companies, which are organized and operated according to the laws of their country of incorporation, and consolidated by STMicroelectronics N.V.

2.2. Organizational structure

We are organized in a matrix structure with geographic regions interacting with product lines, both supported by shared technology and manufacturing operations and by central functions, designed to enable us to be closer to our customers and to facilitate communication among the research and development ("R&D"), production, marketing and sales organizations.

While STMicroelectronics N.V. is our parent company, we conduct our global business through STMicroelectronics International N.V. and also conduct our operations through service activities from our subsidiaries. We provide certain administrative, human resources, legal, treasury, strategy, manufacturing, marketing, insurance and other overhead services to our consolidated subsidiaries pursuant to service agreements for which we recover the cost.

2.3. Product information

Semiconductor devices are electronic components that serve as the building blocks inside electronic systems and equipment. Semiconductor devices, generally known as "chips" combine multiple transistors on a single piece of material to form a complete electronic circuit. With our portfolio of semiconductor products, we serve customers across the spectrum of electronics applications with innovative solutions.

We have a portfolio of power products and analog products, including sensors, signal channel devices and output power stages - discrete and/or integrated - as well as complete power management blocks. Our analog products, including both general purpose and application specific, can fulfill the needs of a wide range of designs and systems.

We also have digital products that are at the heart of electronics systems, including microcontrollers and microprocessors, ASICs and optical sensing solutions. Our full set of microcontrollers and microprocessors includes one of the industry's broadest ranges of general-purpose devices serving all market segments, microprocessors addressing the industrial market, secure microcontrollers for mobile devices, wearables, banking, identification, industrial, automotive and Internet of Things ("IoT") markets and a series of embedded processing solutions for our addressed end-markets (Automotive, Industrial, Personal Electronics, and Communications Equipment, Computers and Peripherals, each as defined below).

We are one of the leading suppliers and innovators in the domain of semiconductor devices dedicated to automotive applications. Our offer includes a wide range of products, covering systems and functions from powertrain, chassis and safety, to audio, infotainment and telematics, as well as body and convenience. We offer automotive microcontrollers as well as solutions for ADAS and we provide automotive-grade MEMS as well as imaging solutions, including wide bandgap devices for hybrid and electric vehicles. The products are designed and manufactured specifically for automotive applications and complemented by a large range of "automotive grade" standard products, both tested and guaranteed to perform under stringent automotive environmental conditions.

On top of the product design R&D spending, our principal investment and resource allocation decisions in the semiconductor business area are for expenditures on technology R&D as well as capital investments in front-end and back-end manufacturing facilities, which are planned at the corporate level; therefore, our product groups share common R&D for process technology and manufacturing capacity for some of their products.

As of December 31, 2024, our reportable segments were as follows:

- In our Analog, Power & Discrete, MEMS and Sensors ("APMS") product group:
 - o Analog Products, MEMS and Sensors ("AM&S") segment, comprised of ST analog products, MEMS sensors and actuators, and optical sensing solutions.
 - o Power and Discrete products ("P&D") segment comprised of discrete and power transistor products.
- In our Microcontrollers, Digital ICs and RF products ("MDRF") product group:
 - o Microcontrollers ("MCU") segment, comprised of general-purpose microcontrollers, secure and automotive microcontrollers, microprocessors and connected security products (including EEPROM).
 - o Digital ICs and RF products ("D&RF") segment, comprised of automotive ADAS, infotainment, RF and communication products.

Below is a description of our main categories of products as of December 31, 2024.

2.3.1. Analog, Power & Discrete, MEMS and Sensors ("APMS") product group

2.3.1.1. Analog Products, MEMS and Sensors ("AM&S") segment

Analog Integrated Circuits

We develop a broad range of innovative smart power and analog ICs, comprising both application specific and general-purpose analog products. These serve a wide spectrum of markets and applications including automotive, smart grid, cloud computing, data servers, industrial automation, power conversion and personal electronics.

We are a leading supplier of analog semiconductor devices for automotive industry worldwide, enabling the electrification and digitalization of the car, and the pervasion of electronics in both traditional internal combustion engine vehicles as well as in electric cars, full or hybrid. Based on our proprietary BCD and

VIPOWER technologies, we provide solutions for a range of car systems, such as battery management, traction engine, braking systems, airbag, door zone, e-fuse, and power management for ECUs.

In Industrial (as defined below) our product families include ASICs and ASSPs, covering motion control, power and energy management and factory automation. We continuously introduce new devices in our MasterGaN® and VIPerGaN families integrating a silicon driver and GaN power transistors in a single package. Our connectivity ICs range from wireline to wireless solutions. For wireline communication, we offer a complete family of transceivers compatible with different protocol standards used in the industry. Finally, we have a strong presence with our galvanic isolated gate drivers (also known as STGAP family) that are used both in industrial and automotive markets.

In Communications Equipment, Computers and Peripherals (as defined below) we serve our customers with power management solutions for data storage, as well as addressing the high power and high efficiency needs for servers and AI data centers.

In Personal Electronics (as defined below) we provide custom analog ICs, mainly power management ICs for battery powered devices. We deploy wireless charging solutions from low to high power across applications from smartphones to wearables, as well as display power management ICs and FingerTip touch screen controllers.

In General-Purpose Analog (as defined below) we have a wide product portfolio addressing all the market segments, spanning high-end analog front-end products, AC-DC and DC-DC converters, gate drivers for MOSFET, IGBT, SiC and GaN transistors, intelligent power switches, high and low side drivers, LED drivers, real-time clocks and timers, supervision and control ICs, as well as a comprehensive range of operational amplifiers (both low-voltage and high-voltage), comparators and current-sense amplifiers.

MEMS Sensors and Actuators

Our MEMS portfolio includes both sensors and actuators for a broad range of applications, including smartphones, personal devices, computers, automotive, industrial, healthcare and IoT.

MEMS sensors include motion MEMS (accelerometers, gyroscopes, magnetic sensors), environmental sensors (pressure, temperature and presence detection), biosensors and microphones. We offer a unique sensor portfolio, from discrete to fully integrated solutions, high performance sensor fusion to improve the accuracy of multi-axis sensor systems in order to enable highly-demanding applications, such as navigation and location-based services, optical image stabilization and high-level quality products. Our latest range of smart sensors includes machine learning and edge AI processing capabilities built into the sensor enabling ultra-low power gesture recognition and tracking applications.

MEMS actuators include: (i) thermal and piezoelectric actuators for 2D and 3D printing in consumer, commercial and industrial market applications and (ii) piezoelectric actuators for applications such as smartphone camera autofocus, MEMS loudspeakers and image projection.

Optical Sensing Solutions

We have a broad portfolio of optical sensing solutions based on our proprietary differentiated technologies such as FlightSense and BrightSense. These address various markets including 3D sensing for automotive applications such as in-cabin monitoring and occupant detection, as well as for industrial and consumer applications. Our optical sensing solutions are composed of both specialized components developed for dedicated customer systems; and full optical sense and illumination system solutions targeting multiple customers.

2.3.1.1. Power and Discrete products ("P&D") segment

Discrete and Power Transistor

Our discrete and power transistors families include both power products and protection devices serving our end markets (Automotive, Industrial, Personal Electronics and Communications Equipment, and Computers and Peripherals, each as defined below).

Our leading-edge power technologies cater to both high-voltage and low-voltage applications. We combine a full range of packaging options with innovative die bonding technologies, utilizing both silicon and wide bandgap materials. Our portfolio includes silicon MOSFETs, SiC MOSFETs, IGBTs, thyristors, rectifiers, and power modules as well as a wide range of power bipolar transistors. We are expanding our offering based on wide bandgap materials with a full range of GaN-based power device solutions targeting a wide variety of applications.

Our portfolio of protection devices supports all industry requirements for electrical overstress and electrostatic surge protection, lightning surge protection and automotive protection. Our devices meet or exceed international protection standards for electrical hazards on electronics boards found in the demanding markets we serve.

2.3.2. Microcontrollers, Digital ICs and RF products ("MDRF") product group

2.3.2.1. Microcontrollers ("MCU") segment

General purpose microcontrollers and microprocessors

Our general purpose microcontroller product portfolio largely contains families of products based on 32-bit ARM®-based Cortex®-M0, -M0+, -M3, -M4, -M33, -M55 and M7 with the ARM® TrustZone®. The STM32N6 MCU series introduced in December 2024 is ST's most powerful to date, and the first to embed ST's proprietary neural processing unit, the neural-ART accelerator, currently delivering 600 times more machine-learning performance than a high-end STM32 MCU.

For each product family, a broad selection of features is available with respect to microcontroller performance, ultra-low-power, memory size, peripherals, and packaging. Numerous dedicated families include features such as our TouchGFX advanced 3D graphics, dedicated peripherals for industrial motor controls, security features, and low-power wireless connectivity.

Our latest microprocessors product line targeting the industrial market features 64-bit processing and edge AI acceleration. Based on the Arm Cortex®-A35, these microprocessors run up to 1.5GHz, enhancing the main processing capability compared to first-generation devices. Additionally, they come with a dedicated Linux distribution.

The STM32 family based on the ARM® Cortex®-M and -A processors are designed to offer significant degrees of freedom to microcontroller and microprocessors users. The product range combines very high performance, real-time capabilities, digital signal processing, and low-power, low-voltage operation, while maintaining full integration and ease of development. We offer an unparalleled range of STM32 devices, accompanied by a vast choice of tools and software including support for industrial safety standard IEC 61508 SIL2/3, human machine interface.

We continued to strengthen our STM32 microcontroller ecosystem with various software releases and updates of STM32Cube, CubeMX and TouchGFX. We also introduced ST Edge AI suite, a comprehensive approach to help developers create AI for the tiny edge. This comprehensive portfolio makes our STM32 an ideal choice for enabling ever smarter objects for an increasingly broad range of applications.

Secure Microcontrollers and NFC solutions

We offer cutting-edge solutions for secure and connected applications. Security is particularly critical to near field communication ("NFC"), contactless and wired connectivity technologies that target payment, identification, access control and all secure transactions in mobile, industrial, consumer and automotive applications. Building upon our 30+ year experience in security, we offer one of the most ambitious and coherent security portfolios, with the right level of protection from a basic identification of objects (tags and secure tags) to the most advanced security with our certified secure microcontrollers.

Our well-defined system-level architecture enables us to match our security strategy with current and future threats, accelerating our pervasion in the security ecosystem. We offer security solutions for everybody, creating the opportunity to address customers for whom security is a must.

With the STSECURE and ST25 portfolio, we offer certified hardware and software solutions to answer the market demand in security and connectivity. In 2024, we delivered the industry's first FIPS 140-3 certified TPM for computer, server, and embedded systems. We diversified our portfolio with the introduction of the ST25TA-E NFC tag IC to strengthen the security of digital product passports and blockchain-based applications by implementing state-of-the-art on-chip digital signature mechanism, TruST25™ Edge.

Memories

Our wide range of small density serial non-volatile memories has among the highest industry performance. The serial EEPROM family ranges from 1 Kbit to 32 Mbits and offers the most common serial interfaces to facilitate adoption: I²C, SPI and Microwire. In 2024, we introduced Page EEPROM with two-in-one memory, creating a hybrid memory for applications that face extreme size and power constraints. Our wide range of products are also automotive compliant. Very small package options are available for applications where space is critical, such as in camera modules for consumer and mobile devices.

Automotive MCU

Our automotive microcontroller portfolio supports ongoing transformation of the industry through electrification and digitalization of the car. We offer a complete portfolio of products able to address all the needs, from local actuation and smart sensing to high-performance real-time processing with cross functional integration across multiple application domains.

Our Stellar family is a scalable ARM-based hardware architecture supporting real-time virtualization of multi-ASIL ECUs. It features a rich set of IOs and peripherals, and offers a unique over-the-air update value proposition. This is made possible by leveraging our internally developed embedded non-volatile memory technology, built on 28nm FD-SOI technology. This is the industry's first family of emerging technologies after eFlash, representing the most mature and smallest memory cell automotive-grade solution on the market. The Stellar family is optimized for electrification, including x-in-1 vehicle motion control computer, new vehicle architectures and safety MCUs for safety critical subsystems, such as ADAS, zone and body integration.

In 2024 we announced that we will build a new series in the STM32 family tailored for automotive. The STM32A will be designed for actuation at the very edge of the car network, such as car body control and smart sensor management, and will support ASIL B automotive safety level.

2.3.2.2. Digital ICs and RF Products ("D&RF") segment

RF Communications and ASICs

We offer RF, digital and mixed-signal ASICs, which are based on our proprietary FD-SOI, RF-SOI, and SiGe technologies, as well as foundry-based FinFET technologies, for satellite communications (satellites, ground stations, user antennas and terminals) as well as networking infrastructure.

We also use our proprietary FD-SOI, RF-SOI, and SiGe technologies to provide RF and mmWave components for terrestrial communication, based on our know-how in analog and digital beamforming design techniques, to address massive MIMO antenna and 60GHz very-short-range ultra-low-power multi-gigabit/second links.

We also address the fast-growing market of interconnect in data centers based on our SiGe and SiPho technologies.

ADAS, RF and Infotainment

We are a leading player in ADAS, dedicated to improving the passenger experience and helping to avoid or minimize the severity of traffic accidents. We manufacture cutting-edge ADAS SoCs and radar systems that assist drivers with basic - high volume ADAS to advanced hand-off functions such as autonomous lane changing, front/rear collision avoidance and traffic jam assistance, paving the way towards most advanced eye-off systems. Our ADAS products meet the most stringent quality criteria required for automotive applications guaranteeing a safer driving experience.

Our car infotainment portfolio includes comprehensive solutions for digital radios, audio amplification and positioning systems. With our continuous innovation, we are the leader in the audio infotainment market, with a wide range of power amplifiers meeting all the needs, from head units to premium audio, from telematics to AVAS.

The positioning portfolio includes families of SoC and RF solutions capable of receiving signals from different bands and multiple satellite constellations. These solutions are designed to enhance the accuracy of the user's position and ensure reliable, safe and secure position even under poor satellite visibility conditions.

ST is also a leading provider of radio solutions for automotive infotainment systems and offers digital and analog terrestrial and satellite receivers, as well as multi-standard ICs designed to deliver world-class performance and functionality.

3. Report of the Managing Board

In accordance with Dutch law, our management is entrusted to our managing board (our "Managing Board") under the supervision of our supervisory board (our "Supervisory Board"). Under our articles of association (the "Articles of Association"), the members of our Managing Board are appointed for a three-year term at our AGM, by a simple majority of the votes cast, provided quorum conditions are met, upon a non-binding proposal by our Supervisory Board, which term may be renewed one or more times. On May 22, 2024, our AGM was held (the "2024 AGM") and Mr. Jean-Marc Chery was reappointed as member of our Managing Board with the function of President and Chief Executive Officer (our "President and Chief Executive Officer" or "CEO"), for a three-year term expiring at our 2027 AGM. At our 2024 AGM Mr. Lorenzo Grandi was appointed as member of the Managing Board with the function of President and Chief Financial Officer (our "President and Chief Financial Officer" or "CFO"), for a three-year term expiring at our 2027 AGM. We continue to review and strengthen the succession planning for the Managing Board to ensure business continuity, taking into account, amongst others, the rapidly changing technological, social, economic and regulatory developments in our industry.

3.1. Statement of the members of our Managing Board

The members of our Managing Board hereby declare that, to the best of their knowledge, the statutory financial statements as of December 31, 2024, and for the year then ended, prepared under Title 9 of Book 2 of the Dutch Civil Code and in accordance with IFRS as adopted by the EU, provide a true and fair view of the assets, liabilities, financial position and profit or loss of STMicroelectronics N.V. and the undertakings included in the consolidation taken as a whole. Furthermore, the members of our Managing Board hereby also declare that the report of the Managing Board includes a true and fair view concerning the statement of financial position as of December 31, 2024. The report of the Managing Board also includes the development and performance of STMicroelectronics N.V. and the undertakings included in the consolidation taken as a whole, together with the principal risk and uncertainties they face.

Jean-Marc Chery,
Chairman of our Managing Board,
President and Chief Executive Officer

Lorenzo Grandi,
Member of our Managing Board,
President and Chief Financial Officer

3.2. Business overview and performance

3.2.1. Results highlights for the year 2024

Our total available market is defined as “TAM”, while our serviceable available market is defined as “SAM” and represents the market for products sold by us (i.e., TAM excluding major devices such as microprocessors, graphics processing units / AI accelerators, DRAM and flash-memories, optoelectronics devices other than optical sensors, video processing and wireless application specific market products, such as baseband and application processors).

Based on industry data published by World Semiconductor Trade Statistics (“WSTS”), semiconductor industry revenues in 2024 increased on a year-over-year basis by approximately 19% for the TAM and decreased by approximately 5% for the SAM, to reach approximately \$628 billion and \$244 billion, respectively.

Full year 2024 total revenues decreased 23.2% to 13.27 billion from \$17.29 billion in 2023, as a result of an approximate 15% decrease in average selling prices, due to product mix and lower selling prices, and a 8% decrease in volumes. By reportable segments, AM&S revenues decreased 13.0%, driven by lower average selling prices of approximately 8% due to lower selling prices and less favorable product mix, and lower volumes of approximately 5%. P&D revenues decreased 18.8%, driven by lower average selling prices of approximately 11% due to a less favorable product mix and lower selling prices, and lower volumes of approximately 8%. MCU revenues decreased 38.80% due to lower volumes of approximately 20% and lower average selling prices of approximately 19% mainly driven by a less favorable product mix and lower selling prices. D&RF revenues decreased by 16.50%, driven by lower average selling prices of approximately 43%, due to less favorable product mix and lower selling prices, partially offset by higher volumes of approximately 26%.

We believe Gross Margin and Operating Margin provide useful information as they measure the profitability of our operations. Gross Margin is defined as gross profit divided by total revenues. Gross profit is calculated as total revenues minus cost of sales. Operating Margin is defined as operating profit divided by total revenues. Operating profit is calculated as gross profit net of operating expenses, other income and other expenses.

Our 2024 Gross Margin decreased 880 basis points to 37.1% from 45.9% in 2023, mainly due to product mix and, to a lesser extent, to sales price and higher unused capacity charges.

Operating Margin was 12.7% in 2024, a decrease of 1,400 bps from 26.7% in 2023. Operating profit in 2024 decreased to \$1,688 million compared to \$4,610 million in 2023 mainly driven by the combining effect of lower revenues and gross margin profitability.

Our operating expenses, comprised of aggregated SG&A and R&D expenses, amounted to \$3,375 million in 2024, substantially flat from \$3,388 million in the prior year. Other income and expenses, net, was \$140 million in 2024 compared to \$67 million in 2023, increasing mainly due to lower start-up costs and higher income from public funding.

Combined finance income and costs resulted in a net income of \$616 million, compared to a net loss of \$95 million in 2023, and reflect in both years the IFRS accounting of our convertible bonds. The 2024 amount included a gain of \$477 million for the fair value adjustment of the embedded bondholders' conversion options on outstanding convertible bonds (compared to a loss of \$249 million in 2023). The main driver of the gain is the decrease in the stock price, including dividend yield.

Full year 2024 net profit was \$1,987 million or \$2.19 diluted earnings per share, compared to net profit of \$3,985 million, or \$4.38 diluted earnings per share for the full year 2023.

Net Capex (non-GAAP measure) was \$2,531 million for the year 2024 compared to \$4,111 million for the year 2023. The main driver of our capital expenditures is our efforts in investing in our SiC production facilities, in our back-end manufacturing capacity and our 300mm wafer front-end facilities.

During 2024, our net cash decreased by \$940 million, with net cash from operating activities reaching \$3.34 billion. During 2024, we paid \$359 million for the repurchase of ordinary shares, \$288 million of cash dividends to our shareholders, and \$203 million for long-term financial debt repayment, partially offset by \$300 million proceeds from the second tranche under our existing €600 million credit facility with the European Investment Bank (“EIB”).

Our Net Capex, Free Cash Flow, Net Financial Position and Adjusted Financial Position are non-GAAP measures and are further described in Section 3.2.5. (*Report of the Managing Board - Business overview and performance - Liquidity and financial position*).

3.2.2. Business overview

We are a global semiconductor company that designs, develops, manufactures and markets a broad range of products used in a wide variety of applications for the four end-markets we address: Automotive, Industrial, Personal Electronics and Communications Equipment, Computers and Peripherals (each as defined below). For the Automotive and Industrial markets we address a wide customer base, particularly in Industrial, with a broad and deep product portfolio. In Personal Electronics and in Communications Equipment, Computers and Peripherals we have a selective approach both in terms of the customers we serve, as well as in the technologies and products we offer, while leveraging our broad portfolio to address high-volume applications.

Our diverse product portfolio includes discrete and general purpose components, ASICs, full-custom devices and semi-custom devices and ASSPs for analog, digital and mixed-signal applications. It benefits from a unique, strong foundation of proprietary and differentiated leading-edge technologies. We use all of the prevalent function-oriented process technologies, including CMOS, bipolar and non-volatile memory technologies. In addition, by combining basic processes, we have developed advanced systems-oriented technologies that enable us to produce differentiated and application-specific products, including FD-SOI technology offering superior performance and power efficiency compared to bulk CMOS, Bi-CMOS and RF-SOI for mixed-signal and high-frequency applications, as well as a combination of BCD, VIPower, and intelligent integrated gallium-nitride technologies for smart power applications, power MOSFET, SiC) and GaN for high-efficiency systems, MEMS technologies for sensors and actuators, embedded memory technologies for our microcontrollers and differentiated optical sensing technologies for our optical sensing solutions.

Further information on our business model is included in Section 2 (*Corporate Overview*) above and Sections 3.2.2.1. (*Strategy and objectives*) et seq. below.

3.2.2.1. Strategy and objectives

We are 50,000 creators and makers of semiconductor technologies mastering the semiconductor supply chain with state-of-the-art manufacturing facilities. As an IDM, we work with more than 200,000 customers and thousands of partners to design and build products, solutions, and ecosystems that address their challenges and opportunities. Our technologies enable smarter mobility, more efficient power and energy management, and the wide-scale deployment of cloud-connected autonomous things.

Our strategy focuses on sustainable long-term value creation for the Company and its affiliated enterprises and takes into account the short-, medium- and longer-term evolution of the markets we serve and the environment and opportunities we see. It stems from key long-term trends in electronic systems. These key trends are: (i) smart mobility, where we provide innovative solutions to help car manufacturers make driving safer, greener and more connected; (ii) power and energy, where our technology and solutions enable industries to increase energy efficiency and support the use of renewable energy; and (iii) cloud-connected autonomous things, which transform our lives and the objects we use with smart, connected devices for personal, business and industrial applications.

Our strong focus, as a broad range player, is on high-growth applications such as, (i) in Automotive, electrified power train, ADAS, legacy systems; (ii) in Industrial, with energy management at large, battery-operated tools, automation and robotics; as well as, more selectively, (iii) on premium personal electronics devices, data center power management and connectivity, and low-earth-orbit satellite communications.

Our global IDM operational model, with a wide range of capabilities in proprietary and innovative technology and IP design, product and solution development, and with advanced manufacturing - both in-house and with selected partners - providing us with a strong competitive advantage and supply chain resilience for our customers.

Our value proposition for stakeholders is focused on sustainable and profitable growth, providing differentiating enablers to customers and a strong commitment to sustainability. We are on track to be carbon neutral in all direct and indirect emissions (scopes 1 and 2), product transportation, business travel, and employee commuting emissions (our scope 3 focus), and to achieve our 100% renewable energy sourcing goal by the end of 2027.

3.2.2.2. Employees

The tables below set forth the breakdown of employees by geographic area and category of main activity for the past two years.

	2024	2023
France	11,528	11,958
Italy	12,745	12,561
Rest of Europe	1,169	1,198
Americas	821	828
Mediterranean (Malta, Morocco, Tunisia)	5,374	5,923
Asia	17,965	18,855
Total	49,602	51,323

	2024	2023
Research and Development	9,257	9,426
Marketing and Sales	2,698	2,671
Manufacturing	31,133	32,822
Administration and General Services	3,323	3,038
Product Group Functions	3,192	3,366
Total	49,602	51,323

Our future success will partly depend on our ability to continue to attract, retain and motivate highly qualified technical, marketing, engineering and management personnel, as well as on our ability to timely adapt the size and/or profile of our personnel to changing industry needs. Unions are represented at almost all of our manufacturing facilities and at several of our R&D sites. We use temporary employees if required during production spikes and, in Europe, during summer vacation. We have not experienced any significant strikes or work stoppages in recent years.

More detailed information on our employees can be found in Section 3.4.4.1. (*Social - Own workforce - Characteristics of the undertaking's employees*). It should be noted that the number of employees presented in the tables above differ from the number of employees included in Section 3.4.4.1., due to a different headcount definition and related scope.

3.2.2.3. Alliances with Customers and Industry Partnerships

We believe that customer alliances and industry partnerships are critical to our success in the semiconductor market. Customer alliances provide us with valuable systems and application know-how and access to markets for key products, while enabling our customers to gain access to our process technologies and manufacturing infrastructure. We are actively working to expand the number of our customer alliances, targeting key global original equipment manufacturers ("OEMs") as well as emerging, innovative customers and partners around the globe.

From time to time we collaborate with other semiconductor industry companies, research organizations, universities, customers, experts and suppliers to further our R&D efforts. Such collaboration provides us with a number of important benefits, including acquisition of technical know-how, access to additional production capacities, sharing of costs and reductions in our own capital requirements.

3.2.2.4. Customers and Applications

We design, develop, manufacture and market thousands of products which we sell to over 200,000 customers. We emphasize a broad and balanced product portfolio, in the applications and regional markets we serve, which helps foster closer, strategic relationships with customers. Our major customers include (in alphabetical order) Apple, Bosch, Continental, Denso Hyundai Motor, Mobileye, Samsung, SpaceX, Tesla and Vitesco. This broad product breadth provides opportunities to enable application solutions and to supply such customers' requirements for all their product and technology needs. We also sell our products through our distribution channel.

In Automotive (as defined below), we have identified a significant evolution of the relationship with customers. Historically, semiconductor companies addressed the needs of carmakers mostly through tier 1 and/or tier 2 automotive industry suppliers with whom we work closely. In recent years there has been an accelerated transformation of the automotive industry driven by the electrification and the digitalization of vehicles, significantly increasing the amount and complexity of semiconductor products in vehicles. As a result, and following further from the supply chain challenges which arose during and after the COVID-19 pandemic, carmakers are taking a more direct role in the decision making and control of both the semiconductor strategy and supply for their vehicles. Carmakers now have a more direct relationship with companies such as ours, notably playing a more active role in defining the specific solutions they require, as well as in certain instances engaging in direct co-operation agreements. We are committed to playing a major role in these new business models and we see multiple opportunities for co-operation with carmakers in this area, while also continuing to build on our co-operation with tier 1 and tier 2 automotive industry suppliers.

3.2.2.5. Sales, Marketing and Distribution

Our sales and marketing is organized by a combination of regional and key account coverage with the primary objective of accelerating sales growth and gaining market share. Emphasis is placed on strengthening the development of our global and major local accounts; boosting demand creation through an enhanced focus on geographical and key account coverage with strong technical and application expertise, supported in the mass market by our distribution channel and local initiatives; and establishing regional sales and marketing teams that are fully aligned with our end-markets, each as defined below: Automotive, Industrial (split into two verticals: a power and energy vertical; and a smart industrial IoT / automation vertical), Personal Electronics and Communications Equipment, Computers and Peripherals.

We have four regional sales organizations reporting to a global head of sales and marketing: Americas, APeC, China and EMEA. Our regional sales organizations have a similar structure to enhance global coordination and go-to-market activities. The sales and marketing teams are strongly focused on profitable revenue growth and business performance as well as on fostering demand creation, expanding

the customer base, maximizing market share, developing new product-roadmaps and providing the best technical and application support in the field for our customers. The sales and marketing activities are supported by sales engineers, system marketing, product marketing, application labs, competence centers, field application engineers and quality engineers.

In the first quarter of 2024, we announced that we will complement the existing sales and marketing organization (the "Sales and Marketing" organization) by implementing a new SM&A organization, offering customers end-to-end system solutions based on our product and technology portfolio, covering the following four end markets:

- automotive end-market ("Automotive");
- industrial end-market ("Industrial"), split into two verticals: a power and energy vertical and a smart industrial IoT / automation vertical;
- personal electronics end-market ("Personal Electronics"); and
- communications equipment, computers and peripherals end-market ("Communications Equipment, Computers and Peripherals").

The regional Sales and Marketing organization remained unchanged.

We engage distributors and sales representatives to distribute and promote our products around the world. Typically, distributors handle a wide variety of products, including those that compete with ours. Our distributors have a dual role, in that they assist in fulfilling the demand of our customers by servicing their orders, while also supporting the creation of product demand and business development. Most of our sales to distributors are made under specific agreements allowing for price protection and stock rotation for unsold merchandise. Sales representatives, on the other hand, generally do not offer products that compete directly with our products, but may carry complementary items manufactured by others.

At the request of certain customers, we also sell and deliver our products to electronics manufacturing services companies, which, on a contractual basis with our customers, incorporate our products into the application specific products they manufacture for our customers. We also sell products to ODMs. ODMs manufacture products for our customers much like electronics manufacturing services companies do, but they also design applications for our customers, and in doing so themselves select the products and suppliers that they wish to purchase from.

In furtherance of our strong commitment to quality, our sales organizations include personnel dedicated to close monitoring and resolution of quality-related issues.

3.2.2.6. Research and Development

We believe that market driven R&D based on leading-edge products and technologies is critical to our success. We devote significant effort to R&D because we believe such investment can be leveraged into competitive advantages: about 20% of our employees work in R&D on product design/development and technology and, in 2024, we spent approximately 13.0% of our total revenues on R&D.

New developments in semiconductor technology can make end products significantly cheaper, smaller, faster, more reliable and embedded than their predecessors, with differentiated functionalities. They can enable significant value creation opportunities with their timely appearance on the market. Our innovations in semiconductor technology as well as in hardware and software contribute to the creation of successful products that generate value for us and our customers. Our complete design platforms, including a large selection of IP and silicon-proven models and design rules, enable the fast development of products designed to meet customer expectations in terms of reliability, quality, competitiveness in price and time-to-market. Through our R&D efforts, we contribute to making our customers' products more efficient, more appealing, more reliable and safer.

Our technology R&D strategy is based on the development of differentiated technologies, allowing for a unique offer in terms of new products and enabling new applications opportunities. We draw on a rich pool of fabrication technologies for chips and products, including advanced digital CMOS on FD-SOI, embedded non-volatile memories, analog and mixed-signal, optical sensing, integrated photonics, MEMS, BCD for smart power, power transistors and diodes, power SiC and GaN processes, Bi-CMOS, and SiPho. This is well embedded in our strong packaging technologies portfolio, such as high pin count BGA, wafer level packaging, panel-level packaging, highly integrated sensor packages and leadframe package power products. We combine both front-end and back-end manufacturing and technology R&D under the same organization to ensure a smooth flow of information between our R&D and manufacturing organizations. We leverage significant synergies and shared activities between our product groups to cross-fertilize them. We also use silicon foundries and OSATs

We have advanced R&D and innovation centers which offer us a significant advantage in quickly and cost effectively introducing products. Furthermore, we have established a strong culture of partnerships and through the years have created a network of strategic collaborations with key customers, suppliers, competitors, and leading universities and research institutes around the world. We also play leadership roles in numerous projects running under the "Information Society Technologies" programs of the EU. We also participate in certain collaborative R&D and innovation programs established by the EU Commission, individual countries and local authorities in Europe (primarily in France and Italy) and in Singapore. We currently own over 21,000 active and pending patents worldwide.

The total amount of our R&D expenses was \$1,726 million and \$1,750 million in 2024 and 2023, respectively, while the total amount of R&D expenses capitalized amounted to \$354 million and \$361 million in 2024 and 2023, respectively.

3.2.2.7. Property, Plants and Equipment

We are an IDM with the ability to control and optimize the value chain, from semiconductor process development, chip design, testing and validation, wafer fabrication, to assembly, testing, and delivery to our customers. At our Company, manufacturing is based on our owned and operated facilities in EMEA and in Asia, complemented by outsourcing in both front-end and back-end processes. This enables us to provide customers with an independent, flexible and robust manufacturing and supply chain, which aids in our success. In addition, our proprietary semiconductor process technologies highlighted above enable product differentiation. We believe that the combination of these two aspects represent a differentiating factor for our Company as compared to fabless semiconductor companies and semiconductor foundries.

We currently operate fourteen main manufacturing sites around the world. Please refer to Appendix 11.5 for a list of our main manufacturing sites.

As of December 31, 2024, our front-end facilities had a total maximum capacity of approximately 145,000 wafer starts per week (200mm equivalent). The number of wafer starts per week varies from facility to facility and from period to period as a result of changes in product mix.

We own all of our manufacturing facilities, but certain facilities (Muar, Malaysia; Shenzhen, China; Kirkop, Malta; Toa Payoh and Ang Mo Kio, Singapore) are built on land subject to long-term leases.

We have historically subcontracted a portion of total manufacturing volumes to external suppliers. In 2024, we subcontracted approximately 11% of the value of our total silicon production to external foundries. Our plan is to continue sourcing silicon from external foundries and OSATs to give us flexibility in supporting our growth.

As of December 31, 2024, we had approximately \$1,411 million in outstanding orders for purchases of equipment (certain of which are subject to cancellation or amendment in accordance with their terms) and other assets for delivery in 2025. In 2024, our capital expenditure payments (defined as payments for purchases of tangible assets), net of proceeds from sales, capital grants and other contributions, was \$2,642 million compared to \$4,111 million in 2023. In the 2022-2024 period the ratio of capital expenditure

payments, net of proceeds from sales, capital grants and other contributions to total revenues was about 22%.

3.2.2.8. Intellectual Property

Our success depends in part on our ability to obtain patents, licenses and other IP rights to protect our proprietary technologies and processes. Intellectual property ("IP") rights that apply to our various products include patents, copyrights, trade secrets, trademarks and mask work rights. We currently own over 21,000 active and pending patents worldwide.

We believe that our IP represents valuable assets. We rely on various IP laws, confidentiality procedures and contractual provisions to protect our IP assets and enforce our IP rights. To optimize the value of our IP assets, we have engaged in licensing our design technology and other IP, including patents, when consistent with our competitive position and our customers' interests. We have also entered into broad-scope cross-licenses and other agreements which enable us to design, manufacture and sell semiconductor products using the IP rights of third parties and/or operating within the scope of IP rights owned by third parties.

From time to time, we are involved in IP litigation and infringement claims. Regardless of the validity or the successful assertion of such claims, we may incur significant costs with respect to the defense thereof, which could have a material adverse effect on our results of operations, cash flow or financial condition.

3.2.2.9. Backlog

Our sales are made primarily pursuant to standard purchase orders that are generally booked from one to eighteen months in advance of delivery. Quantities actually purchased by customers, as well as prices, are subject to variations between booking and delivery and, in some cases, to cancellation due to changes in customer needs or industry conditions. During periods of economic slowdown and/or industry overcapacity and/or declining selling prices, customer orders are not generally made far in advance of the scheduled shipment date. Such reduced lead time can diminish management's ability to forecast production levels and revenues. When the economy rebounds, our customers may strongly increase their demands, which can result in capacity constraints due to a time lag when matching manufacturing capacity with such demand.

In addition, our sales are affected by seasonality, with the first half generally showing lowest revenue levels in the year, and the third or fourth quarter historically generating higher amounts of revenues partly as a result of the seasonal dynamics for smartphone applications dynamics.

We also sell certain products to key customers pursuant to frame contracts. Frame contracts are annual contracts with customers setting forth quantities and prices on specific products that may be ordered in the future. These contracts allow us to schedule production capacity in advance and allow customers to manage their inventory levels consistent with just-in-time principles while shortening the cycle times required to produce ordered products. Orders under frame contracts are also subject to a high degree of volatility, because they reflect expected market conditions which may or may not materialize. Thus, they are subject to risks of price reduction, order cancellation and modifications as to quantities actually ordered resulting in inventory build-ups.

Furthermore, developing industry trends, including customers' use of outsourcing and their deployment of new and revised supply chain models, may reduce our ability to forecast changes in customer demand and may increase our financial requirements in terms of capital expenditures and inventory levels.

We entered 2024 with a backlog lower than we had entering 2023. For 2025, we entered the year with a backlog lower than what we had entering 2024.

3.2.2.10. Competition

Markets for our products are intensely competitive. We compete with major international semiconductor companies and while only a few companies compete with us in all of our product lines, we face significant competition from each of them. Smaller niche companies are also increasing their participation in the semiconductor market, and semiconductor foundry companies have expanded significantly, particularly in Asia. Competitors include manufacturers of standard semiconductor devices, ASICs and fully customized ICs, including both chip and board-level products, as well as customers who develop their own IC products and foundry operations. Some of our competitors are also our customers or suppliers. We compete in different product lines to various degrees on the basis of price, technical performance, product features, product system compatibility, customized design, availability, quality and sales and technical support. In particular, standard products may involve greater risk of competitive pricing, inventory imbalances and severe market fluctuations than differentiated products. Our ability to compete successfully depends on factors both within and outside our control, including successful and timely development of new products and manufacturing processes, product performance and quality, manufacturing yields and product availability, customer service, pricing, industry trends and general economic trends.

The semiconductor industry is characterized by the high costs associated with developing marketable products and manufacturing technologies as well as high levels of investment in production capabilities. As a result, the semiconductor industry has experienced, and is expected to continue to experience, significant vertical and horizontal consolidation among our suppliers, competitors and customers, which could lead to erosion of our market share, impact our capacity to compete and require us to restructure our operations.

3.2.2.11. Public Funding

We receive public funding mainly from EU member states (including France, Italy and Malta) and China. Such funding is generally provided to encourage R&D and innovation activities, enhance industrialization, and contribute to Capex for certain strategic programs, as well as national, regional and local economic development. Our funding programs are classified under four general categories: funding for research, development and innovation ("RDI") activities, funding for FID activities and capital investment for pilot lines, and tax credits. We benefit from tax credits for R&D activities in several countries which are generally available to all companies.

The main R&D, RDI and FID programs in which we are involved include: (i) IPCEI which combines R&D, RDI as well as FID activities; (ii) Chips JU/ECS program, formerly Key Digital Technologies Initiative, which combines all electronics related R&D activities and is operated by a joint undertaking formed by the EU, certain member states and industry; (iii) EU R&D projects within Horizon Europe (the EU's research and innovation framework); and (iv) national or regional programs for R&D and for industrialization in the electronics industries involving many companies and laboratories.

In December 2018, the European Commission announced the approval of the IPCEI on Microelectronics ("IPCEI ME"), a pan-European project initiated to foster research and innovation in microelectronics to be funded by Germany, France, Italy, the U.K. and Austria.

In our combined role as beneficiary of the IPCEI ME, we have recognized grants of €266.1 million for the period 2018-2022 in France (locally referenced as Nano2022) which was linked to technical objectives and associated achievements, and have been allocated approximately €789 million for the period 2018-2024 in Italy. The IPCEI ME program significantly strengthened our leadership in key technologies. It has contributed to anticipating, accelerating, and securing our technological developments. The IPCEI ME program also has wide ranging, pan-European benefits on the microelectronics ecosystem from education to downstream industries.

In December 2021, we took part in a new IPCEI program, titled IPCEI on Microelectronics and Communication Technologies (“IPCEI ME/CT”). This new pan-European project was initiated to foster research and innovation and kick-start the first industrialization of microelectronics. It involves ST in France (2022-2026), Italy (2023-2027) and Malta (2021-2026), as well as around 65 other companies across 14 European countries. In 2024 we recognized grants of €86 million and €157 million related to our respective participations in IPCEI ME and IPCEI ME/CT in Italy, €113.6 million related to our participation in IPCEI ME/CT, Chips JU/ECS and other national and European programs in France and \$18 million related to our participation in IPCEI ME/CT in Malta.

On October 4, 2022, the European Commission approved, under EU State Aid rules, a support up to €292.5 million through the Italian Recovery and Resilience Plan for the construction of a new integrated SiC substrate manufacturing facility in Catania, Italy. In 2024 we recognized grants of €17 million related to this project. On April 28, 2023, the European Commission approved, under EU State Aid rules, a French aid measure to support the Company and GlobalFoundries in the construction and operation of a front-end semiconductor production facility in Crolles, France. This project represents an overall projected cost of €7.5 billion for capital expenditure, maintenance and ancillary costs. The new facility will benefit from significant financial support of up to around €2.9 billion from France for GlobalFoundries and ST. In 2024 we received around €309.8 million in cash and recognized grants of €41.3 million from this program in Crolles, France.

On May 31, 2024, the European Commission approved, under the EU State Aid rules, an Italian aid measure to support the Company in the construction and operation of an integrated chip manufacturing plant for SiC power devices in Catania, Italy. The aid will take the form of a €2 billion direct grant to ST to support its planned investment of €5 billion in capital expenditure. The measure will strengthen Europe's security of supply, resilience and digital sovereignty in semiconductor technologies. The measure will also contribute to achieving the digital and green transitions.

These projects are “first-of-a-kind” facilities in Europe in line with the ambitions and objectives of the European Chips Act.

In 2023, the Company and Sanan Optoelectronics jointly created SANAN, STMicroelectronics Co. Ltd. (“Sanan ST JV”), for high-volume 200mm SiC device manufacturing in China. This joint venture will make SiC devices exclusively for us, using our proprietary SiC manufacturing process technology, and will serve as a dedicated foundry to support the demand of our Chinese customers. The total amount for the full buildout of the joint venture's future operations is expected to be about \$3.2 billion, including capital expenditures of about \$2.4 billion over the next 5 years, for which Sanan ST JV receives local government support through a funding program with Chinese regional authorities.

3.2.2.12. Suppliers

We use three primary critical types of suppliers in our business: (i) equipment suppliers, (ii) material suppliers and (iii) external silicon foundries and test and packaging subcontractors. We also purchase third-party licensed technology from a limited number of providers.

In the front-end process, we use steppers, scanners, tracking equipment, strippers, chemo-mechanical polishing equipment, cleaners, inspection equipment, etchers, physical and chemical vapor-deposition equipment, implanters, furnaces, testers, probers and other specialized equipment. The manufacturing tools that we use in the back-end process include bonders, burn-in ovens, testers and other specialized equipment. The quality and technology of equipment used in the IC manufacturing process defines the limits of our technology. Demand for increasingly smaller chip structures means that semiconductor producers must quickly incorporate the latest advances in process technology to remain competitive. Advances in process technology cannot occur without commensurate advances in equipment technology, and equipment costs tend to increase as the equipment becomes more sophisticated.

Our manufacturing processes consume significant amounts of energy and use many materials, including silicon and SiC, GaN and glass wafers, lead frames, mold compound, ceramic packages and chemicals, gases and water. The prices of energy, such as electricity and natural gas, and many of these materials are volatile due to the specificity of the market, and other factors including geopolitics. We have therefore adopted a “multiple sourcing strategy” designed to minimize the impact of price increases. The same strategy applies to supplies for the materials used by us to avoid potential material disruption of essential materials and to ensure the continuity of energy supply. Our “multiple sourcing strategy”, our financial risk monitoring as well as the robustness of our supply chain and strong partnership with suppliers are intended to mitigate these risks.

Finally, we also use external subcontractors to outsource wafer manufacturing and assembly and testing of finished products.

3.2.3. Key announcements

On March 19, 2025, we announced the resignation of Mr. Maurizio Tamagnini from our Supervisory board, effective immediately.

On January 30, 2025, we announced that our Supervisory Board has agreed to propose for shareholders' approval at the Company's 2025 AGM, the appointment of Werner Lieberherr to the Supervisory Board of the Company, in replacement of Janet Davidson, whose mandate will expire at the end of the 2025 AGM.

On January 30, 2025, we announced the start of the company-wide program to resize ST's global cost base. For each of the concerned countries, the start of the program will take place in accordance with applicable regulations.

On January 28, 2025, we announced to have signed a physical power purchase agreement with TotalEnergies, which will supply renewable electricity to STMicroelectronics sites in France. This 15-year contract, started in January 2025, represents an overall volume of 1.5 TWh.

On December 10, 2024, we announced a new NPU-accelerated STM32 microcontrollers series, STM32N6, with new machine-learning capabilities make it possible to run computer vision, audio processing, sound analysis and more consumer and industrial applications at the edge.

On December 3, 2024, we announced a multi-year agreement with the Renault group on the supply of SiC power modules for Ampere, and a collaboration on powerbox and cooling systems for the inverter.

On November 20, 2024, we outlined 2027-2028 financial model and path towards 2030 ambition. Within the framework of an unchanged strategy, ST reiterated its \$20 billion plus revenue ambition and associated financial model, now expected to be reached by 2030. ST also set an intermediate financial model with revenues expected around \$18 billion with an operating margin within a 22% to 24% range in 2027-2028.

On November 7, 2024, we announced the signature of a power purchase agreement with ENGIE, which will supply renewable electricity to STMicroelectronics sites in Malaysia. This 21-year contract, starting in 2025, represents an annual volume of 50 GWh.

On October 31, 2024, we announced the launch of a new company-wide program to reshape our manufacturing footprint accelerating our wafer fab capacity to 300mm silicon (Agrate, Italy, and Crolles, France) and 200mm silicon carbide (Catania, Italy) and resizing our global cost base. This program should result in strengthening our capability to grow our revenues with an improved operating efficiency resulting in annual cost savings in the high triple-digit million-dollar range exiting 2027. At a later stage, ST announced that, specifically in terms of operating expenses (SG&A and R&D), it expects annual cost savings totaling \$300 to 360 million, exiting 2027, compared to the cost base of 2024.

On October 31, 2024, we announced that since October 1, 2024, Lorenzo Grandi, President and Chief Financial Officer, has taken additional responsibilities, with a perimeter now also covering supply chain, corporate development and integrated external communication in addition to finance, global procurement,

digital transformation and information technology, enterprise risk management and resilience. ST's Executive Committee remains unchanged and continues to report to Jean-Marc Chery, ST President and Chief Executive Officer.

On October 1, 2024, we announced a new strategic collaboration with Qualcomm for the next generation of industrial and consumer IoT solutions augmented by edge AI.

On September 24, 2024, we unveiled our fourth generation STPOWER SiC MOSFET technology.

On August 21, 2024, we published our IFRS 2024 Semi Annual Accounts for the six-month period ended June 29, 2024 on our website and filed them with the Netherlands Authority for the Financial Markets (*Authoriteit Financiële Markten*).

On June 4, we announced a long-term supply agreement for third-generation SiC MOSFETs with Geely Auto for powertrain efficiency, as well as a joint innovation lab to support the development of smart, electrified and connected cars.

On May 31, 2024, we announced our plan to build a new fully integrated SiC facility in Catania, Italy for the mass production of 200mm SiC power devices and modules, as well as test and packaging, to be built in Catania, Italy. The facility is a projected €5 billion multi-year investment program including €2 billion support provided by the state of Italy in the framework of the EU Chips Act.

On May 22, 2024, we held our AGM, in Amsterdam, the Netherlands. The proposed resolutions, all approved by the shareholders were:

- the adoption of the Company's statutory annual accounts for the year ended December 31, 2023, prepared in accordance with IFRS and filed with the Netherlands Authority for the Financial Markets on March 21, 2024;
- the distribution of a cash dividend of \$0.36 per outstanding share of the Company's common stock to be distributed in quarterly installments of \$0.09 in each of the second, third and fourth quarters of 2024 and first quarter of 2025 to shareholders of record in the month of each quarterly payment;
- the amendment to the Company's Articles of Association;
- the adoption of the remuneration policy for the Supervisory Board;
- the adoption of the remuneration policy for the Managing Board;
- the reappointment of Mr. Jean-Marc Chery as member and chairman of the Managing Board for a three-year term to expire at the end of the 2027 AGM;
- the approval of the stock-based portion of the compensation of the President and Chief Executive Officer;
- the appointment of Mr. Lorenzo Grandi as member of the Managing Board for a three-year term to expire at the end of the 2027 AGM;
- the approval of the stock-based portion of the compensation of the Chief Financial Officer;
- the approval of a new 3-year unvested stock award plan for management and key employees;
- the reappointment of Ernst & Young as external auditor for the 2024 and 2025 financial years;
- the reappointment of Mr. Nicolas Dufourcq, as member of the Supervisory Board, for a three-year term to expire at the end of the 2027 AGM;
- the reappointment of Ms. Janet Davidson, as member of the Supervisory Board, for a one-year term to expire at the end of the 2025 AGM;
- the appointment of Mr. Pascal Daloz, as member of the Supervisory Board, for a three-year term expiring at the 2027 AGM, in replacement of Mr. Yann Delabrière whose mandate expired at the end of the 2024 AGM;

- the authorization to the Managing Board, until the conclusion of the 2025 AGM, to repurchase shares, subject to the approval of the Supervisory Board;
- the delegation to the Supervisory Board of the authority to issue new common shares, to grant rights to subscribe for such shares, and to limit and/or exclude existing shareholders' pre-emptive rights on common shares, until the end of the 2025 AGM;
- the discharge of the member of the Managing Board; and
- the discharge of the members of the Supervisory Board.

On April 22, 2024, we announced the expansion of the existing multi-year, long-term 150mm SiC substrate wafers supply agreement with SiCrystal, a ROHM group company

On April 16, 2024, we published our 2024 sustainability report detailing 2023 performance, strategy and ongoing action plans.

On April 11, 2024, we announced the signature of a power purchase agreement with Centrica Energy, which will supply renewable electricity to STMicroelectronics sites in Italy. This 10-year contract, starting in 2025, represents an annual volume of 61 GWh.

On March 19, 2024, we announced our first STM32 microcontroller based on our new 18nm FD-SOI with embedded phase change memory technology, delivering a leap in performance and power consumption.

3.2.4. Financial outlook: Capital investment

Our policy is to modulate our capital spending according to the evolution of the semiconductor market. For 2025, we plan to invest between \$2.0 to \$2.3 billion in Net Capex (non-GAAP measure). Net Capex (non-GAAP measure) is further described in Section 3.2.5 (*Report of the Managing Board - Business Overview and Performance - Liquidity and financial position*).

Our Net Capex (non-GAAP measure) will be largely driven by our manufacturing reshaping initiatives (accelerated transition towards 300mm silicon and 200mm silicon carbide). In particular:

- in Catania, Italy, the new high-volume fully vertically integrated 200mm silicon carbide manufacturing facility for power devices and modules, as well as test and packaging;
- in Chongqing, China, the new 200mm silicon carbide device manufacturing joint venture with Sanan Optoelectronics;
- in Crolles, France, digital 300mm;
- in Agrate, Italy, the ramp-up of the 300mm wafer fab to support analog mixed signal, smart power HCMOS and VIPower technologies; and
- capital investments in back-end facilities, which in 2025 will be largely focused on: (i) capacity growth on certain package families, including power loss protection / direct copper interconnect technology (ii) the new generation of intelligent power modules for automotive and industrial applications, and (iii) selected investments for the modernization and expansion assembly and test operations.

The remaining part of our Net Capex (non-GAAP measure) covers the overall maintenance and efficiency improvements of our manufacturing operations and infrastructure, R&D activities, laboratories as well as the execution of our carbon neutrality programs.

We will continue to invest to support revenues growth and new products introduction, taking into consideration factors such as trends in the semiconductor industry, capacity utilization and our goal to become carbon neutral in all direct and indirect emissions (scopes 1 and 2), product transportation, business travel, and employee commuting emissions (our scope 3 focus), and to achieve our 100% renewable electricity sourcing goal by the end of 2027. We expect to need significant financial resources in the coming years for capital expenditures and for our investments in manufacturing and R&D. We plan

to fund our capital requirements with cash provided by operating activities, available funds and support from third parties, and may have recourse to borrowings under available credit lines and, to the extent necessary or attractive based on market conditions prevailing at the time, the issuance of debt, convertible bonds or additional equity securities. A substantial deterioration of our economic results, and consequently of our profitability, could generate a deterioration of the cash generated by our operating activities. Therefore, there can be no assurance that, in future periods, we will generate the same level of cash as in prior years to fund our capital expenditure plans for expanding/upgrading our production facilities, our working capital requirements, our R&D and manufacturing costs.

We believe that we have the financial resources needed to meet our currently projected business requirements for the next twelve months, including capital expenditures for our manufacturing activities, working capital requirements, approved dividend payments, share buy-backs as part of our current repurchase program and the repayment of our debt in line with maturity dates.

3.2.5. Liquidity and financial position

We maintain an adequate cash position and a low debt-to-equity ratio to provide us with adequate financial flexibility. As in the past, our cash management policy is to finance our investment needs mainly with net cash generated from operating activities.

During 2024, our net cash decreased by \$940 million. The components of our net cash variation and the comparable period are set forth below:

In millions of U.S. dollars	2024	2023
Net cash from operating activities	3,342	6,366
Net cash used in investing activities	(4,096)	(5,975)
Net cash used in financing activities	(178)	(432)
Effect of change in exchange rates	(8)	5
Net cash decrease	(940)	(36)

Net cash from operating activities

Net cash from operating activities is the sum of (i) net profit adjusted for non-cash items and (ii) changes in net working capital. The net cash from operating activities in 2024 was \$3,342 million, decreasing compared to \$6,366 million in the prior year, mainly due to lower net profit.

Net cash used in investing activities

Investing activities used \$4,096 million of cash in 2024, decreasing compared to \$5,975 million cash used in 2023, mainly due to lower payments for purchase of tangible assets, net of proceeds from sales of tangible assets, capital grants and other contributions, which totaled \$2,642 million in 2024, higher proceeds from marketable securities for a total of \$2,251 million, partially offset by higher purchases of marketable securities for a total of \$2,980 million, and lower net investments in short-term deposits of \$225 million. Capital investments for the year 2024 included (i) investments in advanced wafer fabs, such as the 300mm fab in Crolles, France and the 300mm fab in Agrate, Italy; (ii) SiC activities, primarily in Catania, Italy, Singapore and China; and (iii) in selected programs of capacity growth in other front-end and back-end activities.

Net cash used in financing activities

Net cash used in financing activities was \$178 million for 2024, compared to \$432 million in 2023, and consisted mainly of \$359 million repurchase of common stock, \$288 million of dividends paid to our shareholders and \$274 million repayment of financial debt including payment for lease liabilities, partially offset by \$300 million of proceeds from a new drawdown of the second tranche under our existing €600 million credit facility with the EIB and \$344 million of proceeds from advances on capital grants for which capital expenditures have not been incurred yet.

Net Capex (non-GAAP measure)

Our Net Capex (non-GAAP measure) is derived from our U.S. GAAP Consolidated Statements of Cash Flows, which differs from our Consolidated Statements of Cash Flows under IFRS. Our Net Capex (non-GAAP measure) takes into consideration the effect of advances from capital grants received on prior periods allocated to property, plant and equipment in the reporting period. Net Capex is reported as part of our Free Cash Flow (non-GAAP measure).

Net Capex, a non-GAAP measure, is defined as (i) payment for purchase of tangible assets, as reported plus (ii) proceeds from sale of tangible assets, as reported plus (iii) proceeds from capital grants and other contributions, as reported, plus (iv) advances from capital grants allocated to property, plant and equipment in the reporting period.

We believe Net Capex provides useful information for investors and management because annual capital expenditures budget includes the effect of capital grants. Our definition of Net Capex may differ from definitions used by other companies.

Our Net Capex (non-GAAP measure) is derived from our U.S. GAAP Consolidated Statements of Cash Flows; a reconciliation from the Consolidated Statements of Cash Flows as reported under IFRS is provided in the table below:

In millions of U.S. dollars	2024	2023
Payment for purchase of tangible assets, as reported	(3,088)	(4,439)
Proceeds from sale of tangible assets, as reported	5	8
Proceeds from capital grants and other contributions, as reported	441	320
Advances from capital grants allocated to property, plant and equipment	111	—
Net Capex (non-GAAP measure)	(2,531)	(4,111)

Net Capex decreased by \$1,580 million, from \$4,111 million in 2023 to \$2,531 million in 2024, primarily due to lower payments for purchases of tangible assets.

Free cash flow (non-GAAP measure)

Our Free Cash Flow (non-GAAP measure) is derived from our U.S. GAAP Consolidated Statements of Cash Flows, which differs from our Consolidated Statements of Cash Flows under IFRS. Free Cash Flow, a non-GAAP measure, is defined as (i) net cash from operating activities plus, (ii) net Capex plus (iii) payment for purchase (and proceeds from sale) of intangible and financial assets and (iv) net cash paid for business acquisitions, if any.

We believe Free Cash Flow, a non-GAAP measure, provides useful information for investors and management because it measures our capacity to generate cash from our operating and investing activities to sustain our operations.

Free Cash Flow is a non-GAAP measure and does not represent total cash flow since it does not include the cash flows from, or used in, financing activities. Free Cash Flow reconciles with the total cash flow

and the net cash increase (decrease) by including the payment for purchase of (and proceeds from matured) marketable securities and net investments in (and proceeds from) short-term deposits, the net cash from (used in) financing activities and the effect of changes in exchange rates while excluding the advances from capital grants received in prior periods and allocated to property, plant and equipment in the current reporting period. Our definition of Free Cash Flow may differ from definitions used by other companies.

Our Free Cash Flow is derived from our U.S. GAAP Consolidated Statements of Cash Flows; a reconciliation from the Consolidated Statement of Cash Flows as reported under IFRS is provided in the table below:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Net cash from operating activities as reported under IFRS	3,342	6,366
Excluding U.S. GAAP/IFRS presentation differences:		
<i>Payment for withholding tax on vested shares</i>	44	54
<i>Payment for operating lease liabilities</i>	(67)	(67)
Net cash from operating activities adjusted under IFRS	3,319	6,353
Net Capex (non-GAAP measure)	(2,531)	(4,111)
Payment for purchase of intangible assets, net of proceeds from sale	(447)	(458)
Payment for purchase of financial assets, net of proceeds from sale	(53)	(10)
Free Cash Flow (non-GAAP measure)	288	1,774

Our Free Cash Flow was \$288 million in 2024, compared to \$1,774 million in 2023.

Capital resources

Net Financial Position and Adjusted Net Financial Position are non-GAAP measures. Our Net Financial Position represents the difference between our total liquidity and our total financial debt. Our total liquidity includes cash and cash equivalents, restricted cash, if any, short-term deposits and quoted debt securities; our total financial debt includes interest-bearing loans and borrowings, including current portion, as represented in our consolidated statement of financial position. Adjusted Net Financial Position represents net financial position less advances from capital grants, to present the effect on total liquidity of advances received on capital grants for which capital expenditures have not been incurred yet. Net Financial Position and Adjusted Net Financial Position are non-GAAP measures but we believe they provide useful information for investors and management because they give evidence of our global position either in terms of net indebtedness or net cash by measuring our capital resources based on cash and cash equivalents, restricted cash, if any, short-term deposits and quoted debt securities and the total level of our financial debt.

Our definition of Net Financial Position may differ from definitions used by other companies and therefore comparability may be limited. Our Net Financial Position and Adjusted Net Financial Position are derived from our U.S. GAAP Consolidated Balance Sheets, which differs from the Consolidated Statement of Financial Position under IFRS. A reconciliation with the Consolidated Statement of Financial Position under IFRS is provided in the table below:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Cash and cash equivalents	2,282	3,222
Short-term deposits	1,450	1,226
Government bonds issued by the U.S. Treasury	2,452	1,635
Total liquidity	6,184	6,083
Funding program loans from EIB	(1,178)	(1,077)
Credit Facility from Cassa Depositi e Prestiti SpA ("CDP SpA")	(208)	(284)
Dual tranche senior unsecured convertible bonds	(1,457)	(1,432)
Other funding programs loans	(5)	(6)
Total financial debt, as reported under IFRS	(2,848)	(2,799)
Difference in dual-trench senior convertible debt amortized cost	(41)	(64)
Difference in the presentation of finance lease	(64)	(64)
Total U.S. GAAP/IFRS differences	(105)	(128)
Total financial debt, as reported under US GAAP	(2,953)	(2,927)
Net Financial Position (non-GAAP measure)	3,231	3,156
Advances from capital grants	(385)	(152)
Adjusted Net Financial Position (non-GAAP measure)	2,846	3,004

Our Net Financial Position as of December 31, 2024, was a net cash position of \$3,231 million, increasing compared to a net cash position of \$3,156 million as of December 31, 2023.

As of December 31, 2024, our financial debt as reported under IFRS was \$2,848 million, composed of (i) \$1,683 million of current portion of financial debt and (ii) \$1,165 million of long-term debt. The breakdown of our total financial debt included: (i) \$1,457 million in senior unsecured convertible bonds issued in 2020, (ii) \$1,178 million in EIB Loans, (iii) \$208 million in CDP SpA Loans and (iv) \$5 million in loans from other funding programs.

The EIB Loans are comprised of three long-term amortizing credit facilities as part of our public funding programs. The first, signed in August 2017, is a €500 million loan, in relation to R&D and capital expenditures in the EU for the years 2017 and 2018. The entire amount was fully drawn in Euros, corresponding to \$233 million outstanding as of December 31, 2024. The second one, signed in 2020, is a €500 million credit facility agreement with EIB to support R&D and capital expenditure programs in Italy and France. The amount was fully drawn in Euros representing \$364 million outstanding as of December 31, 2024. In 2022, we signed a third long-term amortizing credit facility with EIB of €600 million. Of this amount, €300 million was withdrawn in Euros in 2022, and \$300 million was withdrawn in U.S. dollars during 2024, representing a total outstanding balance of \$581 million as of December 31, 2024.

The CDP SpA Loans are comprised of two long-term credit facilities. The first, signed in 2021, is a €150 million loan, fully drawn in Euros, of which \$65 million were outstanding as of December 31, 2024. The second one, signed in 2022, is a €200 million loan, fully drawn in Euros, of which \$143 million was outstanding as of December 31, 2024.

On August 4, 2020, we issued \$1.5 billion offering of senior unsecured convertible bonds (Tranche A for \$750 million and Tranche B for \$750 million, each, "Tranche A" and "Tranche B", respectively), due 2025 and 2027, respectively. Tranche A bonds were issued at 105.8% as zero-coupon bonds and Tranche B bonds were issued at 104.5% as zero-coupon bonds. The conversion price at issuance was \$43.62 for Tranche A equivalent to a 47.5% conversion premium and \$45.10 for Tranche B, equivalent to a 52.5% conversion premium. These conversion features correspond to an equivalent of 4,585 shares per each Tranche A bond \$200,000 par value and an equivalent of 4,435 shares per each Tranche B bond \$200,000 par value. The bonds are convertible by the bondholders or are callable by us following contractual terms and schedule, if certain conditions are satisfied, on a net-share settlement basis, except

if we elect a full-cash or full-share conversion as an alternative settlement. The net proceeds from the bond offering were \$1,567 million, after deducting issuance costs.

Our long-term debt contains standard conditions but does not impose minimum financial ratios. We had unutilized committed medium-term credit facilities with core relationship banks totaling \$634 million as of December 31, 2024.

Our current ratings with two major rating agencies that report on us on a solicited basis, are as follows: Standard & Poor's ("S&P"): "BBB+" with stable outlook; Moody's Investors Service ("Moody's"): "Baa1" with stable outlook.

3.2.6. Financial risk management

We are exposed to changes in financial market conditions in the normal course of business due to our operations in different foreign currencies and our ongoing investing and financing activities. Our activities expose us to a variety of financial risks: market risk (including foreign exchange risk, fair value interest rate risk, cash flow interest rate risk and price risk), credit risk and liquidity risk. Our overall risk management program focuses on the unpredictability of financial markets and seeks to minimize potential adverse effects on our financial performance. We use derivative financial instruments to hedge certain risk exposures.

Financial risk management is carried out by our central treasury department ("Corporate Treasury"). Additionally, a Treasury Committee, chaired by our Chief Financial Officer, steers treasury activities and ensures compliance with corporate policies. Treasury activities are thus regulated by our policies, which define procedures, objectives and controls. The policies focus on managing financial risk in terms of exposure to market risk, credit risk and liquidity risk. Treasury controls are subject to internal audits. Most treasury activities are centralized, with any local treasury activities subject to oversight from our Corporate Treasury. Our Corporate Treasury identifies, evaluates and hedges financial risks in close cooperation with our subsidiaries. It provides written principles for overall risk management, as well as written policies covering specific areas, such as foreign exchange risk, interest rate risk, price risk, credit risk, use of derivative financial instruments, and investments of excess liquidity.

The majority of cash and cash equivalents is held in U.S. dollars and Euros and is placed with financial institutions rated at least a single "A" long-term rating from two of the major rating agencies, meaning at least A3 from Moody's and A- from S&P or Fitch ratings, or better. These ratings are closely and continuously monitored in order to manage exposure to the counterparty's risk. Hedging transactions are performed only to hedge exposures deriving from operating, investing and financing activities conducted in the normal course of business.

Foreign exchange risk

We conduct our business on a global basis in various major international currencies. As a result, we are exposed to adverse movements in foreign currency exchange rates, primarily with respect to the Euro. Foreign exchange risk mainly arises from recognized assets and liabilities at our subsidiaries and future commercial transactions.

Cash flow and fair value interest rate risk

Our interest rate risk arises from long-term borrowings. Borrowings issued at variable rates expose us to cash flow interest rate risk. Borrowings issued at fixed rates expose us to fair value interest rate risk.

Credit risk

We select banks and/or financial institutions that operate with us based on the criteria of long-term rating from at least two major rating agencies and keeping a maximum outstanding amount per instrument with each bank not to exceed 20% of the total. For derivative financial instruments, management has established limits so that, at any time, the fair value of contracts outstanding is not concentrated with any individual counterparty.

We monitor the creditworthiness of our customers to which we grant credit terms in the normal course of business. If certain customers are independently rated, these ratings are used. Otherwise, if there is no independent rating, risk control assesses the credit quality of the customer, considering its financial position, past experience and other factors. The utilization of credit limits is regularly monitored. Sales to customers are primarily settled in cash, which mitigates credit risk. As of December 31, 2024 and 2023, no individual customer represented more than 10% of total trade accounts receivable. Any remaining concentrations of credit risk with respect to trade receivables are limited due to the large number of customers and their dispersion across many geographic areas.

Liquidity risk

Prudent liquidity risk management includes maintaining sufficient cash and cash equivalents, short-term deposits and marketable securities, the availability of funding from committed credit facilities and the ability to close out market positions. Our objective is to maintain a significant cash position and a low debt-to-equity ratio, which ensures adequate financial flexibility. Our liquidity management policy is to finance our investments with net cash from operating activities.

Management monitors rolling forecasts of our liquidity reserve based on expected cash flows.

3.3. Risk management and Internal control

3.3.1. Risk Management

3.3.1.1. Our risk management approach

As a company operating globally in the semiconductor market, we are exposed to risks, particularly in the current environment of increased volatility, uncertainty, complexity and ambiguity. For a description of our risk factors, please refer to Section 3.3.1.2. (*Report of the Managing Board - Risk Management and Internal Control - Risk Management - Risk factors*). Our embedded approach to ERM is formalized in a specific policy and is aligned with ISO 31000 (Risk Management).

This enables us to:

- set and enable our Company strategy, manage our performance, and capitalize on opportunities; and
- systematically identify, evaluate and treat specific risk scenarios.

Our ERM improvement roadmap includes, in particular, deploying our risk framework which is based on the following principles:

- taking into consideration the interests of our stakeholders;
- addressing uncertainty explicitly;
- pragmatic and tailored to us;
- integral part of our processes and decision-making;
- proactive, structured, dynamic, iterative and responsive to change; and

- based on the best available information.

Our risk framework is described in the following chart:

RISK FRAMEWORK

Our overall risk approach is managed by our Chief Audit & Risk Executive (our "Chief Audit and Risk Executive") under the direct responsibility of our Managing Board and the oversight of our Supervisory Board. The scope of this oversight role is detailed in our Supervisory Board charter.

Our risk governance is described in the following chart:

RISK GOVERNANCE

3.3.1.2. Risk Factors

Below is a list of the main risk factors we believe are related to the semiconductor industry and specifically related to our operations, which may affect our results, performance, and the ability of our management to predict the future of our Company. This list of main risk factors also includes risks that we have identified to be material, including through our double materiality assessment ("DMA") performed in 2024 (as described further in Section 3.4.2.3.C (*Strategy - Material impacts, risks and opportunities and their interaction with strategy and business model*)).

Summary of Risk Factors

Risks Related to the Semiconductor Industry which Impact Us

- We, and the semiconductor industry as a whole, have been and may be further impacted by changes in, or uncertainty about, global, regional and local economic, political, legal, regulatory and social environments as well as climate change.
- The semiconductor industry is cyclical and downturns in the semiconductor industry can negatively affect our results of operations and financial condition.
- Epidemics or pandemics may impact the global economy and could also adversely affect our business, financial condition and results of operations.
- We may not be able to match our production capacity to demand.
- Competition in the semiconductor industry is intense, and we may not be able to compete successfully if our product design technologies, process technologies and products do not meet market requirements. Furthermore, the competitive environment of the industry has resulted, and is expected to continue to result, in vertical and horizontal consolidation among our suppliers, competitors and customers, which may lead to erosion of our market share, impact our ability to compete and require us to restructure our operations.

Risks Related to Our Operations

- Our high fixed costs could adversely impact our results.
- Our capital needs are high compared to those competitors who do not manufacture their own products and we may need additional funding in the coming years to finance our investments, to purchase other companies or technologies developed by third parties or to refinance our maturing indebtedness.
- Our operating results depend on our ability to obtain quality supplies on commercially reasonable terms. As we depend on a limited number of suppliers for materials, equipment and technology, we may experience supply disruptions if suppliers interrupt supply, increase prices or experience material adverse changes in their financial condition.
- Our financial results can be affected by fluctuations in exchange rates, principally in the value of the U.S. dollar.
- Our operating results may vary significantly from quarter to quarter and annually and may also differ significantly from our expectations or guidance.
- If our external silicon foundries or back-end subcontractors fail to perform, this could adversely affect our business prospects, financial condition and results of operations.
- Our manufacturing processes are highly complex, costly and potentially vulnerable to impurities, disruptions or inefficient implementation of production changes or interruptions that can significantly increase our costs and delay product shipments to our customers.

- We may experience quality problems from time to time that can result in decreased sales and operating margin and product liability or warranty claims.
- Disruptions in our relationships with any one of our key customers or distributors, and/or material changes in their strategy or financial condition or business prospects, could adversely affect our results of operations.
- We may experience delays in delivering our product and technology roadmaps as well as transformation initiatives.
- Our computer systems, including hardware, software, information and cloud-based initiatives, are subject to attempted security breaches and other cybersecurity threats, which, if successful, could adversely impact our business.
- We may be subject to theft, loss, or misuse of personal data about our employees, customers, or other third parties, which could increase our expenses, damage our reputation, or result in legal or regulatory proceedings.
- Our business is dependent in large part on continued growth in the industries and segments into which our products are sold and on our ability to retain existing customers and attract new ones. A market decline in any of these industries, our inability to retain and attract customers, or customer demand for our products which differs from our projections, could have a material adverse effect on our results of operations.
- Market dynamics have driven, and continue to drive us, to a strategic repositioning.
- We depend on collaboration with other semiconductor industry companies, research organizations, universities, customers and suppliers to further our R&D efforts, and our business and prospects could be materially adversely affected by the failure or termination of such alliances.
- We depend on patents to protect our rights to our technology and may face claims of infringing the IP rights of others.
- We operate in many jurisdictions with highly complex and varied tax regimes. Changes in tax rules, new or revised legislation or the outcome of tax assessments and audits could cause a material adverse effect on our results.
- We receive public funding, and a reduction in the amount available to us or demands for repayment could increase our costs and impact our results of operations.
- Some of our production processes and materials are environmentally sensitive, which could expose us to liability and increase our costs due to environmental, health and safety laws and regulations or because of damage to the environment.
- Climate change, increased focus on social impact, and related sustainability regulations and initiatives, including our commitment to become carbon neutral in all direct and indirect emissions (scopes 1 and 2), product transportation, business travel, and employee commuting emissions (our scope 3 focus), and to achieve our 100% renewable electricity sourcing goal by the end of 2027, could place additional burden on us and our operations.
- Individual customer use of certain products, which may differ from the anticipated uses of such products and result in differences in performance, including energy consumption, may lead to a failure to achieve our disclosed emission-reduction goals, adverse legal action or additional research costs.
- Loss of key employees and the inability to continuously recruit and retain qualified employees could hurt our competitive position.
- The interests of our controlling shareholder, which is in turn indirectly controlled by the French and Italian governments, may conflict with other investors' interests. In addition, our controlling

shareholder may sell our existing common shares or issue financial instruments exchangeable into our common shares at any time.

- Our shareholder structure and our preference shares may deter a change of control.
- Any decision to reduce or discontinue paying cash dividends to our shareholders could adversely impact the market price of our common shares.
- We are required to prepare financial statements under IFRS and we also prepare Consolidated Financial Statements under U.S. GAAP, and such dual reporting may impair the clarity of our financial reporting.
- There are inherent limitations on the effectiveness of our controls.
- Because we are subject to the corporate law of The Netherlands, U.S. investors might have more difficulty protecting their interests in a court of law or otherwise than if we were a U.S. company.

Risks Related to the Semiconductor Industry which Impact Us

We, and the semiconductor industry as a whole, have been and may be further impacted by changes in, or uncertainty about, global, regional and local economic, political, legal, regulatory and social environments as well as climate change.

Changes in, and uncertainty about, economic, political, legal, regulatory and social conditions pose a risk as consumers and businesses may postpone spending in response to factors such as curtailment of trade and other business restrictions, financial market volatility, interest rate fluctuations, recessions, shifts in inflationary and deflationary expectations, lower capital and productivity growth, unemployment, negative news, declines in income or asset values, natural catastrophes or weather events, and/or other factors. Such global, regional and local conditions are volatile, subject to frequent change and could have a material adverse effect on customer and end-market demand for our products, thus materially adversely affecting our business and financial condition.

We may also experience a shortage of certain semiconductor composites and delays in shipments due to supply chain disruptions caused by geopolitical conflicts, natural catastrophes, extreme weather events, or punctual power outages, and sales of our products may be negatively impacted by such events, both directly and indirectly through a reduction of sales or production by our customers in or to affected areas or otherwise.

Geopolitical conflicts have additionally resulted in certain countries imposing sanctions. Further consequences of such conflicts could include a risk of further sanctions, embargoes, regional instability, geopolitical shifts and adverse effects on macro-economic conditions, currency exchange rates and financial markets. This could lead to disruption to international commerce and the global economy, and could have a negative effect on our ability to sell to, ship products to, collect payments from, and support customers in certain regions based on trade restrictions, embargoes, logistics restrictions and export control law restrictions.

The institution of trade tariffs globally, as well as the threat thereof, could negatively impact economic conditions, which could have negative repercussions for our business. In particular, trade protection and national security policies of the U.S. and Chinese governments, including tariffs, trade restrictions, export restrictions and the placing of companies on restricted entity lists, have and may continue to limit or prevent us from transacting business with certain of our Chinese customers or suppliers; limit, prevent or discourage certain of our Chinese customers or suppliers from transacting business with us; or make it more expensive to do so. If disputes were to arise under any of our agreements with other parties conducting business in China, the resolution of such dispute may be subject to the exercise of discretion by the Chinese government, or agencies of the Chinese government, which may have a material adverse effect on our business. In addition, we could face increased competition as a result of China's programs to promote a domestic semiconductor industry and supply chains (including the *Made in China 2025* campaign). Various countries are imposing and increasing tariffs on imports, and may impose additional

tariffs or further increase existing tariffs on imports, or impose other restrictions on imports in response to these measures by other countries. Any or all of these measures or restrictions may impact our ability to service our customer base in a cost-effective manner.

Trade policy changes could trigger retaliatory actions by affected countries, which could have a negative impact on our ability to do business in affected countries or lead to reduced purchases of our products by foreign customers, leading to increased costs of components contained in our products, increased manufacturing costs of our products, currency exchange rate volatility, and higher prices for our products in foreign markets. Further, protectionist measures, laws or governmental policies may encourage our customers to relocate their manufacturing capacity or supply chain to their own respective countries or other countries, or require their respective contractors, subcontractors and relevant agents to do so, which could impair our ability to sustain our current level of productivity and manufacturing efficiency.

We, and the semiconductor industry as a whole, face greater risks due to the international nature of the semiconductor business, including in the countries where we, our customers or our suppliers operate, such as:

- instability of foreign governments, including the threat of war, military conflict, civil unrest, regime changes, mass migration and terrorist attacks;
- natural events such as severe weather, earthquakes and tsunamis, or the effects of climate change;
- epidemics or pandemics such as disease outbreaks and other health related issues;
- changes in, or uncertainty about, laws, regulations (including executive orders) and policies affecting trade and investment, including following Brexit and including through the imposition of trade and travel restrictions, government sanctions, local practices which favor local companies and constraints on investment;
- complex and varying government regulations and legal standards, particularly with respect to export control regulations and restrictions, customs and tax requirements, data privacy, IP anti-corruption, bribery, fraud and sanctions (including potential third-party product diversion risks into sanctioned countries or use for unauthorized purposes);
- differing practices of regulatory, tax, judicial and administrative bodies, including with regards to the interpretation of laws, governmental approvals, permits and licenses;
- water availability, usage and consumption levels, as well as recycling and discharge practices;
- constraints in the supply of electricity as a result of cost increases, reliability of infrastructure or due to extreme weather events, leading to power outages; and
- changes in, or uncertainty about, labor laws and human rights, and our ability to ensure compliance across our international supply chains.

The semiconductor industry is cyclical and downturns in the semiconductor industry can negatively affect our results of operations and financial condition.

The semiconductor industry is cyclical and has been subject to significant downturns from time to time, as a result of global economic conditions, as well as industry-specific factors, such as built-in excess capacity, fluctuations in product supply, product obsolescence and changes in end-customer preferences.

Downturns are typically characterized by reduction in overall demand, accelerated erosion of selling prices, reduced revenues and high inventory levels, any of which could result in a significant deterioration of our results of operations. Such macro-economic trends typically relate to the semiconductor industry as a whole rather than to the individual semiconductor markets to which we sell our products. To the extent that industry downturns are concurrent with the timing of new increases in production capacity or introduction of new advanced technologies in our industry, the negative effects on our business from such

industry downturns may also be more severe. We have experienced revenue volatility and market downturns in the past and expect to experience them in the future, which could have a material adverse impact on our results of operations and financial condition.

The recent increase in inflation rates in the markets in which we operate may lead us to experience higher costs related to labor, energy, water, transportation, wafer and other raw materials costs from suppliers. Our suppliers may raise their prices, and in the competitive markets in which we operate, we may not be able to make corresponding price increases to preserve our gross margins and profitability due to market conditions and competitive dynamics. Additionally, any such increase in prices may not be accepted by our customers.

Epidemics or pandemics may impact the global economy and could also adversely affect our business, financial condition and results of operations.

Epidemics or pandemics may result in authorities imposing, and businesses and individuals implementing, numerous measures to try to contain the virus, including travel bans and restrictions, shelter-in-place and stay-at-home orders, quarantines and social distancing guidelines. This may negatively impact the ability of our suppliers to deliver on their commitments to us, our ability to ship our products to our customers and general consumer demand for our products may be negatively impacted by the pandemic and/or government responses thereto.

Many of our products and services are considered to be essential under national and local guidelines. As such, during the COVID-19 pandemic, we generally continued to operate in each of the jurisdictions where we were present. However, certain of our facilities were not able to operate at optimal capacity and any future similarly restrictive measures may have a negative impact on our operations, supply chain and transportation networks, and our products and services may not be considered to be essential in the future. In addition, our customers and suppliers may experience disruptions in their operations and supply chains, which could result in delayed, reduced, or cancelled orders, or collection risks, and which may adversely affect our results of operations and financial condition.

During an epidemic or pandemic, governments may look to re-direct resources and implement austerity measures in the future to balance public finances, which could result in reduced economic activity. Any resulting economic downturn could reduce overall demand for our products, accelerate the erosion of selling prices, lead to reduced revenues and higher inventory levels, any of which could result in a significant deterioration of our results of operations and financial condition.

An epidemic or pandemic may also lead to increased disruption and volatility in capital markets and credit markets. Unanticipated consequences of an epidemic or pandemic and resulting economic uncertainty could adversely affect our liquidity and capital resources in the future.

We may not be able to match our production capacity to demand.

As a result of the cyclical and volatility of the semiconductor industry, it is difficult to predict future developments in the markets we serve, and, in turn, to estimate requirements for production capacity. If our markets, start-up or ramp-ups in manufacturing operations are not efficiently executed, major customers or certain product designs or technologies do not perform as well as we have anticipated, demand is impacted by factors outside of our or our customers' control, or if there is otherwise any future excess capacity by us or other semiconductor manufacturers, we risk unused capacity charges, price erosion, write-offs of inventories and losses on products that may adversely impact our operating results, and we could be required to undertake restructuring and transformation measures that may involve significant charges to our earnings. Furthermore, during certain periods, the global supply of semiconductor industry fabrication capacity may not be sufficient to meet the demand for semiconductor products. We may also experience increased demand in certain market segments and product technologies and any future shortage of our capacity and the capacity of our sub-contractors may lead to an increase in the lead times of our delivery to customers, us being required to enter into agreements with

our suppliers with onerous terms such as take-or-pay arrangements, or us being unable to service some of our customers, which may result in adverse effects on our customer relationships and in liability claims. Further, as a result of this supply imbalance, the industry in general may experience a high level of profitability and gross margins, which may not be sustainable over the long-term.

Competition in the semiconductor industry is intense, and we may not be able to compete successfully if our product design technologies, process technologies and products do not meet market requirements. Furthermore, the competitive environment of the industry has resulted, and is expected to continue to result, in vertical and horizontal consolidation among our suppliers, competitors and customers, which may lead to erosion of our market share, impact our ability to compete and require us to restructure our operations.

We compete in different product lines to various degrees on certain characteristics, for example, price, technical performance, product features, product design, product availability, process technology, manufacturing capabilities and sales and technical support. Given the intense competition in the semiconductor industry, if our products do not meet market requirements based on any of these characteristics, our business, financial condition and results of operations could be materially adversely affected. Our competitors may have a stronger presence in key markets and geographic regions, greater name recognition, larger customer bases, greater government support and greater financial, R&D, sales and marketing, manufacturing, distribution, technical and other resources than we do. These competitors may be able to adapt more quickly to changes in the business environment, to new or emerging technologies and to changes in customer requirements.

The semiconductor industry is intensely competitive and characterized by the high costs associated with developing marketable products and manufacturing technologies as well as high levels of investment in production capabilities. As a result, the semiconductor industry has experienced, and is expected to continue to experience, significant vertical and horizontal consolidation among our suppliers, competitors and customers. Consolidation in the semiconductor industry could erode our market share, negatively impact our ability to compete and require us to increase our R&D effort, engage in mergers and acquisitions and/or restructure our operations.

Risks Related to Our Operations

Our high fixed costs could adversely impact our results.

Our operations are characterized by high fixed or other costs which are difficult to reduce, including costs related to manufacturing, particularly as we operate our own manufacturing facilities, and the employment of our highly skilled workforce. When demand for our products decreases, competition increases or we fail to forecast demand accurately, we may be driven to reduce prices and we may not always be able to decrease our total costs in line with resulting revenue declines. As a result, the costs associated with our operations may not be fully absorbed, leading to unused capacity charges, higher average unit costs and lower gross margins, adversely impacting our results.

Our capital needs are high compared to those competitors who do not manufacture their own products and we may need additional funding in the coming years to finance our investments, to purchase other companies or technologies developed by third parties or to refinance our maturing indebtedness.

As a result of our choice to maintain control of a large portion of our manufacturing technologies and capabilities, we may require significant capital expenditure to maintain or upgrade our facilities if our facilities become inadequate in terms of capacity, flexibility and location. We monitor our capital expenditures taking into consideration factors such as trends in the semiconductor market, customer requirements and capacity utilization. These capital expenditures may increase in the future if we decide

to upgrade or expand the capacity of our manufacturing facilities, purchase or build new facilities or increase investments supporting key strategic initiatives. For instance, we may be unable to successfully develop, maintain and operate large infrastructure projects. Such increased capital expenditures associated with large infrastructure projects and strategic initiatives might not achieve profitability or we may be unable to utilize infrastructure projects to full capacity. There can also be no assurance that future market demand and products required by our customers will meet our expectations. We also may need to invest in other companies, in IP and/or in technology developed either by us or by third parties to maintain or improve our position in the market or to reinforce our existing business. Failure to invest appropriately and in a timely manner or to successfully integrate any recent or future business acquisitions may prevent us from achieving the anticipated benefits and could have a material adverse effect on our business and results of operations.

The foregoing may require us to secure additional financing, including through the issuance of debt, equity or both. The timing and the size of any new share or bond offering would depend upon market conditions as well as a variety of other factors. In addition, the capital markets may from time to time offer terms of financing that are particularly favorable. We cannot exclude that we may access the capital markets opportunistically to take advantage of market conditions. Any such transaction or any announcement concerning such a transaction could materially impact the market price of our common shares. If we are unable to access capital on acceptable terms, this may adversely affect our business and results of operations.

Our operating results depend on our ability to obtain quality supplies on commercially reasonable terms. As we depend on a limited number of suppliers for materials, equipment and technology, we may experience supply disruptions if suppliers interrupt supply, increase prices or experience material adverse changes in their financial condition.

Our ability to meet our customers' demand to manufacture our products depends upon obtaining adequate supplies of quality materials on a timely basis and on commercially reasonable terms. Certain materials are available from a limited number of suppliers or only from a limited number of suppliers in a particular region. We purchase certain materials whose prices on the world markets have fluctuated significantly in the past and may fluctuate significantly in the future. Although supplies for most of the materials we currently use are adequate, shortages could occur in various essential materials due to interruption of supply or increased demand in the industry. For instance, epidemics or pandemics could cause disruptions from the temporary closure of suppliers' facilities or delays and reduced export or shipment of various materials. Geopolitical conflicts could also disrupt supply chains and cause shortages of certain semiconductor components and corresponding delays in shipments. Any such shortage may impact different geographical markets disproportionately, leading to shortages or unavailability of supplies in specific areas and higher transportation costs. In addition, the costs of certain materials may increase due to recent inflationary rates and market pressures and we may not be able to pass on such cost increases to our customers.

We also purchase semiconductor manufacturing equipment and third-party licensed technology from a limited number of suppliers and providers and, because such equipment and technology are complex, it is difficult to replace one supplier or provider with another or to substitute one piece of equipment or type of technology for another. In addition, suppliers and providers may extend lead times, limit our supply, increase prices or change contractual terms related to certain manufacturing equipment and third-party licensed technology, any of which could adversely affect our results. Furthermore, suppliers and technology providers tend to focus their investments on providing the most technologically advanced equipment, materials and technology and may not be able to address our requirements for equipment, materials or technology of older generations. Although we work closely with our suppliers and providers to avoid such shortages, there can be no assurance that we will not encounter these problems in the future.

Consolidation among our suppliers or vertical integration among our competitors may limit our ability to obtain sufficient quantities of materials, equipment and/or technology on commercially reasonable terms and engage in mergers and acquisitions. In certain instances, we may be required to enter into

agreements with our suppliers with onerous terms, such as take-or-pay arrangements. If we are unable to obtain supplies of materials, equipment or technology in a timely manner or at all, or if such materials, equipment or technology prove inadequate or too costly, our results of operations could be adversely affected.

Our financial results can be affected by fluctuations in exchange rates, principally in the value of the U.S. dollar.

Currency exchange rate fluctuations affect our results of operations because our reporting currency is the U.S. dollar, in which we receive the major portion of our revenues, while, more importantly, we incur a limited portion of our revenue and a significantly higher portion of our costs in currencies other than the U.S. dollar. A significant variation of the value of the U.S. dollar against the principal currencies that have a material impact on us (primarily the Euro, but also certain other currencies of countries where we have operations, such as the Singapore dollar) could result in a favorable impact, net of hedging, on our net income in the case of an appreciation of the U.S. dollar, or a negative impact, net of hedging, on our net income if the U.S. dollar depreciates relative to these currencies, in particular with respect to the Euro.

In order to reduce the exposure of our financial results to the fluctuations in exchange rates, our principal strategy has been to balance as much as possible the proportion of sales to our customers denominated in U.S. dollars with the amount of purchases from our suppliers denominated in U.S. dollars and to reduce the weight of the other costs, including depreciation, denominated in Euros and in other currencies. In order to further reduce our exposure to U.S. dollar exchange rate fluctuations, we have hedged certain line items on our consolidated statements of income, in particular with respect to a portion of the cost of sales, the majority of the R&D expenses and certain SG&A expenses located in the Euro zone. We also hedge certain manufacturing costs, included within the cost of sales, denominated in Singapore dollars. There can be no assurance that our hedging transactions will prevent us from incurring higher Euro-denominated manufacturing costs and/or operating expenses when translated into our U.S. dollar-based accounts.

Our operating results may vary significantly from quarter to quarter and annually and may also differ significantly from our expectations or guidance.

Our operating results are affected by a wide variety of factors that could materially and adversely affect revenues and profitability or lead to significant variability of our operating results from one period to the next. These factors include changes in demand from our key customers, capital requirements, inventory management, availability of funding, competition, new product developments, start of adoption of our new products by customers, technological changes, manufacturing or supplier issues and effective tax rates. In addition, in periods of industry overcapacity or when our key customers encounter difficulties in their end-markets or product ramps, orders are more exposed to cancellations, reductions, price renegotiation or postponements, which in turn reduce our ability to forecast the next quarter or full year production levels, revenues and margins. Although backlog may provide an indication of future orders, quantities actually purchased by customers, as well as prices, are subject to variations between booking and delivery and, in some cases, to cancellation due to changes in customer needs or industry conditions, as well as seasonality, among other things. As a result, we may not meet our financial targets, which could in turn have an impact on our reputation or brand. For these reasons and others that we may not yet have identified, our revenues and operating results may differ materially from our expectations or guidance as visibility is reduced.

If our external silicon foundries or back-end subcontractors fail to perform, this could adversely affect our business prospects, financial condition and results of operations.

We currently use external silicon foundries and back-end subcontractors for a portion of our manufacturing activities. Any limitation on the ability of our external silicon foundries and back-end

subcontractors to satisfy our demand may cause our results of operations and ability to satisfy the demand of our customers to suffer. Likewise, if we are unable to meet our commitments to silicon foundries and back-end subcontractors, our results of operations could suffer. Prices for these services also vary depending on capacity utilization rates at our external silicon foundries and back-end subcontractors, quantities demanded and product and process technology. Such outsourcing costs can vary materially and, in cases of industry shortages, they can increase significantly, negatively impacting our business prospects, financial condition and results of operations.

Our manufacturing processes are highly complex, costly and potentially vulnerable to impurities, disruptions or inefficient implementation of production changes or interruptions that can significantly increase our costs and delay product shipments to our customers.

Our manufacturing processes are highly complex, require advanced and increasingly costly equipment and are continuously modified or maintained in an effort to improve yields and product performance and lower the cost of production.

Furthermore, impurities or other difficulties in the manufacturing process can lower yields, interrupt production or result in scrap. As system complexity and production changes have increased and sub-micron technology has become more advanced, manufacturing tolerances have been reduced and requirements for precision have become even more demanding. We have from time to time experienced bottlenecks and production difficulties that have caused delivery delays and quality control problems. There can be no assurance that we will not experience bottlenecks or production, transition or other difficulties in the future.

In addition, we are exposed to risks related to interruptions of our manufacturing processes. If any of our property or equipment is damaged or otherwise rendered unusable or inoperable due to accident, cyberattack or otherwise this could result in interruptions which could have a material adverse effect on our business, financial condition and results of operations.

We may experience quality problems from time to time that can result in decreased sales and operating margin and product liability or warranty claims.

We sell complex products that may not in each case comply with specifications or customer requirements, or may contain design or manufacturing defects, that could cause personal injury, property damage or security risks that could be exploited by unauthorized third parties hacking, corrupting or otherwise obtaining access to our products, including the software loaded thereon by us, our suppliers or our customers. Although our general practice is to contractually limit our liability to the repair, replacement or refund of defective products, we occasionally agree to contractual terms with key customers in which we provide extended warranties and accordingly we may face product liability, warranty, delivery failure, and/or other claims relating to our products that could result in significant expenses relating to compensation payments, product recalls or other actions related to such extended warranties and/or to maintain good customer relationships, which could result in decreased sales and operating margin and other material adverse effects on our business. Costs or payments we may make in connection with warranty and other claims or product recalls may adversely affect our results of operations. There can be no assurance that we will be successful in maintaining our relationships with customers with whom we incur quality problems. Furthermore, if litigation occurs we could incur significant costs and liabilities to defend ourselves against such claims. The industry has experienced a rise in premiums and deductibles with regards to insurance policies. These may continue to increase and insurance coverage may also correspondingly decrease. If litigation occurs and damages are awarded against us, there can be no assurance that our insurance policies will be available or adequate to protect us against such claims.

Disruptions in our relationships with any one of our key customers or distributors, and/or material changes in their strategy or financial condition or business prospects, could adversely affect our results of operations.

A substantial portion of our sales is derived from a limited number of customers and distributors. The level of sales booked by our customers and distributors varies year to year and there can be no assurance that our customers or distributors will continue to book the same level of sales with us that they have in the past, will continue to succeed in the markets they serve and will not purchase competing products over our products. Many of our key customers and distributors operate in cyclical businesses that are also highly competitive, and their own market positions may vary considerably. In recent years, some of our customers have vertically integrated their businesses. Such vertical integrations may impact our business. Our relationships with the newly formed entities could be either reinforced or jeopardized by the integration. If we are unable to maintain or increase our market share with our key customers or distributors, or if they were to increase product returns or fail to meet payment obligations, our results of operations could be materially adversely affected. Certain of our products are customized to our customers' specifications. If customers do not purchase products made specifically for them, we may not be able to recover a cancellation fee from our customers or resell such products to other customers. In addition, the occurrence of epidemic or pandemic outbreaks could affect our customers. The geographic spread of epidemics or pandemics may be difficult to predict and adverse public health impacts on our customers could negatively affect our results.

We may experience delays in delivering our product and technology roadmaps as well as transformation initiatives.

Our industry adapts to technological advancements and it is likely that new products, equipment, processes and service methods, including transformation initiatives related to digitalization, are in the process of being implemented. Any failure by us to manage our data governance processes could undermine our initiatives related to digitalization and any failure by us to react to changes or advances in existing technologies and processes as we develop and invest in our product, technology and transformation roadmaps could materially delay the introduction of new solutions. If we are not able to execute on these roadmaps on a timely basis or at an acceptable cost this could result in loss of competitiveness of our solutions, decreased revenue and a loss of market share.

Our computer systems, including hardware, software, information and cloud-based initiatives, are subject to attempted security breaches and other cybersecurity threats, which, if successful, could adversely impact our business.

We have, from time to time, detected and experienced attempts by others to gain unauthorized access to our computer systems and networks. The reliability and security of our information technology infrastructure and software, including our AI technology, and our ability to expand and continually update technologies, including to transition to cloud-based technologies, in response to our changing needs is critical to our business. In the current environment, there are numerous and evolving risks to cybersecurity, including criminal hackers, state-sponsored intrusions, terrorism, industrial espionage, employee malfeasance, vandalism and human or technological error. Computer hackers and others routinely attempt to breach the security of technology products, services, and systems, and those of our customers, suppliers, partners and providers of third-party licensed technology, and some of those attempts may be successful.

The attempts to breach our systems, including our cloud-based systems, and to gain unauthorized access to our information technology systems are becoming increasingly more sophisticated, are often well-financed, in some cases supported by state actors, and are designed to not only track, but also to evade detection. These attempts may include covertly introducing malware into our computers, including those in our manufacturing operations, and impersonating unauthorized users, among others. For instance, employees and former employees, in particular former employees who become employees of our

competitors or customers, may misappropriate, use, publish or provide to our competitors or customers our IP and/or proprietary or confidential business information. Also, third parties may attempt to register domain names similar to our brands or website, which could cause confusion and divert online customers away from our products.

Since the techniques used by cyber attackers change frequently and are often not recognized until launched against a target, we may be unable to anticipate these techniques or to implement adequate preventative measures. Our use of AI technology may also increase vulnerability to cybersecurity risks, including through unauthorized use or misuse of AI tools and bad inputs or logic or the introduction of malicious code incorporated into AI generated code. AI and machine learning also may be used for certain cybersecurity attacks, improving or expanding the existing capabilities of threat actors in manners we cannot predict at this time, resulting in greater risks of security incidents and breaches.

Such security incidents and breaches could result in, for example, unauthorized access to, disclosure, modification, misuse, loss, or destruction of our, our customer, or other third-party data or systems, theft of our trade secrets and other sensitive or confidential data, including personal information and IP, system disruptions, and denial of service. In the event of such breaches, we, our customers or other third parties could be exposed to potential liability, litigation, and regulatory action, as well as the loss of existing or potential customers, damage to our reputation, and other financial loss and such breaches could also result in losing existing or potential customers in connection with any actual or perceived security vulnerabilities in our systems. In addition, the cost and operational consequences of responding to breaches and implementing remediation measures could be significant. As these threats continue to develop and grow, we have been adapting and strengthening our security measures.

As a result of work-from-home policies that we have undertaken, there has been additional reliance placed on our IT systems and resources. The resulting reliance on these resources, and the added need to communicate by electronic means, could increase our risk of cybersecurity incidents.

Geopolitical instability has been associated with an increase in cybersecurity incidents. This may result in a higher likelihood that we may experience direct or collateral consequences from cybersecurity conflicts between nation-states or other politically motivated actors targeting critical technology infrastructure.

U.S. and foreign regulators have increased their focus on cybersecurity vulnerabilities and risks, and customers and service providers are increasingly demanding more rigorous contractual certification and audit provisions regarding cybersecurity and data governance. This may result in an increase of our overall compliance burden due to increasingly onerous obligations and leading to significant expense. There may also be shorter deadlines in which to notify the authorities of data breaches and ever-increasing fines and penalties for businesses that fail to respond swiftly and appropriately to cyberattacks. Any failure to comply could also result in proceedings against us by regulatory authorities or other third parties.

We continue to increase the resources we allocate to implementing, maintaining and/or updating security systems to protect data and infrastructure and to raising security awareness among those having access to our systems. However, these security measures cannot provide absolute security and there can be no assurance that our employee training, operational, and other technical security measures or other controls will detect, prevent or remediate security or data breaches in a timely manner or otherwise prevent unauthorized access to, damage to, or interruption of our systems and operations.

We regularly evaluate our IT systems and business continuity plan to make enhancements and periodically implement new or upgraded systems, including the transition and migration of our data systems to cloud-based platforms and critical system migration. Any delay in the implementation of, or disruption in the transition to different systems could adversely affect our ability to record and report financial and management information on a timely and accurate basis and could impact our operations and financial position. In addition, a miscalculation of the level of investment needed to ensure our technology solutions are current and up-to-date as technology advances and evolves could result in disruptions in our business should the software, hardware or maintenance of such items become out-of-

date or obsolete and the costs of upgrading our cybersecurity systems and remediating damages could be substantial.

We may also be adversely affected by security breaches related to our equipment providers and providers of IT services or third-party licensed technology. As a global enterprise, we could also be impacted by existing and proposed laws and regulations, as well as government policies and practices related to cybersecurity, data privacy and data protection. Additionally, cyberattacks or other catastrophic events resulting in disruptions to or failures in power, information technology, communication systems or other critical infrastructure could result in interruptions or delays to us, our customers, or other third-party operations or services, financial loss, potential liability, damage to our reputation and could also affect our relationships with our customers, suppliers and partners. See Section 3.3.1.4 (*Illustrative risk management measure - Protection against cyber threats*).

We may be subject to theft, loss, or misuse of personal data about our employees, customers, or other third parties, which could increase our expenses, damage our reputation, or result in legal or regulatory proceedings.

We have, from time to time, detected and experienced attempts by others to gain unauthorized access to our computer systems and networks, may experience successful breached of our computer systems in the future, and may be adversely affected by security breaches related to our equipment providers and providers of IT services or third-party licensed technology. The theft, loss or misuse of personal data processed by us or for us, as a result of any such breaches or otherwise, could result in significantly increased security costs or potential liability, litigation and regulatory action, as well as the loss of existing or potential customers

Further, with increasing digitalization, data privacy-related legislations are rapidly evolving around the globe which may have a negative impact on our business if interpreted or implemented in a manner that is inconsistent from country to country and inconsistent with the current policies and practices of our customers or business partners. We may also have to change the manner in which we contract with our business partners, store and transfer information and otherwise conduct our business, which could increase our costs and reduce our revenues.

Our business is dependent in large part on continued growth in the industries and segments into which our products are sold and on our ability to retain existing customers and attract new ones. A market decline in any of these industries, our inability to retain and attract customers, or customer demand for our products which differs from our projections, could have a material adverse effect on our results of operations.

The demand for our products depends significantly on the demand for our customers' end products. Growth of demand in the industries and segments into which our products are sold fluctuates significantly and is driven by a variety of factors, including consumer spending, consumer preferences, the development and acceptance of new technologies and prevailing economic conditions. Changes in our customers' markets and in our customers' respective shares in such markets could result in slower growth and a decline in demand for our products. In addition, if projected industry growth rates do not materialize as forecasted, our spending on process and product development ahead of market acceptance could have a material adverse effect on our business, financial condition and results of operations.

Our business is dependent upon our ability to retain existing customers. In 2024 our largest customer, Apple, accounted for 14.5% of our total revenues. While we do not believe to be dependent on any one customer or group of customers, the loss of key customers or important sockets at key customers could have an adverse effect on our results of operations and financial condition.

Our existing customers' product strategy may change from time to time and/or product specifications may change on short-time product life cycles and we have no certainty that our business, financial position and results of operations will not be affected. Our business is also dependent upon our ability to attract new

customers. There can be no assurance that we will be successful in attracting and retaining new customers, or in adequately projecting customer demand for our products. Our failure to do so could materially adversely affect our business, financial condition and results of operations.

Market dynamics have driven, and continue to drive us, to a strategic repositioning.

In recent years, we have undertaken several initiatives to reposition our business. Our strategies to improve our results of operations and financial condition have led us, and may in the future lead us, to acquire businesses that we believe to be complementary to our own, to divest ourselves of or wind down activities that we believe do not serve our longer term business plans, or to enter into partnerships or joint ventures to enter into or strengthen our position in certain markets and increase our scale of operations. Our potential acquisition strategies depend in part on our ability to identify suitable acquisition targets, finance their acquisition, obtain approval by our shareholders and obtain required regulatory and other approvals. Our potential divestiture strategies depend in part on our ability to compete and to identify the activities in which we should no longer engage, obtain the relevant approvals pursuant to our governance process and then determine and execute appropriate methods to divest of them. Our actual or potential partnerships and joint venture strategies depend in part on our ability to execute sales and operations plans alongside our partner or joint venture.

We are constantly monitoring our product portfolio and cannot exclude that additional steps in this repositioning process may be required. Furthermore, we cannot assure that any strategic repositioning of our business, including executed and possible future acquisitions, dispositions or partnerships and joint ventures, will be successful and will not result in impairment, restructuring charges and other related closure costs. The realization of our identified opportunities, including sustainability opportunities, may result in exposure to new risks. Should we not be able to anticipate these risks, or should the anticipated benefits not be realized from these opportunities, our business and strategy could be adversely affected.

Acquisitions, divestitures, partnerships and joint ventures involve a number of risks that could adversely affect our operating results and financial condition, including, in respect of acquisitions and divestitures, the inability for us to successfully integrate businesses or teams that we acquire with our culture and strategies on a timely basis or at all, and the potential requirement for us to record charges related to the goodwill or other long-term assets associated with the acquired businesses. There can be no assurance that we will be able to achieve the full scope of the benefits we expect from a particular acquisition, divestiture, partnership, joint venture or investment. Our business, financial condition and results of operations may suffer if we fail to coordinate our resources effectively to manage both our existing businesses and any acquired businesses. In addition, the financing of future acquisitions, divestitures, partnerships or joint ventures may negatively impact our financial position, including our ability to pay a dividend and/or repurchase our shares, and our credit rating and we could be required to raise additional funding.

Other risks associated with acquisitions include the assumption of potential liabilities, disclosed or undisclosed, associated with the business acquired, which liabilities may exceed the amount of indemnification available from the seller, potential inaccuracies in the financials of the business acquired, and our ability to retain customers of an acquired entity, its business or industrialize an acquired process or technology. Identified risks associated with divestitures include loss of activities and technologies that may have complemented our remaining businesses or operations and loss of important services provided by key employees that are assigned to divested activities.

We depend on collaboration with other semiconductor industry companies, research organizations, universities, customers and suppliers to further our R&D efforts, and our business and prospects could be materially adversely affected by the failure or termination of such alliances.

Our success depends on our ability to introduce innovative new products and technologies to the marketplace on a timely basis. In light of the high levels of investment required for R&D activities, we depend in certain instances on collaborations with other semiconductor industry companies, research organizations, universities, customers and suppliers to develop or access new technologies.

Such collaboration provides us with a number of important benefits, including the sharing of costs, reductions in our own capital requirements, acquisitions of technical know-how and access to additional production capacities. However, there can be no assurance that our collaboration efforts will be successful and allow us to develop and access new technologies in due time, in a cost-effective manner and/or to meet customer demands. If a particular collaboration terminates before our intended goals are accomplished we may incur additional unforeseen costs, and our business and prospects could be adversely affected. Furthermore, if we are unable to develop or otherwise access new technologies, whether independently or in collaboration with another industry participant, we may fail to keep pace with the rapid technology advances in the semiconductor industry, our participation in the overall semiconductor industry may decrease and we may also lose market share.

We depend on patents to protect our rights to our technology and may face claims of infringing the IP rights of others.

We depend on patents and other IP rights to protect our products and our manufacturing processes against misappropriation by others. The process of seeking patent protection can be long and expensive, and there can be no assurance that we will receive patents from currently pending or future applications. Even if patents are issued, they may not be of sufficient scope or strength to provide meaningful protection or any commercial advantage. In addition, effective IP protection may be unavailable or limited in some countries. Our ability to enforce one or more of our patents could be adversely affected by changes in patent laws, laws in certain foreign jurisdictions that may not effectively protect our IP rights or by ineffective enforcement of laws in such jurisdictions. Competitors may also develop technologies that are protected by patents and other IP and therefore either be unavailable to us or be made available to us subject to adverse terms and conditions. We have in the past used our patent portfolio to negotiate broad patent cross-licenses with many of our competitors enabling us to design, manufacture and sell semiconductor products, without concern of infringing patents held by such competitors. We may not in the future be able to obtain such licenses or other rights to protect necessary IP on favorable terms for the conduct of our business, and such failure may adversely impact our results of operations. Such cross-license agreements expire from time to time and there is no assurance that we can or we will extend them.

We have from time to time received, and may in the future receive, communications alleging possible infringement of third-party patents and other IP rights. Some of those claims are made by so-called non-practicing entities against which we are unable to assert our own patent portfolio to lever licensing terms and conditions. Competitors with whom we do not have patent cross-license agreements may also develop technologies that are protected by patents and other IP rights and which may be unavailable to us or only made available on unfavorable terms and conditions. We may therefore become involved in costly litigation brought against us regarding patents and other IP rights. IP litigation may also involve our customers who in turn may seek indemnification from us should we not prevail and/or who may decide to curtail their orders for those of our products over which claims have been asserted. Such lawsuits may therefore have a material adverse effect on our business. We may be forced to stop producing substantially all or some of our products or to license the underlying technology upon economically unfavorable terms and conditions or we may be required to pay damages for the prior use of third-party IP and/or face an injunction.

The outcome of IP litigation is inherently uncertain and may divert the efforts and attention of our management and other specialized technical personnel. Such litigation can result in significant costs and, if not resolved in our favor, could materially and adversely affect our business, financial condition and results of operations.

We operate in many jurisdictions with highly complex and varied tax regimes. Changes in tax rules, new or revised legislation or the outcome of tax assessments and audits could cause a material adverse effect on our results.

We operate in many jurisdictions with highly complex and varied tax regimes. Changes in tax rules, new or revised legislation or the outcome of tax assessments and audits could have a material adverse effect on our results.

In 2021, the OECD and the G20 inclusive framework on BEPS agreed to a two-pillar solution to address the tax challenges arising from the digitalization of the economy. Pillar I is a set of proposals to revisit tax allocation rules in a changed economy. The intention is that a portion of a multinationals' residual profit is taxed in the jurisdiction where revenue is sourced.

Pillar II enforces a global minimum corporate income tax at an effective rate of 15% for large multinationals. On December 20, 2021 the OECD published the Global Anti-Base Erosion Model Rules ("GloBe Rules") for Pillar II. On December 22, 2021, the European Commission published a legislative proposal for Pillar II ("Pillar II").

On December 15, 2022, the Council formally adopted Pillar II. TPillar II aims at consistently implementing among all 27 member states the GloBe Rules. The majority of the EU Member States transposed Pillar II into their national laws and started applying the Pillar II measures as from the fiscal years beginning on or after December 31, 2023. The Netherlands transposed the Pillar II into its national legislation with effect from December 31, 2023 pursuant to the Dutch Minimum Tax Act 2024 (*Wet minimumbelasting 2024*). On January 15, 2025, the OECD published new guidance for which we are currently assessing the potential impact. We are continuously monitoring the EU Pillar II legislation and related guidance, which are still evolving and may have an impact on our EU Pillar II tax charge in future periods.

The tax impact of the Pillar I rules is monitored to determine the potential effect on our results and to ensure compliance when the legislation is effective.

Our tax rate is variable and depends on changes in the level of operating results within various local jurisdictions and on changes in the applicable taxation rates of these jurisdictions, as well as changes in estimated tax provisions due to new events. We currently receive certain tax benefits or benefit from net operating losses cumulated in prior years in some countries, and these benefits may not be available in the future due to changes in the local jurisdictions or credits on net operating losses being no longer available due to either full utilization or expiration of the statute of limitations in such jurisdictions. As a result, our effective tax rate could increase and/or our benefits from carrying forward net operating losses could affect our deferred tax assets in certain countries in the coming years. In addition, the acquisition or divestiture of businesses in certain jurisdictions could materially affect our effective tax rate.

We evaluate our deferred tax asset position and the need for a valuation allowance on a regular basis. The ultimate realization of deferred tax assets is dependent upon, among other things, our ability to generate future taxable income that is sufficient to utilize in certain jurisdictions loss carry-forwards or tax credits before their expiration. The recorded amount of total deferred tax assets could be reduced, which could have a material adverse effect on our results of operations and financial position, if our estimates of projected future taxable income and benefits from available tax strategies are reduced as a result of a change in business condition or in management's plans or due to other factors, such as changes in tax laws and regulations.

We are subject to the possibility of loss contingencies arising out of tax claims, assessment of uncertain tax positions and provisions for specifically identified income tax exposures. We are also subject to tax audits in certain jurisdictions. There can be no assurance that we will be successful in resolving potential

tax claims that result from these audits, which could result in material adjustments in our tax positions. We record provisions on the basis of the best current understanding; however, we could be required to record additional provisions in future periods for amounts that cannot currently be assessed. Our failure to do so and/or the need to increase our provisions for such claims could have a material adverse effect on our results of operations and our financial position.

Our operating results can vary significantly due to impairment of goodwill, other intangible assets and equity investments booked pursuant to acquisitions and the timeframe required to foster and realize synergies thereof, joint venture agreements and the purchase of technologies and licenses from third parties, as well as to impairment of tangible assets due to changes in the business environment. Because the market for our products is characterized by rapidly changing technologies, significant changes in the semiconductor industry, and the potential failure of our business initiatives, our future cash flows may not support the value of goodwill, tangible assets and other intangibles registered in our consolidated balance sheets.

We receive public funding, and a reduction in the amount available to us or demands for repayment could increase our costs and impact our results of operations.

We have in the past obtained public funding, primarily to support our proprietary R&D for technology investments and investments in cooperative R&D ventures, and expect to obtain public funding in the future, mainly from EU member states (including France, Italy and Malta) as well as from China. The public funding we receive is subject to periodic review by the relevant authorities and there can be no assurance that we will continue to benefit from such programs at current levels or that sufficient alternative funding will be available if we lose such support. If any of the public funding programs we participate in are curtailed or discontinued and we do not reduce the relevant R&D or other costs, this could have a material adverse effect on our business. Furthermore, to receive public funding, we enter into agreements which require compliance with extensive regulatory requirements and set forth certain conditions relating to the funded programs. If we fail to meet the regulatory requirements or applicable conditions, we may, under certain circumstances, be required to refund previously received amounts, which could have a material adverse effect on our results of operations. If there are changes in the public funding we receive this could increase the net costs for us to, amongst others, continue investing in R&D at current levels and could result in a material adverse effect on our results of operations.

A change in the landscape in public funding may also affect our business. For example, the European Chips Act which entered into force on September 21, 2023 and is designed to bolster Europe's competitiveness and resilience in semiconductor technologies and applications and any similar proposals in other regions, may provide public funding towards manufacturing activities of semiconductors. It is yet to be seen whether this would impact the amount of public funding currently available to us for our R&D or other investments and ventures, but any reduction in said funding will result in a material adverse effect on our results of operations. Further, this may result in new or existing competitors benefiting from such funding and could also have an impact on the competitive landscape in our industry.

Some of our production processes and materials are environmentally sensitive, which could expose us to liability and increase our costs due to environmental, health and safety laws and regulations or because of damage to the environment.

We are subject to various laws and regulations, as well as increasing focus from our stakeholders regarding EHS matters, including the use, storage, discharge and disposal of chemicals, gases and other hazardous substances used in our operations. Addressing such focus from stakeholders, as well as compliance with such laws and regulations could adversely affect our manufacturing costs or product sales by requiring us to acquire costly equipment, materials or GHG allowances, or to incur other significant expenses in adapting our manufacturing processes or waste and emission disposal processes. In addition, we are working towards transitioning into an increasingly circular economy model through which we aim to continue to reduce our waste, and increase the use of recycled raw materials in our

manufacturing processes. Failure to successfully implement such a model, or a reduction in stakeholder interest in circular economy models, may result in increased costs and stakeholder dissatisfaction.

Separately, several jurisdictions have recently sought to restrict the use of certain substances found in process chemicals, parts, components and other materials used in semiconductor manufacturing and which have limited technically and commercially feasible alternatives. Any such restriction in our ability to access materials necessary for the manufacturing of our products may adversely affect our results of operations. Furthermore, environmental claims or our failure to comply with present or future regulations could result in the assessment of damages or imposition of fines against us, suspension of production or a cessation of operations. Failure by us to control the use of, or adequately restrict the discharge of, chemicals or hazardous substances could subject us to future liabilities.

Climate change, increased focus on social impact, and related sustainability regulations and initiatives, including our commitment to become carbon neutral in all direct and indirect emissions (scopes 1 and 2), product transportation, business travel, and employee commuting emissions (our scope 3 focus), and to achieve our 100% renewable electricity sourcing goal by the end of 2027, could place additional burden on us and our operations.

As climate change issues become more pronounced, we may correspondingly face increased regulation and also expectations from our stakeholders to take actions beyond existing regulatory requirements to minimize our impact on the environment and mitigate climate change related effects. The semiconductor manufacturing process has historically contributed to direct GHG emissions by utilizing perfluorocarbons, which may lead to new or increased regulation of such compounds. In order to address such regulation, we may be required to adapt our production processes or purchase additional equipment or carbon offsets, leading to increased costs. We are on track to be carbon neutral in all direct and indirect emissions (scopes 1 and 2), product transportation, business travel, and employee commuting emissions (our scope 3 focus), and to achieve our 100% renewable electricity sourcing goal by the end of 2027.

To meet these additional regulatory requirements, expectations, and goals, we will need to continue to deploy additional equipment, introduce process changes, utilize alternative suppliers and materials, and take other similar actions, some or all of which may require us to incur additional costs which could result in a material adverse effect on our results of operations and our financial condition. To address climate change mitigation of our own operations, we may resort to purchasing renewable energy, and purchasing carbon credits. In addition, if we fail to meet these requirements, expectations, or goals, or foster additional sustainability initiatives, we may experience reputational risk which could impact our ability to attract and retain customers, employees, and investors.

Further, our sites, as well as those of our partners along the supply chain, may be exposed to changing and/or increasing physical risks resulting from climate change that are either chronic (induced by longer-term shifts in climate patterns, such as sea level rise or constraints in the availability of water, changing temperature, wind or precipitation patterns) or acute (event-driven such as cyclones, hurricanes or heat waves). In the context of the transition to a lower-carbon economy, we will likely be exposed to further policy, legal, technology, and market transition risks. We have already seen further policy developments in this area in the form of Regulation (EU) 2020/852 of the European Parliament and of the Council of June 18, 2020 on the establishment of a framework to facilitate sustainable investment and amending Regulation (EU) 2019/2088 (the “EU Taxonomy Regulation”), which entered into force on July 12, 2020. As a result of the EU Taxonomy Regulation, we must disclose information on how and to what extent our activities are associated with economic activities that qualify as environmentally sustainable.

Enhanced focus on issues concerning the protection of human rights, labor laws, environmental justice and climate change are resulting in a more complex regulatory environment, leading to potential additional legal risks, penalties or taxes. Directive (EU) 2022/2464 of the European Parliament and of the Council of December 14, 2022 amending Regulation (EU) No 537/2014, Directive 2004/109/EC, Directive 2006/43/EC and Directive 2013/34/EU, as regards corporate sustainability reporting (the “CSRD”), which entered into force on January 5, 2023, strengthens the rules regarding social and environmental information that is required to be reported.

The CSRD seeks to provide investors and other stakeholders with access to the information they need to assess investment risks arising from climate change, social impact, and other sustainability topics, including mandatory supply chain due diligence requirements and new third-party assurance obligations. Should our partners not comply with current regulations, their performance may detrimentally impact our own results on climate change mitigation, social impact, energy efficiency, water use, chemicals and pollution management, or waste disposal. Moreover, if our partners are unable to meet our climate change, social impact and sustainability criteria, we may engage with alternative partners at a higher cost.

The requirements of the CSRD are likely to overlap in scope and diverge in content with the rules of other jurisdictions to which we may be subject. If our disclosure metrics relating to climate change and other sustainability topics are lower than those of our peers in the industry, or are otherwise regarded as insufficient, this may lead to reputational risk which may lead to onward financial repercussions such as a decrease in share price or difficulty in raising capital.

This enhanced focus and increased regulations and initiatives, as well as related stakeholder expectations, have been and may continue to be subject to rapid and extensive change or reversal, and have resulted and may result in conflicts between regulatory regimes and stakeholders.

Individual customer use of certain products, which may differ from the anticipated uses of such products and result in differences in performance, including energy consumption, may lead to a failure to achieve our disclosed emission-reduction goals, adverse legal action or additional research costs.

Our standard terms and conditions of sale state that our products are not intended for certain uses. Our calculations for the anticipated GHG emissions reductions from the use of our products are based on certain common but significant assumptions, such as that all products are powered by grid electricity. Misuse of our products, or any deviation from our products' anticipated uses, could result in difference in performance, decrease in product lifespan, product malfunction, and an increase in energy consumption. Any such instances of misuse may lead to a failure to achieve our disclosed emission-reduction goals, adverse publicity, and may lead to legal action.

Loss of key employees and the inability to continuously recruit and retain qualified employees could hurt our competitive position.

Our success depends to a significant extent upon our key executives and R&D, engineering, marketing, sales, manufacturing, support and other personnel. Our success also depends upon our ability to continue to identify, attract, retain and motivate highly trained and skilled engineering, technical and professional personnel in a competitive recruitment environment, as well our ability to ensure the smooth succession and continuity of business with newly hired and promoted personnel. For instance, in highly specialized areas, it may become more difficult to retain employees.

Our employee hiring and retention also depend on our ability to build and maintain a diverse and inclusive workplace culture and be viewed as an employer of choice. We intend to continue to devote significant resources to recruit, train and retain qualified employees, however, we may not be able to attract, obtain and retain these employees, which may affect our growth in future years and the loss of the services of any of these key personnel without adequate replacement or the inability to attract new qualified personnel could have a material adverse effect on us.

The interests of our controlling shareholder, which is in turn indirectly controlled by the French and Italian governments, may conflict with other investors' interests. In addition, our controlling shareholder may sell our existing common shares or issue financial instruments exchangeable into our common shares at any time.

We understand that as of December 31, 2024, STMicroelectronics Holding N.V. ("ST Holding"), owned 250,704,754 shares, or approximately 27.5%, of our issued common shares. ST Holding may therefore be in a position to effectively control the outcome of decisions submitted to the vote at our shareholders' meetings, including but not limited to the appointment of the members of our Managing and Supervisory Boards (the "Managing Board" and the "Supervisory Board", respectively).

We have been informed that ST Holding's shareholders, each of which is ultimately controlled by the French or Italian government, are party to a shareholders agreement (the "STH Shareholders Agreement"), which governs relations between them. We are not a party to the STH Shareholders Agreement. The STH Shareholders Agreement includes provisions requiring the unanimous approval by the shareholders of ST Holding before ST Holding can vote its shares in our share capital, which may give rise to a conflict of interest between our interests and investors' interests, on the one hand, and the (political) interests of ST Holding's shareholders, on the other hand. Our ability to issue new shares or other securities giving access to our shares may be limited by ST Holding's desire to maintain its shareholding at a certain level and our ability to buy back shares may be limited by ST Holding due to a Dutch law requiring one or more shareholders acquiring 30% or more of our voting rights to launch a tender offer for our outstanding shares.

The STH Shareholders Agreement also permits our respective French and Italian indirect shareholders to direct ST Holding to dispose of its stake in us at any time, thereby reducing the current level of their respective indirect interests in our common shares. Sales of our common shares or the issuance of financial instruments exchangeable into our common shares or any announcements concerning a potential sale by ST Holding could materially impact the market price of our common shares depending on the timing and size of such sale, market conditions as well as a variety of other factors.

Our shareholder structure and our preference shares may deter a change of control.

We have an option agreement in place with an independent foundation, whereby the foundation can acquire preference shares in the event of actions which the board of the independent foundation determines would be contrary to our interests, our shareholders and our other stakeholders and which in the event of a creeping acquisition or offer for our common shares are not supported by our Managing Board and Supervisory Board. In addition, our shareholders have authorized us to issue additional capital within the limits of the authorization by our AGM, subject to the requirements of our Articles of Association, without the need to seek a specific shareholder resolution for each capital increase. Accordingly, an issue of preference shares or new shares may make it more difficult for a shareholder to obtain control over our general meeting of shareholders. These anti-takeover provisions could substantially impede the ability of our shareholders to benefit from a change in control and, as a result, may materially adversely affect the market price of our ordinary shares and our investors' ability to realize any potential change of control premium.

Any decision to reduce or discontinue paying cash dividends to our shareholders could adversely impact the market price of our common shares.

On an annual basis, our Supervisory Board, upon the proposal of the Managing Board, may propose the distribution of a cash dividend to the general meeting of shareholders. Any reduction or discontinuance by us of the payment of cash dividends at historical levels could cause the market price of our common shares to decline.

We are required to prepare financial statements under IFRS and we also prepare Consolidated Financial Statements under U.S. GAAP, and such dual reporting may impair the clarity of our financial reporting.

We use U.S. GAAP as our primary set of reporting standards. Applying U.S. GAAP in our financial reporting is designed to ensure the comparability of our results to those of our competitors, as well as the continuity of our reporting, thereby providing our stakeholders and potential investors with a clear understanding of our financial performance. As we are incorporated in The Netherlands and our shares are listed in Europe on Euronext Paris and on the Borsa Italiana, we are subject to EU regulations requiring us to also report our results of operations and financial statements using IFRS.

As a result of the obligation to report our financial statements under IFRS, we prepare our results of operations using both U.S. GAAP and IFRS, which are currently not consistent. Such dual reporting can materially increase the complexity of our financial communications. Our financial position and results of operations reported in accordance with IFRS will differ from our financial position and results of operations reported in accordance with U.S. GAAP, which could give rise to confusion in the marketplace.

There are inherent limitations on the effectiveness of our controls.

There can be no assurance that a system of internal control over financial reporting, including one determined to be effective, will prevent or detect all misstatements. A control system, no matter how well designed and operated, can provide only reasonable, not absolute, assurance regarding financial statement preparation and presentation. Projections of the results of any evaluation of the effectiveness of internal control over financial reporting into future periods are subject to inherent risk. The relevant controls may become inadequate due to changes in circumstances or the degree of compliance with the underlying policies or procedures may deteriorate.

Because we are subject to the corporate law of The Netherlands, U.S. investors might have more difficulty protecting their interests in a court of law or otherwise than if we were a U.S. company.

Our corporate affairs are governed by our Articles of Association and by the laws governing corporations incorporated in The Netherlands. The rights of our investors and the responsibilities of members of our Managing and Supervisory Boards under Dutch law are not as clearly established as under the rules of some U.S. jurisdictions. Therefore, U.S. investors may have more difficulty in protecting their interests in the face of actions by our management, members of our Managing and Supervisory Boards or our controlling shareholders than U.S. investors would have if we were incorporated in the United States.

Our executive offices and a substantial portion of our assets are located outside the United States. In addition, ST Holding and most members of our Managing and Supervisory Boards are residents of jurisdictions other than the United States. As a result, it may be difficult or impossible for shareholders to effect service within the United States upon us, ST Holding, or members of our Managing or Supervisory Boards. It may also be difficult or impossible for shareholders to enforce outside the United States judgments obtained against such persons in U.S. courts, or to enforce in U.S. courts judgments obtained against such persons in courts in jurisdictions outside the United States. This could be true in any legal action, including actions predicated upon the civil liability provisions of U.S. securities laws. In addition, it may be difficult or impossible for shareholders to enforce, in original actions brought in courts in jurisdictions located outside the United States, rights predicated upon U.S. securities laws.

We have been advised by Dutch counsel that the United States and The Netherlands do not currently have a treaty providing for reciprocal recognition and enforcement of judgments (other than arbitration awards) in civil and commercial matters. With respect to choice of court agreements in civil or commercial matters, it is noted that the Hague Convention on Choice of Court Agreements entered into force in The Netherlands, but has not entered into force in the United States. As a consequence, a final judgment for the payment of money rendered by any federal or state court in the United States based on civil liability, whether or not predicated solely upon the federal securities laws of the United States, will not be enforceable in The Netherlands. However, if the party in whose favor such final judgment is rendered brings a new suit in a competent court in The Netherlands, such party may submit to The Netherlands court the final judgment that has been rendered in the United States. If The Netherlands court finds that

the jurisdiction of the federal or state court in the United States has been based on grounds that are internationally acceptable and that proper legal procedures that are in accordance with the Dutch standards of proper administration of justice including sufficient safeguards (*behoorlijke rechtspleging*) have been observed, the court in The Netherlands would, under current practice, in principle give binding effect to the final judgment that has been rendered in the United States unless such judgment contradicts The Netherlands' public policy and provided that the judgment by the foreign court is not incompatible with a decision rendered between the same parties by a Dutch court, or with a previous decision rendered between the same parties by a foreign court in a dispute that concerns the same subject and is based on the same cause, provided that the previous decision qualifies for acknowledgment in The Netherlands. Even if such a foreign judgment is given binding effect, a claim based thereon may, however, still be rejected if the foreign judgment is not or no longer formally enforceable.

3.3.1.3. Managing risk according to our risk appetite strategy

Risk management activities are governed by our risk appetite strategy, which is discussed annually at the Supervisory Board and audit committee (our "Audit Committee") levels.

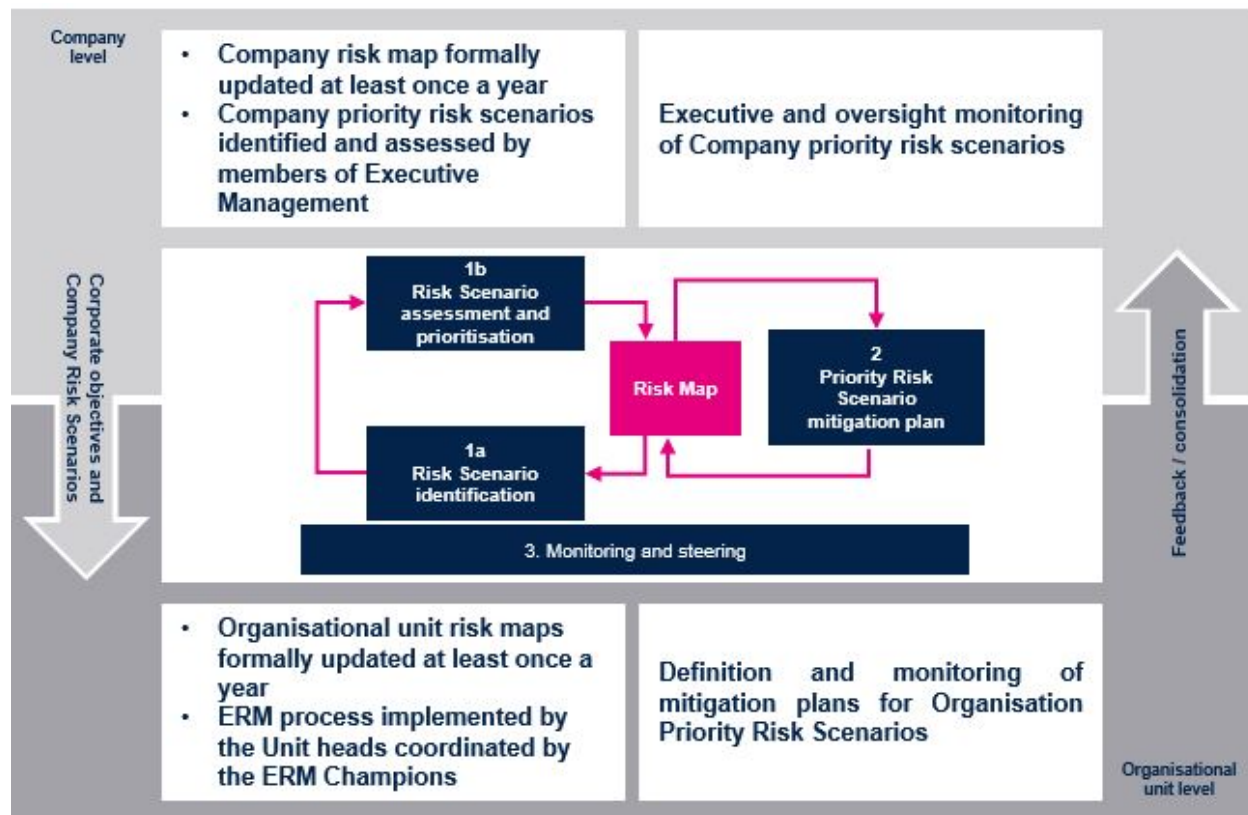

We determine the amount of risk we are willing to pursue or retain, depending on associated expected rewards, opportunities, and costs.

Our risk appetite strategy depends on the nature of risks. As an illustration, we strive to reduce residual exposure to a level as low as reasonably practicable for the following risk categories:

- corporate governance;
- product quality;
- operations resilience (internal events);
- protection of IP and other sensitive information;
- people, health and safety;
- compliance with environmental regulations and commitments;
- adherence to our Code of Conduct (the "Code of Conduct") and complying with applicable laws and regulations; and
- protection against cyber threats.

ERM process

The embedded ERM process takes a holistic view, combining both company-wide top-down and bottom-up perspectives, to ensure that specific risk scenarios are addressed at the right level. The process is implemented as described in the following chart:

During 2024, we refreshed our Company risk assessment with the executive management team. The output from this exercise was a risk map linked to our strategic objectives, including ten redefined 'priority 1' risk scenarios.

Risk owners (members of our Senior Management, which consists of our Executive Committee and Executive Vice Presidents (the "Executive Committee" and our "Executive Vice Presidents" or "Vice Presidents", respectively, and together, "Senior Management") as detailed in Section 5.4. (*Corporate Governance - Managing Board*)) were appointed for each priority risk area to develop risk response plans, adapt to changing external conditions and enhance monitoring capabilities. The risk response plans are regularly reviewed by our Executive Committee and periodically discussed with the Audit Committee of the Supervisory Board.

Each of our organizational units completes its own risk assessment. This includes marketing and sales regions, product groups, manufacturing and technology, and corporate functions. In addition, we implemented further risk assessments on large company programs, including transformation programs.

3.3.1.4. Illustrative risk management measures

Corporate governance

Our adherence to the good principles of corporate governance is outlined in Section 5.1. (*Corporate Governance - Commitment to the principles of good corporate governance*). The Supervisory Board and

its committees, and the Managing Board, through their structures, charters and activities ensure proper corporate governance as described in Section 5 (*Corporate Governance*).

Product quality

Quality is a key value and priority for us. Our vision is to elevate ST to the highest level of quality as an asset for our customers. We can achieve a high level of quality because our employees and management are committed to quality, focused on customer's targets, and improvement programs are effective.

Global Quality and Reliability ("GQR") is organized at Company level and embedded in all our organizations. The GQR leadership team brings together quality directors from across our entire business operations (front-end and back-end manufacturing, product groups, sales regions and corporate organizations) to deploy our quality strategy and quality programs throughout the Company.

We are continuously adapting to have the necessary advanced and innovative infrastructure and organization to ensure our products meet the highest quality and reliability requirements in the markets we address.

Our quality governance is based on our quality management system, part of our enterprise management system, as documented in our quality manual. It details how we implement processes allowing to meet the highest customer and standards requirements.

We adhere to internationally recognized quality management standards. We received our first company wide ISOTS16949 certification in 2003 and this certification was renewed every three years since that time. Since 2018, we have been certified IATF 16949:2016 and ISO 9001:2015 demonstrating our robust quality governance, effective quality management system and quality compliance across the Company. In 2024, we were certified ISO SAE 21434 confirming that we established a certified management system and governance which meets and complies with the requirements of the automotive industry in the field of cybersecurity process management within product development phases.

Operations resilience

We have extended our risk approach to encompass a dedicated Resilience Management System ("RMS"), including both business continuity and crisis management, and addressing the following dimensions:

- continuity of the main sites;
- manufacturing flexibility across internal and/or external sites;
- continuity of full supply chain including third parties;
- managing the business continuity and crisis communication to clients and other stakeholders; and
- improving company-wide capability to respond to crises.

In 2024, as per our multi-year improvement roadmap, we further embedded our RMS in our main sites and selected organizational units, leveraging our corporate resilience competence center and a global network of resilience champions. We deployed incremental improvements to our RMS (fully aligned methodologies and toolkits across ERM, resilience, business continuity and crisis management). It provides a consistent methodology to address potential business disruptions of our resources, such as:

- site unavailability;
- people unavailability;
- IT system disruptions (e.g. cyber-attacks); and
- critical sourcing and logistics/transportation disruptions.

As such, we address scenarios that may affect our supply chain and operations such as pandemics, natural hazards (such as earthquakes, floods, snowstorms, volcanic eruptions or tsunamis), industrial accidents (such as fires and explosions), facilities/energy interruptions and major impacts related to human activities (such as geo-political tensions, terrorism or strikes).

We continued to enhance a company-specific methodology underpinning a global dashboard: a range of relevant indicators based on internal or external standards, covering dimensions such as exposure to natural hazards, loss prevention characteristics, facilities robustness, equipment modernization and redundancy, IT infrastructure quality and cyber protection. For every significant site, those indicators are compiled in our site resilience index, which is updated on a quarterly basis. Annually, site management teams prepare and update a site improvement plan accordingly.

We have been ISO 22301 (Security and Resilience) certified since 2016. Our continuous improvements have been subjected to both internal audits and external surveillance audits from the certification body.

Protection of IP and other sensitive information

We have processes and procedures in place to protect our IP and other sensitive information. This includes a dedicated team of global patent attorneys and patent engineers who harvest and collect inventions generated through our R&D efforts, chair and manage patent committees to determine patent filing strategies and oversee the filing and issuance of our more than 21,000 active and pending patents worldwide. As part of this process, we offer incentive awards to our inventor community to help ensure their active and on-going participation in protecting this innovation. The patent committees also regularly make decisions on which inventions are better maintained as our confidential or sensitive information. For any information which we deem as confidential or sensitive, we have processes and procedures which restrict any disclosure of such information to any third-party without having in place appropriate measures such as a non-disclosure agreement. We further secure our IP and sensitive information through the administration of our corporate IT security policies and procedures.

People, health and safety

Our approach to protecting the health and safety of our employees and onsite value chain workers is outlined in Section 3.4.4. (*Sustainability statement - Social*).

Compliance with environmental regulations and commitments

Our approach to managing our Company in an environmentally responsible way is outlined in Section 3.4.3. (*Sustainability statement - Environment*).

Adherence to our Code of Conduct and complying with applicable laws and regulations

We believe that conducting our business with the highest standard of integrity is essential to our long term success, and that compliance and ethics is everyone's job and responsibility.

Our Code of Conduct embodies our values and principles, which are shared throughout the Company. ST Code of Conduct serves as the highest reference for guiding our behavior, decision-making, and activities. Our values are:

- integrity: we conduct our business with the highest ethical standards, honor our commitments, deliver on our promises, are loyal and fair, and stand up for what is right.
- people: we behave with openness, trust and simplicity; we are ready to share our knowledge, encourage everyone's contribution, develop our people through empowerment, teamwork and

training; each one of us is committed and personally involved in the continuous improvement process; and

- excellence: we strive for quality and customer satisfaction and create value for all our partners; we are flexible, encourage innovation, develop our competences, seek responsibility and are accountable for our actions; we act with discipline, base our decisions on facts, and focus on the priorities.

Further information on our approach to conducting business with the highest standard of integrity is outlined in Section 3.4.5. (*Sustainability statement - Business conduct*).

Protection against cyber threats

Cybersecurity risk management is an integral part of the overarching risk framework and seeks to identify and address fast-evolving cybersecurity threats. The management of cybersecurity risks is governed by the Executive Committee and receives regular oversight from the Audit Committee as a standing item.

We have a specialized Information Security team within the wider Digital Transformation and Information Technology department of the Company, which covers the following:

- program definition and steering;
- framework, which include third-party security;
- awareness and training campaigns;
- architecture and engineering;
- protection of business applications;
- protection of business solutions (R&D, manufacturing and industrial solutions, business applications);
- protection of IT infrastructures;
- cybersecurity operations (such as risk-based vulnerability management); and
- detection and reactions to information security incidents, as part of the wider crisis management process.

In particular, within our Information Security team, the Cybersecurity Incident Response Team monitors on a continuous basis the evolving cyber threats, and detect and analyze incidents. Based on their initial assessments, any significant risk is escalated and would, if required, trigger the assembly of a CCT. This CCT would lead the Company response (e.g. containment, forensic investigation, system restoration, and any associated business impact). The CCT would periodically inform the Executive Committee of any developments, and the Executive Committee would in-turn keep the Audit Committee and Supervisory Board informed.

In addition, we created a Third-Party Management function within our Global Procurement Organization, with the aim to embed cybersecurity risks in the overall management of third parties.

The maturity of our overall risk framework design and implementation, which includes cybersecurity risks, is periodically audited by a leading independent organization. In 2024, an independent third-party performed a cybersecurity maturity assessment. The results and associated improvement plan were presented to Executive Committee as well as to the Audit Committee of the Supervisory Board.

Furthermore, we have been ISO 22301 (Security and Resilience) certified since 2016. Throughout 2024, our continuous improvements have been subjected to both internal audits and external surveillance audits from the certification body. We have also been certified ISO SAE 21434 (Road Vehicles – Cybersecurity Engineering) since 2022, confirming that we established a certified management system and governance

which meets and complies with the requirements of the automotive industry in the field of cybersecurity process management within product development phases.

3.3.1.5. Risks having had a significant financial impact during 2024

In 2024, no single risk event had a negative material impact on the Company's financial results.

3.3.2. Internal Control

Our Managing Board is responsible for ensuring that we comply with applicable legislations and regulations. As such, under the guidance of our Chief Financial Officer, we have established and implemented internal financial risk management and control systems. These controls and procedures are based on identified risk factors that could potentially influence our operations and financial objectives and contain a system of monitoring, reporting and operational reviews.

We regularly evaluate the effectiveness of our internal controls and procedures and correspondingly advise our Audit Committee on the results of such evaluations, any changes to such internal controls and procedures, as well as any significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting, which are reasonably likely to affect our ability to record, process or summarize and report financial information to our auditors and to our Audit Committee. Likewise, any fraud, whether or not material, that involves management, or other employees who have a significant role in our internal control over financial reporting, are disclosed to our external auditors and to our Audit Committee, which informs our Supervisory Board.

We have established policies and procedures which set forth principles, business rules of behavior and conduct which are considered to be consistent with proper business management, in line with our mission and strategic objectives, such as our Code of Conduct.

We have adopted policies and procedures to describe the operational flow of actions to perform a task or activity, or to implement a policy within a given functional field. We have a large number of corporate procedures which cover a wide range of activities such as approvals, authorizations, verifications, reconciliations, review of operating performance, security of assets and segregation of duties, which are deployed throughout the Company.

Our internal audit organization (our "Corporate Audit") is independent of our management. Its primary objective is to enhance and protect organizational value by providing risk-based and objective assurance, advice, and insights.

Internal audit plans are developed by Corporate Audit and apply a risk-based approach. They are reviewed annually by our Audit Committee and approved by our Supervisory Board. Each year, the internal audit plan includes audit assignments covering a variety of organizational units, processes and risks.

Corporate Audit performs its activities in accordance with the International Standards for the Professional Practice of Internal Auditing, published by the Institute of Internal Auditors.

Based on the information included in this Section 3.3. (*Report of the Managing Board - Risk management and internal control*) and the outcome of the aforementioned measures, the Managing Board states that to the best of its knowledge: (i) the internal risk management and control systems in place provide a reasonable assurance that the Company's financial reporting does not include any errors of material importance as of and for the 2024 financial year; (ii) in relation to the Company's financial reporting these systems operated effectively during 2024; (iii) it is justified that the financial reporting is prepared on a going concern basis; and (iv) the report states those material risks and uncertainties that are relevant to the expectation of the Company's continuity for the period of twelve months after the preparation of the report.

Our internal risk management and control systems, including the structure and operation thereof, were discussed and evaluated on several occasions with our Audit Committee, and also discussed by our Supervisory Board, during 2024 (in accordance with best practice provision 1.4.1 of the Dutch Corporate Governance Code).

3.4. Sustainability statement

3.4.1 Introduction

As an IDM providing semiconductor devices, we handle most manufacturing in-house. We have over 50,000 employees and manufacturing sites worldwide. The manufacturing of semiconductor devices requires natural resources, use of water, use of chemicals, and is labor-intensive. Our strategy and business model take into account the material impacts we may have on the environment, our own workforce, our supply chain workers and our affected communities.

ST sustainability approach

Sustainability has been a guiding principle at ST for more than 30 years.

Sustainability is embedded in our activities. We implement programs and take action to manage our impacts, opportunities, and risks within our own operations and relevant sections of our value chain. We put people first, prioritize health and safety, well-being and human and labor rights. We strive to minimize our impact on the environment by, *inter alia*, reducing our GHG emissions, reducing energy consumption as well as addressing water and waste related challenges.

At the heart of our strategy is a strong focus on identifying topics that matter to our business and stakeholders, through a double materiality assessment, which includes a review with our key stakeholders. Based on this double materiality assessment, taking into account the perspectives of our stakeholders, our sustainability strategy, policies, programs, targets and objectives are regularly reviewed and adjusted as appropriate with the aim to cover identified material sustainability topics.

Relevant ST sites are ISO certified (e.g. ISO 45001: international standard for an occupational health and safety management system; ISO 14001: international standard for environmental management system and ISO 50001: international standard for energy management system) and EMAS validated, with regard to the management systems in place relating to addressing relevant sustainability topics as further indicated in Appendix 11.8.

We are a full member of the Responsible Business Alliance ("RBA"), an industry coalition dedicated to responsible business conduct in global supply chains, and as such we participate in the collective efforts of the industry to formulate solutions to global sustainability challenges. Our policies are aligned with the RBA Code of Conduct. The RBA Code of Conduct aligns with relevant internationally recognized standards and instruments, including OECD Guidelines for Multinational Enterprises, UN Guiding Principles on Business and Human Rights, UN Universal Declaration of Human Rights, ILO Declaration on Fundamental Principles and Rights at Work, ILO Fundamental Conventions.

We are included in several sustainability indices, such as Dow Jones Sustainability Index World and Europe indices, and the Euronext Vigeo Eiris Europe 120 index. In 2024, we were rated MSCI AAA⁽¹⁾, ISS ESG Prime, Ecovadis Platinum, FTSE4Good top 10%, Bloomberg top 5%. For 2024 we received an A score from the CDP for climate change, and an A- score from the CDP for water security. We have been a signatory of the United Nations ("UN") Global Compact since 2000. Our sustainability programs are aligned with its ten principles and contribute to 11 of the 17 UN Sustainable Development Goals ("SDG").

⁽¹⁾ The use by ST of any MSCI ESG RESEARCH LLC or its affiliates ("MSCI") data, and the use of MSCI logos, trademarks, service marks or index names herein, do not constitute a sponsorship, endorsement, recommendation, or promotion of ST by MSCI. MSCI services and data are the property of MSCI or its information providers and are provided 'as-is' and without warranty. MSCI names and logos are trademarks or service marks of MSCI.

CSRD

On January 5, 2023, the CSRD entered into force. The CSRD modernizes and strengthens the rules about the social and environmental information that companies have to report, and aims to ensure that investors and other stakeholders have access to the information they need to assess investment risks arising from climate change and other sustainability topics. Based on the CSRD, we would be required to report on the way we operate and manage social and environmental challenges. In connection with these reporting obligations we would be required to formulate long-term sustainability targets, policies, strategic plans and to conduct due diligence for our own operations and supply chain. Under the CSRD, further transparency rules are introduced on division of roles and responsibilities within the Company for the management of material sustainability matters. The CSRD would also make it mandatory for companies to have third-party assurance on the sustainability information that they report. The European Sustainability Reporting Standards ("ESRS") requires disclosure on detailed information on environmental protection, social responsibility and treatment of employees, respect for human rights, anti-corruption, bribery and on equal treatment.

Being a Directive, all EU Member States and EEA countries are required to implement the CSRD into domestic law. The deadline for such implementation was July 6, 2024. While certain EU member states have implemented the CSRD into domestic law, the Netherlands, has not done so yet. The legislative proposal to implement the CSRD into Dutch law was submitted to the second chamber of Dutch Parliament on January 13, 2025, for parliamentary proceedings. At the date hereof, there is no certainty on the effective date of the implementation of the CSRD into Dutch law. As we are a company incorporated and governed under Dutch law, this means that we are not legally required to report in accordance with the CSRD with respect to 2024. However, considering the current status of the CSRD implementation in the Netherlands, we have prepared our sustainability statement based on the general principles of the CSRD. Our sustainability statement is included in this section of our Dutch annual report and we will not publish a separate sustainability report. There are no other entities in the ST Group that are legally required to report in accordance with the CSRD for this reporting year.

Our sustainability reporting approach is based on the most recent guidance on the CSRD and we have used estimates and assumptions where appropriate, as further detailed in the relevant sections of this sustainability statement. However, it should be noted, that the Dutch legislation implementing the CSRD is still in draft form and this legislation is still subject to further amendments, guidance and interpretation, and that the CSRD is still under development and its interpretation and application is evolving. Notably, on February 26, 2025, the European Commission issued the first of two omnibus proposals to "cut red tape" and "simplify EU rules for citizens and businesses", which includes proposed changes to the CSRD, such as a reduction of the number of datapoints that need to be included in the sustainability statement (the "Omnibus Proposal"). Taking the aforementioned into account, including that this is the first year that we are reporting under the CSRD, we note that our sustainability reporting approach may change in the coming years.

3.4.2 General sustainability disclosure (ESRS 2)

3.4.2.1 General basis for preparation (ESRS 2 BP 1 and BP 2)

ESRS

As referenced above, this sustainability statement has been drawn up in alignment with the CSRD and is based on the ESRS, with the use of all applicable phase-in options. It contains required disclosures on the material sustainability matters as assessed through a DMA conducted in 2024 ("2024 DMA") and on other matters for which disclosure is required under the ESRS.

Consolidated sustainability statement

ST has prepared this sustainability statement with a detailed review of its consolidated perimeter. As an outcome, the scope of consolidation of this sustainability statement is different than the scope of the financial statement for the environmental data only. The scope for environmental data (metrics from the ESRS E – see Section 3.4.3 (*Sustainability statement - Environment*)) includes our fourteen main manufacturing sites, three large R&D sites and one EWS site. The environmental data from other ST sites is less than 1% of the total. While the goal for future year reporting is to capture the full consolidated perimeter, it has been considered this year that excluding some sites would not change the underlying result.

The qualitative information in this sustainability statement covers ST's own operations and relevant sections of its value chain, based on the outcomes of the 2024 DMA. A description of ST's upstream and downstream value chain is further included in Section 3.4.2.3.A (*Strategy business model and value chain*).

In preparing this sustainability statement no specific information has been omitted, due to it being assessed to be classified or sensitive information, nor has information relating to IP, know-how or the results of innovation, been omitted.

Specific circumstances

Value chain estimation

ST is not reporting any value chain data except with regard to scope 3 GHG emissions, where we have used estimations. In the case of GHG emissions, additional elements regarding the basis of preparation for the scope 3 categories along with the level of accuracy is described in the relevant environmental section.

We note that our ability to receive primary data from suppliers or other value chain partners is highly dependent from the evolution of external requirements, the ability of these stakeholders to calculate and provide the information to us and our variety of partners with operations worldwide. If the availability and quality of information from our value chain partners improve in the future we expect to enhance our methodology for value chain reporting.

Sources of estimation and outcome uncertainty

The preparation of this sustainability statement in accordance with the ESRS requires management to make estimates and assumptions.

The primary areas that required significant estimates and judgements by management include but are not limited to:

- scope 1, 2 and 3 GHG emissions, where any update on the GHG Protocol or emission factor database would have an impact on the total GHG emissions;
- in addition, scope 3 GHG relies on various estimation methods without, at this stage, access to primary data from value chain stakeholders; and
- information on pollution of air and water and the amount of substances of concern and very high concern are dependent on external regulations that are in constant evolution and on current measurement techniques which could evolve over time.

Various data points stem from European regulations, such as the E-PRTR on pollution in Section 3.4.3.2 (*Pollution*), and on the emission trading scheme in Section 3.4.3.1 (*Climate Change*), and Annex III of Directive 2008/98/EC of the European Parliament and of the Council on waste for Section 3.4.3.4 (*Waste and Circular Economy*) where any change either in terms of threshold or categorization would have a direct impact on the amount reported in a fiscal year.

In this first year of reporting under the ESRS, estimates and judgements have been identified for all the disclosed metrics and further described in the relevant sections. When used, they are based on operational considerations linked to our manufacturing footprint, current state of the art in terms of measurement techniques or are driven by industry-specific limitations.

Forward-looking statement

This sustainability statement includes forward-looking statements based on disclosed assumptions about events that may occur in the future and by possible future actions by ST. This includes ambitions, objectives and targets. Estimates and judgments are continually evaluated and are based on historical experience and other factors, including expectations of future events that are believed to be reasonable under current circumstances.

In addition, ST operates on a worldwide basis in an economic environment impacted by many risk factors which generates uncertainties on future economic conditions which might impact ST's forward-looking environmental and social performance.

Any such forward-looking statement involves uncertainties and is subject to change.

Changes in reporting

Since this is the first year that ST reports on a voluntary basis in alignment with the CSRD following the disclosure requirements of the ESRS, the sustainability information in this annual report has been expanded significantly from prior years. We have included new metrics, aligned our disclosures with the definitions from ESRS (unless stated otherwise) and defined certain new targets reflecting the material sustainability matters and related impacts, risks and opportunities identified in this year's materiality assessment. In future sustainability statements, we will report changes compared to this year's statement.

Disclosures stemming from other legislation or generally accepted sustainability reporting pronouncements

We have included information from generally accepted sustainability reporting standards (e.g. GHG Protocol) and legislation (refer to Appendix 11.2) in this sustainability statement.

Incorporation by reference

We used the option to incorporate information in this sustainability statement by reference, as defined in ESRS 1. The information that has been incorporated by reference is included in the table in Appendix 11.1.

We included references to external sources and links to websites (for example st.com) for information purpose only, noting that these references and links are not incorporated by reference into this sustainability statement.

Entity-specific information

All material IROs identified in the 2024 DMA stem from the sustainability topics included in the ESRS. Certain targets we have set, related to these IROs, include entity-specific information, as further described in the disclosure of the relevant target, marked with "entity-specific".

3.4.2.2 Governance

3.4.2.2.A. The role of, information provided to, and sustainability matters addressed by the administrative, management and supervisory bodies (GOV-1)

We have a two-tier governance structure, in accordance with Dutch law. Our management is entrusted to our Managing Board under the supervision of our Supervisory Board.

No representatives of our employees and other workers are included in our administrative, management and supervisory bodies.

Composition of the supervisory body and its responsibilities

Supervisory Board, Sustainability Committee and Audit Committee

Our Supervisory Board consists of nine members, of whom 44% are female and 56% are male. Based on the independence criteria set for the members of our Supervisory Board 100% of its members are considered independent. Further details on the composition and experience of the members of our Supervisory Board can be found in Section 4.1 (*Report of the Supervisory Board - Composition of the Supervisory Board - Biographies*), which includes their personal details and biographies.

Our Supervisory Board is responsible for supervising the policies pursued by our Managing Board and supporting the Managing Board with its advice. The Supervisory Board has a sustainability committee (the "Sustainability Committee") which supports and advises the Supervisory Board in relation to its responsibilities in supervising, monitoring and advising on ST's sustainability strategy, targets, goals and overall sustainability performance.

The responsibilities of the Sustainability Committee, detailed in its charter available on st.com include, but are not limited to:

- monitoring and advising on sustainability policies and practices, including, but not limited to, social and environmental;
- monitoring and assessing sustainability developments and emerging trends in the semiconductor industry;
- reviewing stakeholders' feedback relating to sustainability;
- monitoring the sustainability performance of the Company;
- monitoring sustainability matters;
- monitoring and advising on the Company's sustainability strategy, targets, goals, and overall sustainability performance; and
- monitoring that the sustainability strategy is aligned with the corporate strategy of the Company and vice versa.

The Supervisory Board has an audit committee (the "Audit Committee"), which assists the Supervisory Board in fulfilling its oversight responsibilities relating to corporate accounting, reporting practices, and the quality and integrity of our financial and non-financial reports of ST.

The responsibilities of the Audit Committee in relation to non-financial reporting, detailed in its charter available on st.com include, but are not limited to:

- monitoring the non-financial reporting process;
- monitoring the effectiveness of the Company's internal control and risk management systems in relation to the Company's non-financial reporting; and
- reviewing annual and interim financial statements and other non-financial information.

Composition of the administrative and management bodies and their responsibilities

Managing Board, Executive Committee, Senior Management and Corporate Affairs Committee

Our Managing Board consists of two male members, our President & Chief Executive Officer and our President & Chief Financial Officer, who are entrusted with the general management of our Company, including setting and implementing our sustainability strategy.

Our President & Chief Executive Officer chairs our Executive Committee, consisting of 8 members, of whom 12% are female and 88% are male. Our Executive Committee acts under the authority and responsibility of the Managing Board and in this respect manages our Company together with the Managing Board.

Further information on the composition of our Managing Board and our Executive Committee as well as their experience can be found in Section 5.4 (*Corporate Governance - Managing Board*). Further details on the gender balance in our Managing Board and Executive Committee can be found in Section 5.5 (*Corporate Governance - Dutch Gender Balance Act*).

Our Senior Management consists of the members of our Managing Board, the members of our Executive Committee and our Executive Vice Presidents, and consists of 31 members, of which 10% are female and 90% are male. Further information on the composition of our Senior Management as well as their experience can be found in Section 5.4 (*Corporate Governance - Managing Board*). Further details on the gender balance in our Senior Management can be found in Section 5.5 (*Corporate Governance - Dutch Gender Balance Act*).

In 2023 a sub-committee of the Executive Committee was established: the Corporate Affairs Committee (the "Corporate Affairs Committee"). As per its charter, this committee's primary purpose is to advise and support the Managing Board and Executive Committee in relation to their respective responsibilities regarding, amongst others, (i) defining and aligning corporate communications related to ST's corporate social responsibility, ESG and compliance & ethics initiatives and activities, as well as, (ii) assessing and recommending processes and policies related to such initiatives and activities.

Governance process to monitor, manage and oversee sustainability matters

While we have an existing governance process regarding sustainability topics in general, we are currently reassessing, adjusting and formalizing our governance processes to monitor, manage and oversee our material sustainability matters and specific related material IROs assessed in the 2024 DMA. We will report on the progress in formulating these processes in the coming years.

Our Managing Board is responsible for formulating and directing our sustainability strategy and sustainability long-term targets, and the Supervisory Board is responsible for overseeing these activities.

On a quarterly basis, the Sustainability Committee, as well as the Managing Board, the Executive Committee and the Senior Management, are generally updated on sustainability topics and ST's sustainability performance and targets, by our President Human Resources and Corporate Social Responsibility ("CHRO"), Corporate Sustainability Group Vice President ("Group VP Sustainability") and relevant sustainability experts, as the case may be.

The Corporate Affairs Committee regularly informs the Managing Board and Executive Committee and updates them on relevant sustainability topics.

In 2024, we created a dedicated project board, the Integrated Reporting Program Board, consisting of our President and Chief Financial Officer, our President and Legal Counsel, our CHRO and our President Quality, Manufacturing and Technology, with an advisory seat for our Executive Vice President, Chief Audit and Risk Executive, to manage and oversee the preparation of our sustainability reporting. This dedicated Integrated Reporting Program Board advised the Managing Board and Executive Committee

on the process towards our sustainability reporting under the CSRD, on a regular basis during the reporting year.

While the ERM framework is covering the management and oversight of sustainability-related risks, we are evaluating how to expand it to further embed sustainability-related impacts and opportunities.

Sustainability target setting

Annual targets and long-term targets are set by the Executive Committee and are supervised by the Sustainability Committee and their performance is reviewed each quarter.

Our corporate sustainability department ("Corporate Sustainability") is responsible for coordinating the sustainability target setting process. Sustainability-related targets are set based on the outcomes of the DMA. Although there was no direct engagement with specific stakeholders in the target setting process, the interests and views of our (external) key stakeholders are included in the DMA as described in Section 3.4.2.3.B (*Strategy - Interests and views of stakeholders*), and in that regard are taken into consideration by ST when setting its sustainability-related targets, as the targets were set based on the material IROs as assessed in the DMA.

For each sustainability matter identified as material in the DMA, a person who is skilled and knowledgeable on the relevant sustainability matter is identified and engaged to define the sustainability-related targets ("Goal Owners"). The Goal Owners propose sustainability-related targets which respond to the respective material IROs, in collaboration with all relevant internal stakeholders (i.e. relevant ST departments whose perimeter is covered by the scope of the target). The Executive Committee reviews and approves the sustainability-related targets and presents them to the Sustainability Committee. Sustainability-related targets may change from time to time in accordance with the outcomes of each DMA. Any amendments to the targets follow the same process as the target setting, including review and approval by the Executive Committee.

Corporate Sustainability is in charge of monitoring the targets. The Group VP Sustainability is responsible for the definition of the key performance indicators (each a "KPI" and together, the "KPIs"), monitoring and quarterly reporting to management.

We reviewed and updated our sustainability-related targets based on the outcome of the 2024 DMA. We disclose any changes made in the reporting year to previously set targets regarding a material sustainability matter in the relevant target disclosure section, relating to that specific sustainability matter. We review our targets on a regular basis and update where needed to reflect our sustainability strategy and to manage our material IROs effectively. This includes material sustainability matters for which we currently have not yet set targets. For a full overview of ST's current sustainability-related long-term targets please refer to Appendix 11.9.

Sustainability expertise

Corporate Sustainability, as well as site sustainability teams and other local teams, include people with a sustainability focus and relevant sustainability knowledge and who have a background in various social, environmental and safety topics, including climate change, pollution, water, waste, work-related rights such as working conditions and human rights regarding own workforce and supply chain workers and rights of affected communities. Our dedicated Compliance, Ethics and Privacy Department, consists of people with relevant knowledge on business conduct matters, namely whistleblowers' protection, corruption and bribery, and we have people within our internal Legal Department and Corporate External Reporting Department dedicated to non-financial reporting.

Addressing sustainability matters during 2024_

In 2024, our CHRO and the Group VP Sustainability attended the quarterly Sustainability Committee meetings, together with relevant sustainability experts. Topics discussed included: customer and investors sustainability requirements, environment, value chain and social aspects.

Furthermore, during 2024 the DMA results were communicated to and approved by the Executive Committee and were thereafter presented to the Audit Committee who acknowledged the results. The material IROs identified in the 2024 DMA, are addressed by specific programs or regular dedicated activities, and the Executive Committee and Supervisory Board are updated on the progress of such programs and dedicated activities.

The priority risks managed under our ERM Framework, including sustainability-related risks are addressed on an annual basis by the Managing Board, Executive Committee, Senior Management and Supervisory Board. These risks are considered in our strategy and are monitored and managed in accordance with our ERM Framework.

When overseeing our strategy in 2024 our management and Supervisory Board considered sustainability topics in general and more specifically certain IROs in specific cases or projects, such as IROs related to climate change, energy, pollution, labor rights of own workforce, water and affected communities, health and safety own workforce.

3.4.2.2.B. Integration of sustainability-related performance in incentive schemes (ESRS 2 GOV-3)

The remuneration policy of our Supervisory Board does not include sustainability-related performance.

The remuneration policy of our Managing Board, Executive Committee and Senior Management includes sustainability-related performance. More specifically, we have factored in climate-related considerations into their remuneration. The short-term incentive and long-term incentive program included a KPI for environment/climate (kCO2eq), aligned with our previous long-term sustainability targets. For more information on the performance against the environmental/climate KPI, we refer to Sections 4.9.3.2 (*Senior Management remuneration structure – Short-term 2024 incentive*), Section 4.9.3.2 (*Senior Management remuneration structure – Long-term incentive*) and 7.6.20.4 (*Notes to the Consolidated Financial Statements - Equity*).

For the disclosure required under ESRS 2 GOV-3 paragraphs 27 and 29, on how sustainability-related performance is included in incentive schemes of our Managing Board, Executive Committee and Senior Management, reference is made to the disclosure included in the remuneration report:

- Section 4.9.2.3. (*Managing Board remuneration structure – Performance criteria short-term incentive*) regarding the inclusion of sustainability-related performance in the short-term incentive of our Managing Board and Section 4.9.2.3. (*Managing Board remuneration structure – Long term incentive grant in 2024*) regarding the inclusion of sustainability-related performance in the 2024 long-term incentive of our Managing Board;
- Section 4.9.3.2. (*Senior Management remuneration structure – Short-term 2024 incentive*) regarding the inclusion of sustainability-related performance in the short-term incentive of our Senior Management (including our Executive Committee) and Section 4.9.3.2. (*Senior Management remuneration structure – Long-term incentive*) regarding the inclusion of sustainability-related performance in the long-term incentive of our Senior Management (including our Executive Committee).

3.4.2.2.C. Statement on due diligence (ESRS 2 GOV-4)

In line with our Code of Conduct, we have embedded responsible business conduct into our governance, strategy and business model. Our principles of responsible business conduct are informed by internationally recognized standards.

ST recognizes that conducting due diligence is an important element in managing our impacts on people and the environment. Due diligence allows us to identify, prevent, mitigate and address impact on people and the environment connected to our business. Our due diligence processes are based on, *inter alia*, the international instruments of the UN Guiding Principles on Business and Human Rights and the OECD Guidelines for Multinational Enterprises. Due diligence is an ongoing process, and we routinely evaluate our practices and policies and update those as appropriate. For more information on the application of the main aspects and steps of our due diligence process reflected in this sustainability statement, we refer to the sections in the table below.

Core Elements of Due Diligence	ESRS 2	E1	E2	E3	E5	S1	S2	S3	G1
a) Embedding due diligence in governance, strategy and business model	3.4.2.2.A. (GOV-2) 3.4.2.2.B. (GOV-3) 3.4.2.3.C. (SBM-3)	3.4.2.2.B. (GOV-3) 3.4.3.1.A. (SBM-3)				3.4.4.1.B. (SBM-3)	3.4.4.2.B. (SBM-3)	3.4.4.3.B. (SBM-3)	
b) Engaging with affected stakeholders in all key steps of the due diligence	3.4.2.2.A. (GOV-2) 3.4.2.3.B. (SBM-2) 3.4.2.4.A. (IRO-1)	3.4.3.1.A. (IRO-1) 3.4.3.1.B.	3.4.3.2.A. (IRO-1) 3.4.3.2.B.	3.4.3.3.A. (IRO-1) 3.4.3.3.B.	3.4.3.4.A. (IRO-1) 3.4.3.4.B.	3.4.4.1.A. (SBM-2) 3.4.4.1.C. 3.4.4.1.D.	3.4.4.2.A. (SBM-2) 3.4.4.2.C. 3.4.4.2.D.	3.4.4.3.A. (SBM-2) 3.4.4.3.C. 3.4.4.3.D.	3.4.5.2. (IRO-1) 3.4.5.3.A.
c) Identifying and assessing adverse impacts	3.4.2.4. A. (IRO-1) 3.4.2.3.C. (SBM-3)	3.4.3.1.A. (IRO-1; SBM-3)	3.4.3.2.A. (IRO-1)	3.4.3.3.A. (IRO-1)	3.4.3.4.A. (IRO-1)	3.4.4.1.B. (SBM-3) 3.4.4.1.C.	3.4.4.2.B. (SBM-3) 3.4.4.2.E.	3.4.4.3.B. 3.4.4.3.E.	3.4.5.2. (IRO-1)

d) Taking actions to address those adverse impacts		3.4.3.1.C. 3.4.3.1.A	3.4.3.2.C.	3.4.3.3.C.	3.4.3.4.C.	3.4.4.1.F.	3.4.4.2.F.	3.4.4.3.F.	
e) Tracking the effectiveness of these efforts and communicating		3.4.3.1.C. 3.4.3.1.D.	3.4.3.2.D.	3.4.3.3.D.	3.4.3.4.D.	3.4.4.1.G.	3.4.4.2.G.	3.4.4.3.G.	3.4.5.3.C.

3.4.2.2.D. Risk management and internal controls over sustainability reporting (ESRS 2 GOV-5)

The financial risk management and internal control processes which are currently in place will be applied to the sustainability reporting process in the coming years.

3.4.2.3 Strategy (ESRS 2 SBM)

3.4.2.3.A. Strategy, business model and value chain (SBM-1)

Strategy relating to or affecting sustainability matters

Our strategy focuses on sustainable long-term value creation for the Company and its affiliated enterprises and takes into account the evolution of the markets we serve and the environment and opportunities we see. Our strategy stems from the following key long-term trends in electronic systems which drive the evolving requirements of our customers and our solutions across the four end markets we address (Automotive; Industrial; Personal Electronics; and Communications Equipment, Computers and Peripherals):

- smart mobility – we provide innovative solutions to help car manufacturers make driving safer, more energy efficient and more connected;
- power and energy - our technology and solutions for power and energy management enable customers to increase energy efficiency everywhere and support the use of renewable energy sources;
- cloud-connected autonomous things – support the proliferation of secure, connected, autonomous devices enabled by edge AI.

Our value proposition for our various stakeholders is:

- For our shareholders – returning value in line with our objectives, by working towards sustainable and profitable growth;
- For our customers – providing differentiating enablers, using an independent, reliable and secure supply chain;
- For all stakeholders – committed to sustainability and upholding our values of integrity, prioritizing people and excellence.

We are an IDM. We design, manufacture, and sell semiconductor devices. We handle most manufacturing in-house. Being an IDM allows us to tightly integrate our technology and product development with our manufacturing operations while providing our customers the capacity, flexibility, and quality they need. Most of our employees are based in Europe, specifically in Italy and France, as detailed in the table titled 'Overview by Country' included in Section 3.4.4.1.G.2. (*Metrics - Characteristics of the undertaking's employees*).

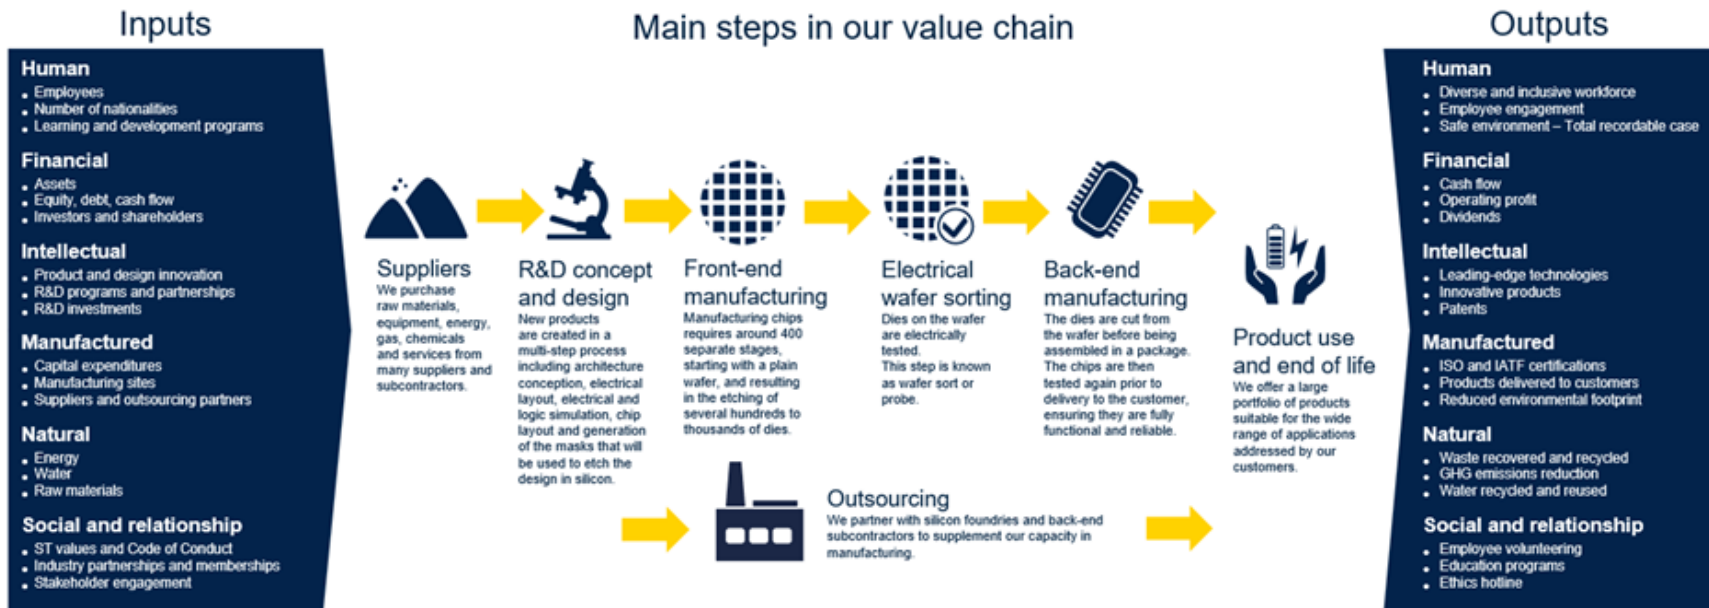

Our strong focus, as a broad range player, is on high-growth applications such as, (i) in Automotive, electrified power train, ADAS, legacy systems; (ii) in Industrial, with energy management at large, battery-operated tools, automation and robotics; as well as, more selectively, (iii) on premium personal electronics devices, data center power management and connectivity, and low-earth-orbit satellite communications.

Further details of our products and product groups can be found in Section 2.3. (*Corporate overview - Product information*) above.

One of the main challenges we foresee in the coming years in relation to our sustainability matters is increased, dynamic and rapidly evolving sustainability regulatory requirements, on matters such as reduction of water consumption and use of hazardous substances. This could create challenges in terms of resources, operations and our manufacturing processes. We have set up specific projects to address these challenges and we are constantly monitoring developments in this regard and how to effectively respond hereto.

Our business model and value chain

Our business model and value chain are presented in the below graph.

Our value chain is a comprehensive process that involves multiple stages, each contributing to the creation of high-quality semiconductor devices. Our three broad value chain sections are described as follows:

- Upstream value chain:
 - suppliers - ST purchases raw materials, equipment, energy, gas, chemicals, and services from many suppliers.
 - subcontractors - ST utilizes external silicon foundries and OSATs (together "subcontractors") to supplement its capacity in front-end manufacturing, electrical wafer sorting, and back-end manufacturing. These subcontractors help manage demand and expand production capabilities.
- ST own operations: ST is an IDM that designs, develops, manufactures, and markets a broad range of products used in a wide variety of applications for the four end-markets it addresses. ST's in-house operations include:
 - R&D concept and design: New products are created in a multi-step process including architecture conception, electrical layout, electrical and logic simulation, chip layout, and generation of the masks that will be used to etch the design in silicon.
 - front-end manufacturing: Manufacturing chips requires around 400 separate stages, starting with a plain wafer and resulting in the etching of several hundreds to thousands of dies.
 - electrical wafer sorting: Dies on the wafer are electrically tested to check that they meet the required specifications. This step is known as wafer sort or probe.
 - back-end manufacturing: The dies are cut from the wafer before being assembled in a package. The chips are then tested again prior to delivery to the customer, ensuring they are functional and reliable.
- Downstream value chain (distributors and customers):
 - product use and end of life (downstream value chain - distributors and customers). We offer a large portfolio of products suitable for the wide range of applications addressed by our customers. This stage includes distributing products to customers and ensuring that products meet the needs of various applications.

3.4.2.3.B. Interests and views of stakeholders (SBM-2)

Our diverse range of stakeholders can affect or be affected by our activities and products in different manners. Our key stakeholders are: employees, customers, suppliers, including supply chain workers, subcontractors, including their workers, investors and affected communities. Regular engagement with internal and external stakeholders is essential to assess their expectations.

We aim to maintain open communication and actively listen, to be able to integrate their feedback into our decision-making, as appropriate. We seek to integrate the interests and views of our stakeholders into our strategy and business model as they are taken into account when defining our sustainability strategy, ambitions, policies, programs and targets. Every year, we aim to review our sustainability materiality based on, amongst others, stakeholder feedback and external trends to anticipate changes and include stakeholder expectations in our considerations. As of 2024 this annual materiality assessment is conducted on a double materiality basis in accordance with the ESRS. The Sustainability Committee is responsible for reviewing stakeholders' feedback related to sustainability and through the DMA governance process, the Executive Committee, Audit Committee and Supervisory Board are informed of the results of the stakeholder consultation.

In 2024, for the DMA, we consulted our stakeholders to:

- identify the sources of their interests and concerns;
- collect additional perspectives and support the identification and assessment of IROs; and
- check the completeness of the identified material sustainability matters.

The answers provided by our stakeholders were reviewed and analyzed and were considered in the DMA through which we identified the Company's material sustainability matters.

For further details on the 2024 DMA reference is made to Section 3.4.2.4.A (*Impact, risk and opportunity management*).

Our engagement with our stakeholders varies across our sites and all levels of the Company. Sites conduct specific actions depending on their activity, size, location and local culture. ST sites have regular exchanges with local stakeholders. At corporate level, we conduct surveys as part of the double materiality exercise. It involves all categories of stakeholders and covers pre-identified sustainability topics. Specifically with regard to our employees, we also conduct a bi-annual general employee engagement survey, and a bi-annual employee survey on specific topics, gathering and responding to their feedback and inputs.

The table below lists certain main topics of interests identified through materiality surveys and examples of various types of engagement per category of stakeholder group:

ST stakeholder group	Topics of interest	How we gather feedback
Employees	Own workforce: health and safety Own workforce: working conditions and other work-related rights Whistleblowing, corruption and bribery Pollution and chemicals Water	Employee surveys and workshops training Intranet with global and local content
Customers	Own workforce: working conditions and other work-related rights Climate change: energy Pollution and chemicals Own workforce: health and safety Water	Trade shows and technology days seminars, conferences, workshops site visits, meetings, audit
Investors, analysts, shareholders	Water Waste and circular economy Pollution and chemicals Climate change mitigation Workers in the supply chain: working conditions and other work-related rights Own workforce: equal treatment and opportunities for all	Capital market days regulatory filings and reports ESG questionnaires and meetings
Suppliers	Own workforce: working conditions and other work-related rights Own workforce: health and safety Waste and circular economy Whistleblowing, corruption and bribery Workers in the supply chain: working conditions and other work-related rights	Adherence to ST business ethics and responsible business conduct and compliance with RBA code of conduct, training, audits and interviews, supplier events
Media	Own workforce: working conditions and other work-related rights Climate change: energy, climate change mitigation, climate change adaptation Workers in the supply chain: working conditions and other work-related rights Waste and circular economy	Press releases and interviews conferences and conventions social networks, website

Affected communities and non-profit organizations*	Own workforce: health and safety Climate change adaptation Workers in the supply chain: working conditions and other work-related rights Pollution and chemicals Own workforce: working conditions and other related rights	Local partnerships conferences, conventions, making donations, training, volunteering, local initiatives
Industry associations	Business conduct: political engagement and industry associations Water Waste and circular economy Workers in the supply chain: working conditions and other work-related rights Climate change: energy	Public-private partnerships activities Participation in industry consortiums and working groups meetings, conferences, seminars
Schools, research and academic institutions	Water Own workforce: working conditions and other work-related rights Waste and circular economy Workers in the supply chain: working conditions and other work-related rights Own workforce: health and safety	Internships, scholarships, PhDs joint R&D projects, joint labs conferences, technical seminars
National and local authorities*	Own workforce: equal treatment and opportunities for all Own workforce: working conditions and other work-related rights Own workforce: health and safety Pollution and chemicals Climate change: energy	Partnerships with municipalities correspondence and visits annual report

*So-called “silent stakeholders” managed through NGOs, communities, authorities

While we have various engagements with our stakeholders, we routinely seek for ways to improve our processes. Standardizing stakeholder engagement throughout the Company and deploying a more structured and effective stakeholder method, specifically regarding sustainability topics, is one of the ways we have identified to enhance our stakeholder engagement process. Therefore, at the end of 2024, we developed a structured stakeholder engagement approach, which is currently being deployed across relevant ST departments and sites. The main principles of this enhanced structured stakeholder engagement are described in the Stakeholder Engagement Policy available on st.com.

3.4.2.3.C. Material impacts, risks and opportunities and their interaction with strategy and business model (SBM-3)

The risks included in the IRO tables in Section 3.4.2.4 (*Impact, risk and opportunity management*) concern risks regarding environmental, social and governance sustainability matters that we identified to be material through our 2024 DMA.

The sustainability-related IROs we identified and assessed as material through the 2024 DMA are listed and described in more detail in Section 3.4.2.4 (*Impact, risk and opportunity management*).

Current and anticipated effects of material IROs on our business model, value chain, strategy and decision-making are detailed in the description of each IRO (see Section 3.4.2.4 (*Impact, risk and opportunity management*)). The IRO description also details how material impacts affect people or the environment. Our response to these effects is embedded in our long-term sustainability targets and associated programs and related key actions detailed in this sustainability statement.

Our strategy and business model currently address material impacts and risks, and allow the Company to take advantage of material opportunities. The connection between identified impacts, risks and opportunities, and our business model and strategy is made through our sustainability target setting process. The resilience of our strategy and business model regarding our capacity to address material impacts and risks and to take advantage of material opportunities will be regularly assessed by monitoring

targets (in so far such targets have been set) and associated programs or related key actions. This assessment is conducted through the tracking of the Company's progress towards reaching its targets on a regular basis, at least annually. Furthermore, this assessment is also conducted by annually performing an evaluation of the targets against the outcomes of the annual DMA, so that identified material IROs are effectively responded to via existing targets, programs and actions, whereby the relevant time horizons as applied in the DMA for the material IROs are taken into account. Based on these assessments, the Company updates targets and associated programs as appropriate to support the resilience of our strategy and business model.

In 2024, based on the DMA, the Company has not identified any actual material risks or opportunities. Therefore, there are no related current financial effects to be reported.

3.4.2.4 Impact, risk and opportunity management

3.4.2.4.A. Description of the process to identify and assess material impacts, risks and opportunities (IRO-1)

Introduction

As a fundamental element of our preparation for the CSRD reporting, we have performed a DMA pursuant to the ESRS.

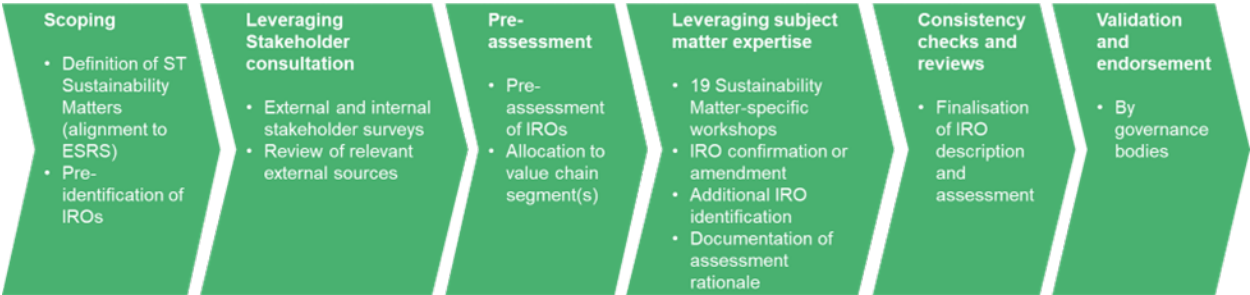

At ST, ERM is designed and implemented in a way that enables the Company to set and execute its strategy. We recognize the need to support coherence between the assessment and management of different types of risks, including the sustainability-related ones. Therefore, we have adopted the ERM process in the DMA and leveraged our ERM methodology, which has been further developed and adjusted as necessary to accommodate ESRS specificities. Material risks identified in the DMA are embedded in the overall Company risk map. Based on our ERM methodology, risks are prioritized based on the combination of criticality and possible improvement to be implemented. In the coming years, ST will assess how to more explicitly embed material impacts and opportunities as identified through the DMA in the ERM framework.

DMA Governance

The DMA process and results were overseen by a dedicated, cross-functional, integrated reporting program board. The DMA results and conclusions were communicated to and approved by the Executive Committee. The DMA results were ultimately presented to the Audit Committee of the Supervisory Board who acknowledged the results.

DMA Process

The 2024 DMA process consisted of the following steps:

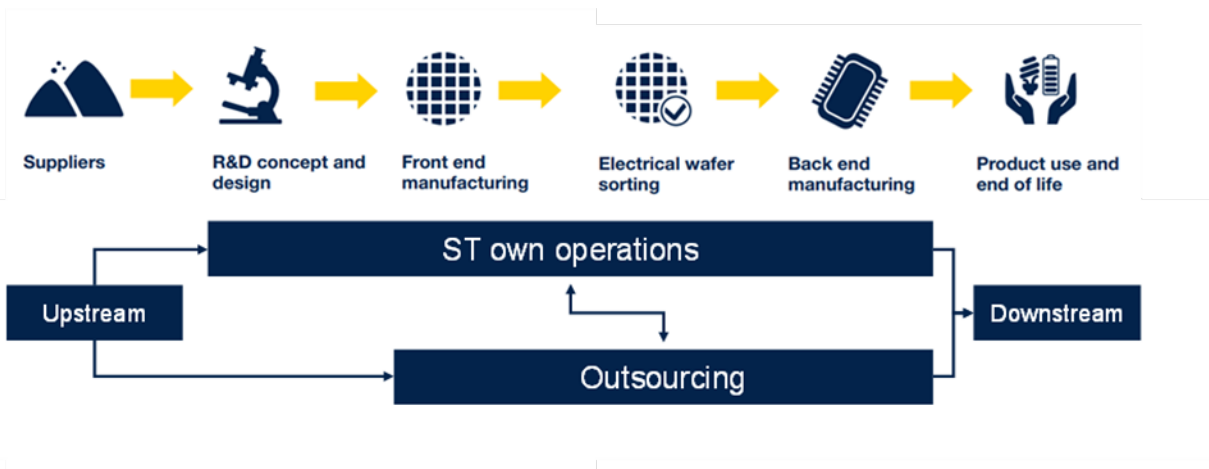

DMA Scope

Based on our business model and taking into account the sustainability topics covered by the ESRS, we identified the following nineteen sustainability matters as relevant for ST:

ESRS	Topics	ST Sustainability Matters
E1	Climate change	Climate change adaptation
		Climate change mitigation
		Energy
E2	Pollution	Pollution and chemicals
E3	Water and marine resources	Water
E4	Biodiversity and ecosystems	Biodiversity
E5	Circular economy	Waste and circular economy
S1	Own workforce	Own workforce: Working conditions and other related rights
		Own workforce: Health and safety
		Own workforce: Equal treatment and opportunities for all
S2	Workers in the value chain	Workers in the value chain: Working conditions and other related rights
		Workers in the value chain: Health and safety
		Workers in the value chain: Equal treatment and opportunities for all
S3	Affected communities	Affected communities
S4	Consumers and end-users	Consumers and end-users
G1	Business conduct	Whistle-blowing
		Supplier relationship management
		Political engagement and industrial association
		Corruption and bribery

The nineteen sustainability matters relevant to ST formed the basis for the identification of our impacts on people and the environment, as well as the risks and opportunities to ST as a company. To conduct a comprehensive DMA, the sub-topics and sub-sub-topics as referenced in the ESRS, were systematically considered in light of our specific business model and strategy and our value chain. IROs were identified considering various relevant dimensions including different activities, business relationships and geographies. Moreover, when relevant, interdependencies were identified and documented (e.g., when an impact might be the cause of a risk or an opportunity). Dependencies on the availability of natural and social resources were also identified and documented for each IRO.

Our value chain is summarized in the below chart, while a detailed overview of our value chain is included in Section 3.4.2.3.A. (*Strategy, business model and value chain*) above.

Leveraging stakeholder consultation

Further to the general description on ST's stakeholder engagement (Section 3.4.2.3.B. (*Strategy - Interests and views of stakeholders*)), this section refers to the specific role of stakeholder engagement as part of the DMA. ST engages with stakeholders to identify the sustainability matters that are most significant to them.

The main objectives of the stakeholder consultation were the following:

- Collect additional perspectives to support the identification and assessment of material impacts, risks and opportunities.
- Ease the identification of stakeholder's sources of interest and concerns.

Moreover, the stakeholder consultation helped to support the completeness of the identified relevant sustainability matters.

The stakeholder consultation was conducted leveraging a variety of channels:

- A selection of external stakeholders (customers, industry associations, investors, analysts and shareholders, national and local authorities, non-profit organizations, schools, research and academic institutions, as well as suppliers) were directly consulted through a dedicated survey.
- Internal stakeholders (comprising of different categories of ST management and employees) were also directly consulted through a dedicated survey.
- Furthermore, ST leveraged a data analytics platform to conduct a research-based consultation collecting additional inputs from a wide range of media and complete the consultation.
- ST also leveraged inputs from non-profit organizations and media coverage to include silent stakeholders' views in the analysis. Silent stakeholders are stakeholders who may not actively voice their opinions (e.g. nature) but might nonetheless be impacted by our activities.

Both the survey-based and research-based consultations covered the ESRS topics.

In processing the outcome of the stakeholder consultation, each above-mentioned stakeholder groups received a weight based on its ability to influence ST decisions and representativeness of the responding group. The weights were applied to the views expressed by each stakeholder group on individual sustainability matters in order to produce an overall ranking by sustainability matter of stakeholder group perceptions.

Overall, the stakeholder consultation outcome was consistent with our internal materiality assessment. The topics evaluated at high score by our stakeholders were also assessed as material in the 2024 DMA, confirming alignment between their views and the internal materiality assessment. Additional topics were

identified as material by ST in the internal 2024 DMA, which were not identified as such by our stakeholders.

Pre-assessment

Based on our ESRS topical review, our knowledge of our value chain and our business and our understanding of stakeholder perceptions, we identified a first list of IROs clustered into our nineteen sustainability matters. Those IROs were pre-assessed by an internal cross-functional team.

Leveraging subject matter expertise

The IROs were discussed in a series of sustainability matter-specific workshops with ST subject matter experts from the relevant functions concerned. Prior to the workshops, onboarding sessions were held to obtain a common understanding of the CSRD, the objectives of the DMA as well as the associated process steps and methodology.

During those sustainability matter-specific workshops, the pre-identified scope and IROs, including pre-assessment, were discussed, updated as needed and new IROs were included as relevant.

Consistency checks and review

Following the sustainability matter-specific workshops, an internal management review and further consistency checks were performed, and the list of IROs and their respective assessments were finalized.

Validation

The 2024 DMA results and conclusions were communicated to and approved by the Executive Committee. The 2024 DMA results were ultimately presented to the Audit Committee of the Supervisory Board which acknowledged the results.

ERM-aligned DMA methodology

IRO assessments: general principles

The methodology for both the impact and financial materiality is consistent with our ERM practices. The identified actual (negative and positive) impacts on people and the environment were assessed based on magnitude of impact (four levels from low to very high). The identified potential (negative and positive) impacts on people and the environment, as well as the risks and opportunities for the Company were assessed based on the two following criteria:

- likelihood of occurrence: four levels from remote to almost certain
- magnitude of impact: four levels from low to very high magnitude

The combination of likelihood and magnitude provided four degrees of materiality, which were represented in a criticality matrix, with a color code ranging from white to dark blue. The IROs assessed in the dark blue area are deemed material for the purpose of the CSRD.

The below matrix is an illustration of such criticality matrix.

Methodological specificities

Both for impact and financial materiality, IROs were initially assessed on a residual basis (i.e. taking into account existing mitigating measures). Where relevant, insights from internal data and/or from our existing due diligence process with regard to the value chain (e.g. in the context of the RBA, as further described in Section 3.4.4.2.C (*Workers in the supply chain - Policies*) below) were leveraged in the assessment process.

Assessments were performed across different time horizons, ranging from short-term (within current reporting year) and mid-term (from one to five years) to long-term (beyond five years), with the exception of climate-related IROs for which the time scale was extended with long term defined as beyond ten years.

When IROs were not assessed as material on a residual basis across the three-time horizons, they were further assessed on an inherent basis (i.e. without taking into account any existing mitigating measure). Inherent assessments were performed on a long-term time horizon therefore considering the highest effect.

Regarding the impact materiality, the magnitude of (negative and positive) impacts on people and the environment was assessed using a combination of the following sub criteria:

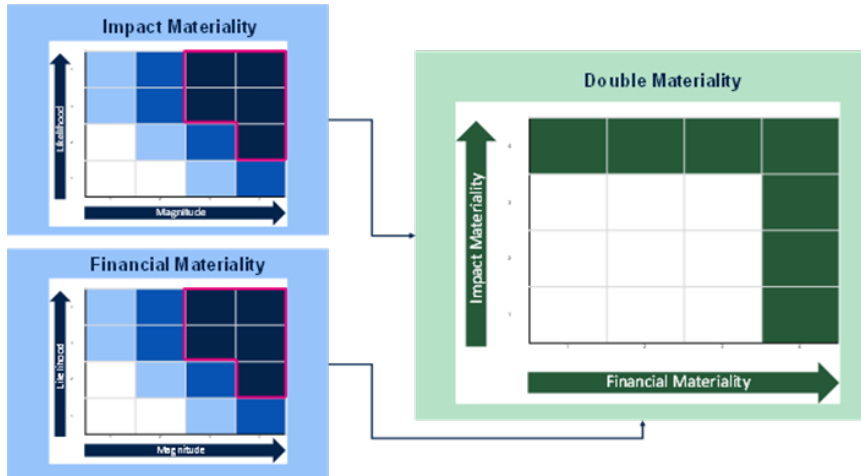

- scale (how great is the impact?)
- scope (how widespread?); and
- irremediable character (i.e. the extent to which the impact can be remediated) for negative impacts only.

Regarding the financial materiality, the magnitude of risk and opportunities was assessed based on qualitative considerations, and quantitative considerations when available. From a quantitative standpoint, the estimated financial magnitude of risk and opportunities towards ST was assessed based on their potential effects on net income. Overall, in 2024, we leveraged a 1-year phase-in regarding the estimation of potential financial impacts.

Finally, we have followed the ESRS-defined methodological exceptions, in particular in relation to potential negative human rights impacts.

Combining impact and financial materialities to obtain the double materiality

The impact and financial materialities were combined in the following manner:

Each relevant sustainability matter was positioned on the above impact or financial materiality matrices based on its highest-rated IRO. Ultimately, a sustainability matter has been considered to be material when at least one IRO was assessed to be material.

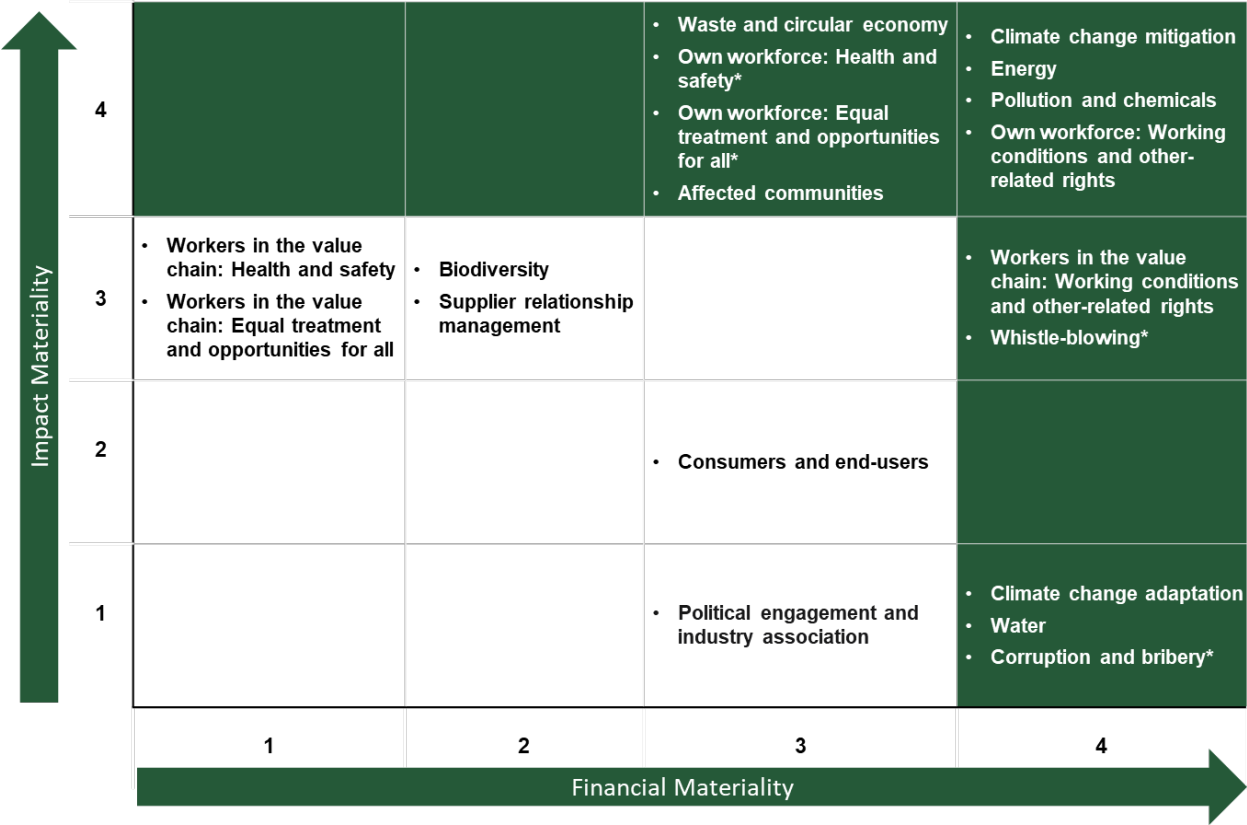

In the final double materiality matrix, any sustainability matter positioned in the dark green area is deemed material from a CSRD standpoint.

DMA Results

Out of the nineteen relevant sustainability matters, thirteen sustainability matters related to ESRS E1, E2, E3, E5, S1, S2, S3 and G1 were assessed as material as outlined in the following table and illustrated matrix.

The following sustainability matters were assessed as material on an inherent basis only: "Own workforce: Working conditions and other-related rights"; "Own workforce: Equal treatment and opportunities for all"; "Whistleblowing" and "Corruption and Bribery".

ESRS	Material ST Sustainability Matters	Basis for materiality assessment		
		Impact materiality	Financial materiality	Residual vs inherent
E1	Climate change mitigation	YES	YES	On a residual basis
E1	Climate change adaptation	NO	YES	On a residual basis
E1	Energy	YES	YES	On a residual basis
E2	Pollution and chemicals	YES	YES	On a residual basis
E3	Water	NO	YES	On a residual basis
E5	Waste and circular economy	YES	NO	On a residual basis
S1	Own workforce: Working conditions and other-related rights	YES	YES	On a residual basis
S1	Own workforce: Health and safety	YES	NO	On an inherent basis
S1	Own workforce : Equal treatment and opportunities for all	YES	NO	On an inherent basis
S2	Workers in the value chain: Working conditions and other-related rights	YES	YES	On a residual basis
S3	Affected communities	YES	NO	On a residual basis
G1	Whistle-blowing	NO	YES	On an inherent basis
G1	Corruption and bribery	NO	YES	On an inherent basis

* = Sustainability Matters material on an inherent basis only

The following tables list the IROs we have identified and assessed as material in our 2024 DMA, including programs or dedicated actions and (entity-specific) targets, we have in place to address such IROs.

E1 – Climate change mitigation							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ⁽¹⁾ or inherent ⁽²⁾ basis	ST response	Targets
Negative impact on the environment, due to GHG emissions linked to our activities, contributing to climate change	Negative impact	Actual	Own operations	Short term	Residual basis	ST's carbon neutrality program	We aim to achieve a 20% overall reduction in absolute scope 1 and 2 emissions by 2030 vs 2024.
Negative impact on the environment, due to GHG emissions linked to suppliers' activities, contributing to climate change	Negative impact	Actual	Upstream	Short term	Residual basis	ST's carbon neutrality program	We aim to abate at least 90% of our climate adverse process gases ("CAPG") emissions by 2030 (entity-specific).
Negative impact on the environment, due to GHG emissions linked to subcontractors' activities, contributing to climate change	Negative impact	Actual	Upstream	Short term	Residual basis	ST's carbon neutrality program	We aim to achieve a 10% reduction in our Scope 3 upstream GHG emissions by 2030, and a 20% reduction by 2035, vs 2024.
Negative impact on the environment, due to GHG emissions linked to distributors and customers activities, contributing to climate change	Negative impact	Actual	Downstream	Short term	Residual basis	ST's third-party management (actions)	No target in place

E1 – Climate change mitigation							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ⁽¹⁾ or inherent ⁽²⁾ basis	ST response	Targets
Risk of not delivering on carbon neutrality roadmap commitments (Poor GHG emissions performance) leading to reduced stakeholders' engagement (customers, investors and talents), company reputation and increased need for offsetting	Transition Risk	Potential	Own operations	Long term	Inherent basis	ST's carbon neutrality program	We aim to achieve a 20% overall reduction in absolute scope 1 and 2 emissions by 2030 vs 2024. We aim to abate at least 90% of our climate adverse process gases ("CAPG") emissions by 2030 (entity-specific). We aim to achieve a 10% reduction in our Scope 3 upstream GHG emissions by 2030, and a 20% reduction by 2035, vs 2024.
Risk of not being able to influence suppliers to deliver on their carbon neutrality roadmap commitments affecting ST's scope 3 performance	Transition Risk	Potential	Upstream	Long term	Inherent basis	ST's carbon neutrality program	
Risk of not being able to influence subcontractors to deliver on their carbon neutrality roadmap commitments affecting ST's scope 3 performance	Transition Risk	Potential	Upstream	Long term	Inherent basis	ST's carbon STRike program (procurement)	
Risk of not being able to influence distributors and customers to deliver on their carbon neutrality roadmap commitments affecting ST's scope 3 performance	Transition Risk	Potential	Downstream	Long term	Inherent basis	ST's third-party management (actions)	No target in place

(1) "Residual" refers to the materiality assessment that takes into account existing mitigation measures.

(2) "Inherent" refers to the materiality assessment without taking into account any existing mitigation measures.

E1 – Climate change adaptation							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ⁽¹⁾ or inherent ⁽²⁾ basis	ST response	Targets
Risk of natural catastrophe due to chronic and/or acute climate-related events damaging ST's assets, disrupting operations and causing business interruption	Physical Risk	Potential	Own operations	Long term	Residual basis	ST's climate adaptation program	No target in place
Risk of natural catastrophe due to chronic and/or acute climate-related events damaging suppliers' assets, disrupting operations and causing business interruption	Physical Risk	Potential	Upstream	Long term	Residual basis	ST's responsible supply chain program	No target in place
Risk of natural catastrophe due to chronic and/or acute climate-related events damaging subcontractors' assets, disrupting operations and causing business interruption	Physical Risk	Potential	Upstream	Long term	Residual basis	ST's climate adaptation program	No target in place
Risk of natural catastrophe due to chronic and/or acute climate-related events damaging distributors and customers assets, disrupting operations and causing business interruption	Physical Risk	Potential	Downstream	Long term	Residual basis	ST's third-party management (actions)	No target in place

(1) "Residual" refers to the materiality assessment that takes into account existing mitigation measures.

(2) "Inherent" refers to the materiality assessment without taking into account any existing mitigation measures.

E1 – Energy							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ⁽¹⁾ or inherent ⁽²⁾ basis	ST response	Targets
Negative impact on other users from absolute level of energy consumption due to Company scale resulting in significant relative weight of ST electricity consumption in electricity grid	Negative impact	Actual	Own operations	Short term	Residual basis	ST's carbon neutrality program	We aim to adopt 100% renewable electricity by 2027 through energy procurement and renewable energy installations and maintain this percentage each year thereafter.
Negative impact on other users from absolute level of energy consumption of suppliers resulting in significant relative weight of electricity consumption in electricity grid	Negative impact	Actual	Upstream	Mid term	Residual basis	ST's carbon neutrality program	We aim to annually save energy, achieving cumulative energy savings of 100 GWh by 2035, versus the baseline year 2024 (entity-specific).
Negative impact on other users from absolute level of energy consumption of subcontractors resulting in significant relative weight of electricity consumption in electricity grid	Negative impact	Actual	Upstream	Short term	Residual basis	ST's carbon neutrality program	No target in place
Risk of increased power outages for ST due to climate change-induced conditions / events, or due to decision from public authorities (imposing planned or unplanned power outages or rationing), leading to business disruption or interruption	Transition Risk	Potential	Own operations	Long term	Residual basis	ST's carbon neutrality program	We aim to adopt 100% renewable electricity by 2027 through energy procurement and renewable energy installations and maintain this percentage each year thereafter. We aim to annually save energy, achieving cumulative energy savings of 100 GWh by 2035, versus the baseline year 2024 (entity-specific).

E1 – Energy							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ⁽¹⁾ or inherent ⁽²⁾ basis	ST response	Targets
Risk of increased power outages for suppliers due to climate change-induced conditions / events, or due to decision from public authorities (imposing planned or unplanned power outages or rationing), leading to business disruption or interruption	Transition Risk	Potential	Upstream	Long term	Residual basis	ST's carbon STRike program	No target in place
Risk of increased power outages for subcontractors due to climate change-induced conditions / events, or due to decision from public authorities (imposing planned or unplanned power outages or rationing), leading to business disruption or interruption	Transition Risk	Potential	Upstream	Long term	Residual basis	ST's carbon neutrality program	No target in place
Risk of increased energy costs due to climate-related factors, or products / services / raw materials cost increase indirectly (through the value chain) impacting the Company's operating margin	Transition Risk	Potential	Own operations	Mid term	Residual basis	ST's carbon neutrality program	We aim to adopt 100% renewable electricity by 2027 through energy procurement and renewable energy installations and maintain this percentage each year thereafter.
Opportunity to reduce energy consumption per unit produced (8" equivalent wafer out) leading to increased profitability; or benefit from the development of renewable energy sources through LTAs and PPAs, and enhance company reputation	Opportunity	Potential	Own operations	Long term	Residual basis	ST's carbon neutrality program	We aim to annually save energy, achieving cumulative energy savings of 100 GWh by 2035, versus the baseline year 2024 (entity-specific).

(1) "Residual" refers to the materiality assessment that takes into account existing mitigation measures.

(2) "Inherent" refers to the materiality assessment without taking into account any existing mitigation measures.

E2 – Pollution and chemicals							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ⁽¹⁾ or inherent ⁽²⁾ basis	ST response	Targets
Negative impact from ST on local natural ecosystems caused by existing and / or accidental pollution (e.g., hazardous chemicals and gases use and handling) of soil / air / water / living organisms and food resources	Negative impact	Actual	Own operations	Short term	Residual basis	ST's pollution program	We aim to further decrease Volatile Organic Compound (VOC) emissions from ST's manufacturing sites, to achieve an overall 70% absolute reduction by 2030 vs 2024.
Negative impact from the suppliers on local natural ecosystems caused by accidental pollution (e.g., hazardous chemicals and gases use and handling) of soil / air / water / living organisms and food resources	Negative impact	Potential	Upstream	Long term	Residual basis	ST's responsible supply chain program	No target in place

E2 – Pollution and chemicals							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ⁽¹⁾ or inherent ⁽²⁾ basis	ST response	Targets
Negative impact from subcontractors on local natural ecosystems caused by accidental pollution (e.g., hazardous chemicals and gases use and handling) of soil / air / water / living organisms and food resources	Negative impact	Potential	Upstream	Mid term	Residual basis	ST's responsible supply chain program	No target in place
Risk of not being able to substitute hazardous materials (substances of concern and very high concern) and heavy metals (e.g., lead) in processes and products, in line with increasing customers' requirements and / or enactment or reinforcement of regulations banning, restricting or reinforcing obligations on: - handling and storage of materials / gases (e.g. hydrogen) / chemicals (e.g. acids) - usage of materials / gases (e.g. PFCs) / chemicals (e.g. PFAS) in production processes and products - pollution mitigation measures (air, water, soil) regarding materials / gases (e.g. PFCs) / chemicals (e.g. PFAS) resulting in additional direct / indirect (through the value chain) costs and/or capacity reduction	Risk	Potential	Own operations	Long term	Residual basis	ST's chemical program	We aim, alongside our efforts to continuously assess substances of very high concern and substitution, to make all products manufactured at ST 98% halogen-free by 2035 (entity-specific).

(1) "Residual" refers to the materiality assessment that takes into account existing mitigation measures.

(2) "Inherent" refers to the materiality assessment without taking into account any existing mitigation measures.

E3 – Water							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ⁽¹⁾ or inherent ⁽²⁾ basis	ST response	Targets
Risk of increased water shortage for ST due to climate change-induced conditions / events, or due to decision from public authorities (imposing planned or unplanned restrictions or rationing) or restrictions on water discharge (e.g. temperature after treatment), leading to business disruption or interruption	Risk	Potential	Own operations	Mid term	Residual basis	ST's water program	We aim to have an annual water recycling rate of at least 60% by 2035 through implementing innovative programs (entity-specific). It is our aim to annually save water reaching 6 million cubic meters of water saved by 2035 vs 2024 (entity-specific).
Risk of increased water shortage for subcontractors due to climate change-induced conditions / events, or due to decision from public authorities (imposing planned or unplanned restrictions or rationing) or restrictions on water discharge (e.g. temperature after treatment), leading to business disruption or interruption	Risk	Potential	Downstream	Mid term	Residual basis	ST's responsible supply chain program	No target in place

(1) "Residual" refers to the materiality assessment that takes into account existing mitigation measures.

(2) "Inherent" refers to the materiality assessment without taking into account any existing mitigation measures.

E5 – Waste and circular economy							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ⁽¹⁾ or inherent ⁽²⁾ basis	ST response	Targets
Negative impact on the environment (landfill, waste treatment) resulting from generation of residual ST internal waste	Negative impact	Potential	Own operations	Mid term	Residual basis	ST's waste and circular program	We aim, each year, to reuse, recycle, and recover at least 95% of our waste, and to limit waste disposal to below 5%.
Negative impact on the environment (landfill, waste treatment) resulting from generation of residual suppliers' internal waste	Negative impact	Potential	Upstream	Mid term	Residual basis	ST's responsible supply chain program	No target in place
Negative impact on the environment (landfill, waste treatment) resulting from generation of residual subcontractors' internal waste	Negative impact	Potential	Upstream	Mid term	Residual basis	ST's responsible supply chain program	No target in place
Negative impact on the environment at the end of life of our products due to residual presence of harmful materials	Negative impact	Potential	Own operations	Long term	Inherent basis	ST's chemicals program	No target in place

(1) "Residual" refers to the materiality assessment that takes into account existing mitigation measures.

(2) "Inherent" refers to the materiality assessment without taking into account any existing mitigation measures.

S1 – Own workforce							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ⁽¹⁾ or inherent ⁽²⁾ basis	ST response	Targets
Negative impact on own workforce due to difficulties in securing labor rights (e.g., excessive working hours, adequate wages) and human rights (incl. all forms of forced / bonded labor, child labor, student workers, inadequate housing)	Negative impact	Potential	Own operations	Short term	Residual basis	ST's labor and human rights program	We aim to achieve RBA platinum recognition for all majority-owned main manufacturing sites by 2030 (entity-specific).

S1 – Own workforce							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ⁽¹⁾ or inherent ⁽²⁾ basis	ST response	Targets
Negative impact on own workforce due to leakage of sensitive personal information related to employees, either from ST or duly contracted third parties, leading to harmful consequences for individuals concerned (e.g., harassment, fraud, blackmail, identity theft, etc.	Negative impact	Potential	Own operations	Long term	Inherent basis	ST's data privacy program	No target in place
Risk of human rights violation (incl. all forms of forced / bonded labor, child labor and student workers consideration, inadequate housing) for our own workforce leading to allegation, litigation, fines or penalties as well as affecting ST social objectives, commitments and reputation	Risk	Potential	Own operations	Long term	Inherent basis	ST's labor and human rights program	We aim to achieve RBA platinum recognition for all majority-owned main manufacturing sites by 2030 (entity-specific).
Negative impact on our workforce due to occupational injuries, illnesses (e.g., related to hazardous chemicals or repetitive strain injuries), mental health issues, exhaustion, poor well-being in the workplace or other consequences	Negative impact	Potential	Own operations	Long term	Inherent basis	ST's safety firST program	We aim, each year, to achieve a Total Recordable Case Rate of 0.75 or less for work-related injuries and illnesses, including onsite value chain workers (entity-specific).
Negative impact on own workforce and their careers (unequal pay or chances of progression) due to discrimination, harassment in our workplace	Negative impact	Potential	Own operations	Long term	Inherent basis	ST's equal treatment program	We aim to maintain an adjusted gender pay gap below 5% at company level each year (entity-specific). We aim for the representation of women in management and Senior Management roles to be at least 25% by 2035 (entity-specific).

(1) "Residual" refers to the materiality assessment that takes into account existing mitigation measures.

(2) "Inherent" refers to the materiality assessment without taking into account any existing mitigation measures.

S2 – Workers in the supply chain							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ⁽¹⁾ or inherent ⁽²⁾ basis	ST response	Targets
Negative impact on suppliers' workers due to human rights violation (forced labor incl. bonded labor)	Negative impact	Potential	Upstream	Short term	Residual basis	ST's responsible supply chain program	Target setting in process
Negative impact on subcontractors' workers due to human rights violation (forced labor incl. bonded labor)	Negative impact	Potential	Upstream	Long term	Inherent basis	ST's responsible supply chain program	
Negative impact on supplier's workers due to human rights violation (child labor and young workers)	Negative impact	Potential	Upstream	Long term	Inherent basis	ST's responsible supply chain program	
Negative impact on subcontractors' workers due to human rights violation (child labor and young workers)	Negative impact	Potential	Upstream	Long term	Inherent basis	ST's responsible supply chain program	
Risk of human rights violation (incl. all forms of forced labor) for subcontractors' workers leading to allegation, litigation, fines or penalties towards ST as well as affecting ST social objectives, commitments and reputation, resulting in business loss	Risk	Potential	Upstream	Long term	Inherent basis	ST's responsible supply chain program	

(1) "Residual" refers to the materiality assessment that takes into account existing mitigation measures.

(2) "Inherent" refers to the materiality assessment without taking into account any existing mitigation measures.

S3 – Affected communities							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ⁽¹⁾ or inherent ⁽²⁾ basis	ST response	Targets
Negative impact on local communities from absolute level of public / potable water usage in local water basin due to Company scale resulting in significant relative weight of ST water consumption	Negative impact	Actual	Own operations	Short term	Residual basis	ST's community engagement program	We aim to certify 100% of our manufacturing sites through the Alliance for Water Stewardship (AWS) by 2035 (entity-specific).
Negative impact on local communities from absolute level of public / potable water usage in local water basin of subcontractors resulting in significant relative weight of water consumption	Negative impact	Actual	Upstream	Short term	Residual basis	ST's community engagement program	No target in place

(1) "Residual" refers to the materiality assessment that takes into account existing mitigation measures.

(2) "Inherent" refers to the materiality assessment without taking into account any existing mitigation measures.

G1 – Governance							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ⁽¹⁾ or inherent ⁽²⁾ basis	ST response	Targets
Risk of not being alerted or informed of situations / allegations / matters from own workforce that would require an assessment or investigation, which would expose the Company to reputational, financial and other liabilities	Risk	Potential	Own operations	Long term	Inherent basis	ST's whistleblowing program	No target in place
Risk of non-compliance with applicable anti-corruption / anti-bribery rules, which would expose the Company to reputational, financial and other liabilities	Risk	Potential	Own operations	Long term	Inherent basis	ST's anti-bribery and anti-corruption program	No target in place

(1) "Residual" refers to the materiality assessment that takes into account existing mitigation measures.

(2) "Inherent" refers to the materiality assessment without taking into account any existing mitigation measures.

3.4.2.4.B. Disclosure Requirements in ESRs covered by ST's sustainability statement (IRO-2)

The sustainability disclosures included in this sustainability statement, have been considered relevant based on the significance of this information to explain ST's approach to sustainability and our management of the material IROs assessed in the DMA we conducted in 2024.

A table showing the disclosure requirements covered by the sustainability statement is included in – Appendix 11.1. A table showing the data points that derive from other EU legislation is included in Appendix 11.2.

3.4.3 Environment

Approach

We are dedicated to managing our business operations in an environmentally responsible way.

We provide semiconductor solutions that play a role in helping to address environmental and social challenges. At the same time, our manufacturing operations require water, energy and chemical substances, and can have a negative impact on the environment. Minimizing our overall environmental footprint is a priority for ST.

Policies

Our approach to the environment is laid out in our Global Environmental Policy, which includes our Global Water Policy, and is incorporated into our strategy. This policy is available on st.com and is applied at global level and applicable to all ST entities and all ST employees. The Global Environmental Policy was in place during the reporting period, and was recently updated to more specifically address our material IROs identified in the 2024 DMA. For an overview of the relevant key elements of this policy, please refer to the policy overview table in Appendix 11.7.

Our Global Environmental Policy contains, *inter alia*, our ambition to reduce our negative environmental impacts, and risks arising from our own operations and that of our suppliers, to utilize environmental opportunities through various key actions, and states various of our goals, such as:

- to maintain an environmental management system based on standards and proven practices throughout the Company;
- to implement control measures and audits to check that appropriate environmental procedures are carried out and to identify and prioritize areas for improvement;
- to maintain relevant environmental certifications for all our manufacturing and large R&D sites worldwide;
- to comply with environmental regulations and other requirements globally and locally;
- to pursue improvement in our environmental performance;
- to provide appropriate training to our employees and provide all necessary information to our stakeholders; and
- to develop long-term partnerships with suppliers committed to responsible environmental standards and practices.

Our Global Water Policy, which is embedded in our Global Environmental Policy, more specifically, details our ambition to manage water-related impacts, including impacts of water pollution, through various key actions, such as:

- to apply water governance at all manufacturing sites, including water use, discharge, quality, and regulatory compliance; and
- regularly evaluating water flows and water balance.

Governance

Our CHRO is accountable for the implementation of the Global Environmental Policy. Our corporate environmental team is responsible for developing programs and procedures that enable us to work towards our environmental objectives. These are implemented by local ST site sustainability committees, each of which develops a roadmap according to the needs of their respective sites.

Our manufacturing sites have an EHS steering committee responsible for implementing the Global Environmental Policy. Each EHS steering committee includes representatives from various relevant departments and meets regularly to review relevant topics, such as environmental performance and/or compliance with local and national environmental standards and requirements. The outcomes of these reviews are shared with site management and appropriate actions are implemented where necessary.

ST environmental management system

Our environmental management system is aligned with international standards, including ISO 14001, ISO 50001 and EMAS. Our performance and management systems are evaluated annually through third-party surveillance audits, and we aim to renew our certifications every three years. Our main manufacturing sites are certified.

ISO 14001 and EMAS are internationally recognized frameworks that help organizations improve their environmental performance. ISO 14001 establishes a systematic approach for organizations to improve energy efficiency and decrease GHG emissions, reduce and recycle waste, conserve water, and control pollutants. EMAS builds on this by requiring detailed public reporting, enhancing transparency and accountability. Both frameworks encourage improvement in environmental performance and compliance with environmental regulations and best practices. ISO 50001 sets a standard for energy management, improving energy efficiency and reducing related consumption, thereby contributing to climate change mitigation.

Availability of policy

ST's employees, suppliers, partners and other stakeholders are key stakeholders in the Global Environmental Policy, which includes our Global Water Policy, and required for successful implementation of the policy. Training and information sharing sessions are deployed. Our Global Environmental Policy is available on st.com for everybody, including to potentially affected stakeholders and stakeholders who need to help implement it, and all STs environmental procedures implementing the commitments of the policy are available to ST's employees via ST's internal platforms.

3.4.3.1 Climate change (E1)

Climate related IROs (SBM-3)

The following table lists the IROs related to climate change we have identified and assessed as material in our 2024 DMA, including the programs or dedicated actions and (entity-specific) targets, we have in place to address such IROs.

E1 – Climate change mitigation							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ¹ or inherent basis ²	ST response	Targets
Negative impact on the environment, due to GHG emissions linked to our activities, contributing to climate change	Negative impact	Actual	Own operations	Short term	Residual basis	ST's carbon neutrality program	We aim to achieve a 20% overall reduction in absolute scope 1 and 2 emissions by 2030 vs 2024.
Negative impact on the environment, due to GHG emissions linked to suppliers' activities, contributing to climate change	Negative impact	Actual	Upstream	Short term	Residual basis	ST's carbon neutrality program	We aim to abate at least 90% of our climate adverse process gases ("CAPG") emissions by 2030 (entity-specific) (entity-specific).
Negative impact on the environment, due to GHG emissions linked to subcontractors' activities, contributing to climate change	Negative impact	Actual	Upstream	Short term	Residual basis	ST's carbon neutrality program	We aim to achieve a 10% reduction in our Scope 3 upstream GHG emissions by 2030, and a 20% reduction by 2035, vs 2024.
Negative impact on the environment, due to GHG emissions linked to distributors and customers activities, contributing to climate change	Negative impact	Actual	Downstream	Short term	Residual basis	ST's third-party management actions	No target in place

E1 – Climate change mitigation							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ¹ or inherent basis ²	ST response	Targets
Risk of not delivering on carbon neutrality roadmap commitments (Poor GHG emissions performance) leading to reduced stakeholders' engagement (customers, investors and talents), company reputation and increased need for offsetting	Transition Risk	Potential	Own operations	Long term	Inherent basis	ST's carbon neutrality program	We aim to achieve a 20% overall reduction in absolute scope 1 and 2 emissions by 2030 vs 2024. We aim to abate at least 90% of our climate adverse process gases ("CAPG") emissions by 2030 (entity-specific).
Risk of not being able to influence suppliers to deliver on their carbon neutrality roadmap commitments affecting ST's scope 3 performance	Transition Risk	Potential	Upstream	Long term	Inherent basis	ST's carbon neutrality program	We aim to achieve a 10% reduction in our Scope 3 upstream GHG emissions by 2030, and a 20% reduction by 2035, vs 2024.
Risk of not being able to influence subcontractors to deliver on their carbon neutrality roadmap commitments affecting ST's scope 3 performance	Transition Risk	Potential	Upstream	Long term	Inherent basis	ST's carbon STRike program (procurement)	No target in place.
Risk of not being able to influence distributors and customers to deliver on their carbon neutrality roadmap commitments affecting ST's scope 3 performance	Transition Risk	Potential	Downstream	Long term	Inherent basis	ST's third-party management actions	No target in place.

(1) "Residual" refers to the materiality assessment that takes into account existing mitigation measures.

(2) "Inherent" refers to the materiality assessment without taking into account any existing mitigation measures

E1 – Climate change adaptation							
Description	Type of IRO	Actual/Potential	Value chain segment	Time horizon	Material on a residual ¹ or inherent ² basis	ST response	Targets
Risk of natural catastrophe due to chronic and/or acute climate-related events damaging ST's assets, disrupting operations and causing business interruption	Physical Risk	Potential	Own operations	Long term	Residual basis	ST's climate adaptation program	No target in place
Risk of natural catastrophe due to chronic and/or acute climate-related events damaging suppliers' assets, disrupting operations and causing business interruption	Physical Risk	Potential	Upstream	Long term	Residual basis	ST's responsible supply chain program	No target in place
Risk of natural catastrophe due to chronic and/or acute climate-related events damaging subcontractors' assets, disrupting operations and causing business interruption	Physical Risk	Potential	Upstream	Long term	Residual basis	ST's climate adaptation program	No target in place
Risk of natural catastrophe due to chronic and/or acute climate-related events damaging distributors and customers assets, disrupting operations and causing business interruption	Physical Risk	Potential	Downstream	Long term	Residual basis	ST's third-party management actions	No target in place

(1) "Residual" refers to the materiality assessment that takes into account existing mitigation measures.

(2) "Inherent" refers to the materiality assessment without taking into account any existing mitigation measures.

E1 – Energy							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ¹ or inherent ² basis	ST response	Targets
Negative impact on other users from absolute level of energy consumption due to Company scale resulting in significant relative weight of ST electricity consumption in electricity grid	Negative impact	Actual	Own operations	Short term	Residual basis	ST's carbon neutrality program	We aim to adopt 100% renewable electricity by 2027 through energy procurement and renewable energy installations and maintain this percentage each year thereafter.
Negative impact on other users from absolute level of energy consumption of suppliers resulting in significant relative weight of electricity consumption in electricity grid	Negative impact	Actual	Upstream	Mid term	Residual basis	ST's carbon neutrality program	We aim to annually save energy, achieving cumulative energy savings of 100 GWh by 2035, versus the baseline year 2024 (entity-specific).
Negative impact on other users from absolute level of energy consumption of subcontractors resulting in significant relative weight of electricity consumption in electricity grid	Negative impact	Actual	Upstream	Short term	Residual basis	ST's carbon neutrality program	No target in place
Risk of increased power outages for ST due to climate change-induced conditions / events, or due to decision from public authorities (imposing planned or unplanned power outages or rationing), leading to business disruption or interruption	Transition Risk	Potential	Own operations	Long term	Residual basis	ST's carbon neutrality program	We aim to adopt 100% renewable electricity by 2027 through energy procurement and renewable energy installations and maintain this percentage each year thereafter. We aim to annually save energy, achieving cumulative energy savings of 100 GWh by 2035, versus the baseline year 2024 (entity-specific).

Risk of increased power outages for suppliers due to climate change-induced conditions / events, or due to decision from public authorities (imposing planned or unplanned power outages or rationing), leading to business disruption or interruption	Transition Risk	Potential	Upstream	Long term	Residual basis	ST's carbon STRIKE program	No target in place
Risk of increased power outages for subcontractors due to climate change-induced conditions / events, or due to decision from public authorities (imposing planned or unplanned power outages or rationing), leading to business disruption or interruption	Transition Risk	Potential	Upstream	Long term	Residual basis	ST's carbon neutrality program	No target in place
Risk of increased energy costs due to climate-related factors, or products / services / raw materials cost increase indirectly (through the value chain) impacting the Company's operating margin	Transition Risk	Potential	Own operations	Mid term	Residual basis	ST's carbon neutrality program	We aim to adopt 100% renewable electricity by 2027 through energy procurement and renewable energy installations and maintain this percentage each year thereafter.
Opportunity to reduce energy consumption per unit produced (8" equivalent wafer out) leading to increased profitability; or benefit from the development of renewable energy sources through LTAs and PPAs, and enhance company reputation	Opportunity	Potential	Own operations	Long term	Residual basis	ST's carbon neutrality program	We aim to annually save energy, achieving cumulative energy savings of 100 GWh by 2035, versus the baseline year 2024 (entity-specific).

(1) "Residual" refers to the materiality assessment that takes into account existing mitigation measures.

(2) "Inherent" refers to the materiality assessment without taking into account any existing mitigation measures

3.4.3.1.A. Climate-related impacts, risks and opportunities

Addressing climate-related physical risks

For climate-related physical risks, we have commissioned analyses conducted by third parties over the past years in order to understand the implications of climate change in terms of resilience of our strategy and business model. These included global analyses, as well as site-specific studies on climate-related risk, where necessary due to local conditions.

In 2021, we commissioned a study from an expert third-party (an environmental consultancy firm), which has been a valuable resource to help us understand the characteristics and implications of water scarcity on our operations. Additionally, in 2023, we commissioned an update of a science-based study from an expert third-party to assess the current and future climate risks on 155 assets (including all our main sites and those of our key manufacturing and logistics partners in our supply chain, located in 25 countries) (the "Climate Study").

This Climate Study has provided an overview of the inherent climate-related risks for the assets in scope.

The analysis was based on two climate change scenarios defined by the United Nations Intergovernmental Panel on Climate Change (the "IPCC"):

- an intermediate emissions scenario: SSP2-4.5 (mid-century warming of 1.6 to 2.5°C, end of century warming of 2.1 to 3.5°C versus preindustrial era); and
- a very high emissions scenario: SSP5-8.5 (mid-century warming of 1.9 to 3°C, end of century warming of 3.3 to 5.7°C versus pre-industrial era).

Specifically for each scenario and for each of the 155 assets, climate projections on 2030 and 2050 time horizons show likely evolutions across a range of indicators based on the Taxonomy classification of climate-related hazards, which might be temperature-related, wind-related, water-related or solid-mass erosion-related, including more specifically: cyclonic and non-cyclonic wind gusts, coastal and riverine floods, number of heavy precipitation days, freezing conditions such as cold wave duration and number of frost days, extreme heat conditions, including heatwave duration and number of hot days, drought including dry wave duration and water stress, and landslide.

In 2024, ST commissioned an expert third-party to provide additional scientific information in order for us to conduct additional analyses and to assess ST sites' preparedness for climate hazards.

In 2024, we completed the assessment of the robustness of existing infrastructure and equipment for one pilot site.

Overall, the purpose of these analyses was to obtain the residual level of climate-related physical risks for ST sites, defining our need for development of adaptation plans accordingly in alignment with our long-term sustainability targets. Ultimately, these different climate-related analyses feed our site-level business interruption risk assessments and business impact analyses, as well as our site resilience index.

While the conducted analyses were based on the latest climate modelling techniques, results inherently entail uncertainties in the assessment process.

Addressing climate-related transition risks

In our 2024 DMA, we also identified a number of IROs related to the transition to a lower-carbon economy. To identify transition risks and opportunities, we first leveraged the analysis we previously conducted under the TCFD. In this context, we identified transition risks and opportunities around market, policy and regulations, infrastructure robustness, resource efficiency, energy source and image TCFD categories considering potential climate related transition events. These potential transition events and associated transition risks and opportunities were initially identified based on inputs from key ST subject matter experts, as well as the key characteristics of our IDM business model.

The identified relevant climate related transition risks and opportunities were built upon in the 2024 DMA process and further completed and assessed leveraging additional expertise from our subject matter experts.

Overall, the potential climate related transition events included potential changes in laws and regulations (e.g. public authorities decisions, new regulations, new carbon pricing mechanisms), in supply market dynamics (e.g. evolution of energy prices, availability of renewable energy sources, products, services and raw materials cost variation), in end-market dynamics (e.g. customers behaviors versus climate change), in the robustness of our infrastructure and more broadly included stakeholders perception towards our carbon neutrality performance.

In our process, from a risk management standpoint, we assessed a climate scenario consistent with the UN Paris Agreement (i.e. strictly limiting climate change to 1.5°C with no or limited overshoot) to be unlikely based on current and evolving environmental context and associated uncertainties.

Simultaneously, regarding transition opportunities, we are actively investing in developing and launching new products to help our customers implement new energy saving applications, as further described in Section 3.4.3.5 (*Environment - EU Taxonomy Regulation*) below.

Continuous resilience assessment

The resilience of our IDM strategy and business model in relation to climate change will be regularly assessed through the monitoring of related targets.

Climate scenarios considered for determining material physical and transition risks were evaluated across the short, medium and long-term. Consistent time horizons were considered to set related targets.

Transition plan for climate change mitigation

We have not yet adopted a complete transition plan for climate change mitigation that meets all the elements contemplated by the ESRS. We are continuing to further develop such plan. The following elements of our contemplated transition plan for climate change mitigation were approved by our Executive Committee in 2024, and we are already actively taking steps on these topics, as detailed further below:

- Decarbonization of our own operations;
- Decarbonization of our supply chain;
- Development of technologies and products that aim to reduce GHG emissions across their life cycle.

Each of these topics are covered in our policies (further details included in Section 3.4.3.1.B. (*Climate change - Policies related to climate change mitigation and adaptation*)), with the actions included and deployed in actions plans. We have also set targets on the first two elements: our targets on GHG emissions reduction (further details included in Section 3.4.3.1.C. (*Climate change - Actions, targets and resources in relation to climate change policies*)). These targets and identified decarbonization levers are a key element for us to develop further within our transition plan for climate change mitigation.

We aim to finalize our transition plan for climate change mitigation within the applicable legal framework, in the coming years and we will continue to report on our progress.

We are not excluded from the EU Paris-aligned Benchmarks.

3.4.3.1.B. Policies related to climate change mitigation and adaptation

Our approach and policies

Our Global Environmental Policy states our approach to managing environmental impacts, risks and opportunities through various key actions. This policy is available on st.com, for everybody, including to potentially affected stakeholders and stakeholders who need to help implement it, and applied at global level and applicable to all ST entities and all employees. Our CHRO is accountable for its implementation.

Climate change mitigation and climate change adaptation are an integral part of our Global Environmental Policy.

To mitigate potential negative impacts on the environment due to GHG emissions in our own operations, our Global Environmental Policy contains our aim to minimize our direct GHG emissions, as well as to maintain relevant environmental certifications for all our manufacturing and large R&D sites worldwide and provide appropriate training and relevant information to our employees. Additionally, it includes our ambition to secure robust internal and external controls, and audits to check that environmental procedures are carried out and to identify and prioritize areas for improvement.

To mitigate potential negative impacts on the environment due to GHG emissions in our supply chain, our Global Environmental Policy contains our dedication to minimize our upstream GHG emissions, to develop long-term partnership with suppliers which have responsible environmental standards and practices, while regularly engaging with our stakeholders and providing them with relevant information.

In connection with the energy-related IROs, the policy states our ongoing objective to manage energy consumption, improve energy efficiency, and source renewable energy.

Finally, regarding climate change adaptation, the Global Environmental Policy includes our ambition to define and implement climate adaptation plans addressing relevant climate-related risks in order to cope with the risk of natural catastrophe due to chronic and/or acute climate-related events damaging ST's assets disrupting operations and causing business interruption.

3.4.3.1.C. Actions, targets and resources in relation to climate change policies

3.4.3.1.C.1. Climate change mitigation

In 2020 we announced our commitment to become carbon neutral by 2027, with an intermediate milestone, to be achieved by 2025, endorsed by the Science Based Targets Initiative ("SBTi"). In 2024 we set an additional target: (i) to achieve a 20% (in absolute: 142 ktCO₂eq) overall reduction in absolute scope 1 and scope 2 market-based GHG emissions by 2030 versus the baseline year 2024, whereby 54% relates to scope 1 reductions and 46% to scope 2 reductions; as well as (ii) the target to achieve a 10% (in absolute: 384 ktCO₂eq) reduction in our scope 3 upstream GHG emissions by 2030, and a 20% (in absolute: 768 ktCO₂eq) reduction by 2035, versus the baseline year 2024.

The baseline values of these targets are included in Section 3.4.3.1.D.1 (*Metrics related to climate change mitigation and adaptation - Gross scope 1,2,3 and Total GHG emissions*). We have set the baseline value against which the progress toward the targets is measured, to be representative in terms of site activities covered and the influences from external factors, since the baseline value is consistent with the current calculation methodology, using IPCC Global Warming Potential AR5, related to target time horizon. In next year's reporting, the updated calculation methodology IPCC Global Warming Potential (GWP) AR6 will be used. Specifically with regard to the target relating to our scope 3 upstream emissions, we have sought to make it representative in terms of procurement activities covered and the influences from external factors, by assessing impacts of future eventual changes, including technology and outsourcing model potential impact related to target time horizon.

These targets are consistent with our GHG inventory boundaries as they are percentage reduction targets within the relevant scope.

These additional targets have not yet, but will be submitted to SBTi, and so their compatibility with limiting global warming to 1.5 degree is not yet validated.

Climate change mitigation: actions and targets to reduce GHG emissions from ST operations (scope 1 and scope 2)

We aim to address the negative impact on the environment, due to GHG emissions linked to our own operations, contributing to climate change, through actions and targets associated with three decarbonization levers:

- decrease climate adverse process gases (“CAPG”) emissions;
- purchase renewable energy; and
- improve energy efficiency.

Decarbonization lever 1: Decrease climate adverse process gases (“CAPG”) emissions (entity-specific target)

The use of climate adverse process gases (“CAPG”) is inherent to the semiconductor industry, as there are currently no alternative substances for some parts of the semiconductor foundry manufacturing process. CAPG are gases with a high global warming potential used in production processes. ST is collaborating within the semiconductor sector with industry experts, partners and suppliers to find technical solutions for decreasing the quantities of CAPG used in our industry or replacing GHG intensive climate adverse process gases with lower GHG intensive ones.

The GHG emitted by the use of CAPG accounts for the highest share of our direct air emissions (scope 1). It is therefore a central part of our environmental strategy to reduce their use and to ensure that they are treated appropriately before being released into the atmosphere.

ST aims to abate at least 90% of its CAPG GHG emissions by 2030 vs. 2024, by installing point of use CAPG abatement systems in our manufacturing sites. These abatement systems treat and destroy CAPG molecules before emission in the air, thus decreasing the GHG impact of our manufacturing process. This entity-specific target is based on conclusive scientific evidence, as the impact of CAPG abatement systems on GHG emissions from CAPG is defined in the IPCC-2019 standard.

The percentage of abatement of CAPG GHG emissions is defined as the share of emission reduction out of the total of CAPG GHG emission without abatement. The 90% abatement ratio has been calculated simulating the effect of all new abatement systems planned to be installed by 2030. Our target is aligned with the current sectorial guidance from the ESIA, which has defined 85% as the 2030 target for abated CAPG GHG emissions. The definition of the target is based on the current status of ST's business and the WSC methodology.

In 2024 we abated 76% of CAPG GHG emissions, covering our fourteen main manufacturing sites, three large R&D sites and one EWS site, as detailed in the table included in Appendix 11.9.

The GHG reduction associated to installation of new CAPG abatement systems is estimated to be around 24% of the overall decarbonization effort relating to scopes 1, 2 and 3 by 2030 versus 2024, with the assumption of constant ST data activity and same GHG computation methodology throughout the 2024-2030 target period. The methodology to compute the GHG emission is further described in Section 3.4.3.1.D.1 (*Metrics related to climate change mitigation and adaptation*).

Decarbonization lever 2: Purchase renewable energy

Our second lever on GHG emission reduction in our own operations is sourcing renewable energy, in order to decrease our scope 2 market-based GHG emissions. We aim to transition to 100% renewable

electricity sourcing by the end of 2027 and maintaining this percentage each year thereafter. This target is based on conclusive scientific evidence on the impact of renewable energy on GHG emission.

The main actions to reach 100% of renewable electricity procurement by 2027 are:

- develop internal competence and a roadmap for sourcing renewable electricity through PPAs and engage expert consultants to advise us to secure ramp-up of ST electricity share from PPA contracts;
- procure unbundled EACs. We manage and monitor an annual roadmap, budget and action plan for our Global Procurement Organization to procure EACs on all relevant locations; and
- whenever possible, implement onsite installations for renewable energy production.

The scope for this energy target includes ST operations only, covering ST's fourteen main manufacturing sites, three large R&D sites and one EWS site, as detailed in the table included in Appendix 11.9.

The GHG reduction associated to procuring 100% renewable electricity, is estimated to be around 19% of the overall decarbonization effort relating to scopes 1, 2 and 3 by 2030 versus 2024, with the assumption of constant ST data activity and same GHG computation methodology throughout the 2024-2030 target period. In practice, ST data activity and GHG computation methodology will be variable along the period 2024-2030, and the actual GHG reduction will depend on, amongst others, these variables.

The percentage of renewable energy we consumed in 2024 is included in Section 3.4.3.1.D.1 (*Metrics related to climate change mitigation and adaptation - Energy mix in percentage*), and includes electricity as well as other sources of energy.

Renewable electricity is purchased or self-generated electricity coming from recognized renewable sources, such as solar, wind, hydro or geothermal. We consider as renewable electricity, electricity sourced through renewable contractual instruments signed by ST: EAC, renewable PPA and onsite electricity generation from solar panel. The percentage of renewable electricity is the ratio between the total renewable electricity and the total electricity consumption. Our baseline 2024 value for renewable electricity is 84%. This ratio is reviewed quarterly and our progress is in line with our 2020 commitment to reach carbon neutrality by 2027 with 100% electricity coming from renewable sources. The performance trends are stable with no significant changes identified towards achieving our target.

Decarbonization lever 3: Improve energy efficiency (entity-specific target)

ST is investing in energy savings projects, in order to improve energy efficiency, to use more renewable energy sources, and to reduce our scope 1 and 2 GHG emissions. ST also takes decarbonization actions in its own operations by implementing energy conservation projects, that improve energy efficiency at equivalent production levels, by monitoring energy consumption and productions, and regular maintenance and upgrade of its facilities equipment in ST manufacturing sites. In this regard ST set an entity-specific target to annually save energy, achieving cumulative energy savings of 100 GWh by 2035, versus the baseline year 2024.

The energy saving target relates to the absolute volume of energy consumption saved annually and has been set by taking into account the list of energy conservation projects included in sites' multiple years plan, accordingly, a cumulative saving of 100 GWh by 2035, versus the baseline year 2024, has been estimated. The implementation of energy conservation projects has yet to start, and therefore the baseline value is zero.

In order to reach this energy saving target by 2035 we are taking the following actions:

- we conduct regular maintenance on our facilities equipment and arrange expert third-party review of our assets to identify opportunities for improvement of energy efficiency;
- install digital monitoring systems for energy in all our manufacturing sites;

- arrange regular ISO 50001 certification audit and certification by a third-party of our main manufacturing sites, to validate that an adequate energy management system is in place and that annual optimization targets are set in each of those sites;
- create a company roadmap for energy saving with associated annual targets per manufacturing site; and
- we conduct annual investments to upgrade the least energy efficient facilities equipment.

The scope for this energy target includes ST operations only, covering ST's fourteen main manufacturing sites, three large R&D sites and one EWS site, as detailed in the table included in Appendix 11.9.

The new installations bringing energy savings will be followed through meters and monitored. Energy savings will be accredited by a third-party and maintained during the life of the equipment.

In defining the target the following main assumption has been taken into account: that there will be no significant change in facilities installations, which negatively affects the execution of the intended actions needed to reach the target.

The GHG reduction associated to this energy saving target, is estimated to be less than 2% of the overall decarbonization effort relating to scopes 1, 2 and 3 by 2030 versus 2024.

Climate change mitigation: actions and targets to reduce GHG emissions from ST supply chain (scope 3)

Complementing ST actions to mitigate climate change within its own operations, ST aims to work with its partners in its supply chain to encourage them to reduce their GHG emissions.

ST has launched a supply chain decarbonization program to reduce its scope 3 emissions related to the purchase of goods and services. We aim to deploy several actions from 2024 onwards, which will be focused on our tier one high emitting suppliers. For overall reduction of our carbon footprint, the scope includes goods and services suppliers of ST, procurement being accounted in scope 3.1 and scope 3.2.

ST aims to achieve a 10% reduction in its scope 3 upstream GHG emissions by 2030, and a 20% reduction by 2035, versus the baseline year 2024. The scope of the reduction target is identical to the inventory of the carbon footprint calculation for scope 3.1 to scope 3.8 categories. with specific focus on decarbonization on goods and services procurement (scope 3.1 and 3.2 categories).

This target is based on conclusive scientific evidence, namely using IPCC.

This target is set based on, amongst others:

- the GHG Protocol Guidance for scope 3 calculation to manage carbon accounting for scope 3.
- a review of our suppliers' public targets on GHG reduction by 2030, and build a strategy and roadmap for the decarbonization of our supply chain.

To meet this target by 2035, ST has identified three levers and takes the following actions:

Lever 1: review and reduce GHG emissions from our top five subcontractors

An assessment of subcontractors for their GHG impact and GHG reduction roadmap has been completed, giving ST an understanding of its suppliers' maturity and roadmap towards reducing their GHG emissions.

The GHG reduction associated to this lever, is estimated to be around 14% of the overall decarbonization effort relating to scopes 1, 2 and 3 by 2030 versus 2024.

Lever 2: review and reduce GHG emissions from top fifty goods and services suppliers

An assessment of goods and services suppliers for their GHG impact and GHG reduction roadmap has been completed, giving ST an understanding of its supplier maturity and roadmap towards reducing their GHG emissions.

The GHG reduction associated to this lever, is estimated to be around 33% of the overall decarbonization effort relating to scopes 1, 2 and 3 by 2030 versus 2024.

Lever 3: engage with all suppliers on GHG reduction opportunities

To increase supplier awareness of ST decarbonization targets, in 2024, we have implemented various sustainability e-learning for the Global Procurement Organization. The next step will be to increase the supplier awareness through communication on relevant ST targets.

To manage suppliers towards decarbonization and to influence suppliers towards decarbonization, ST has integrated carbon reduction criteria into its procurement processes (such as our tendering, new supplier onboarding and supplier evaluation and monitoring processes).

The GHG reduction associated to this lever, is estimated to be around 8% of the overall decarbonization effort relating to scopes 1, 2 and 3 by 2030 versus 2024.

CapEx related to climate change mitigation actions

In millions of U.S. dollars	December 31, 2024
Financial resources allocated to action plan (CapEx)	28

As of December 31, 2024, the total CapEx related to climate change mitigation actions amounted to \$28 million mainly driven by CAPG abatement systems installation. This amount has also been considered in our eligible CapEx as individual measures. Please refer to Section 3.4.3.5 (*EU Taxonomy*) for further information.

OpEx related to climate change mitigation actions

In millions of U.S. dollars	December 31, 2024
Financial resources allocated to action plan (OpEx)	6

As of December 31, 2024, the total OpEx related to climate change mitigation actions amounted to \$6 million mainly driven by the purchase of energy certificates. The amount is reported on the line "Power and gas" in Note 7.6.27 of our consolidated financial statements (Please refer to Section 7).

Future financial resources related to climate change

Please refer to Section 3.2.4 (*Business Overview and Performance - Financial Outlook: Capital Investment*) for CapEx and Section 7.6.36 (*Notes to the Consolidated Financial Statements - Commitments, contingencies, claims and legal proceedings*) for OpEx.

3.4.3.1.C.2. Carbon neutrality

We aim to be carbon neutral each year from 2027, in all direct and indirect emissions (scopes 1 and 2), product transportation, business travel, and employee commuting emissions (our scope 3 focus).

To achieve carbon neutrality by the end of 2027, ST will offset its residual GHG emissions from its own operations through purchasing of carbon credits, considering recognized quality standards for carbon credits from GHG emissions reduction projects.

We are planning to develop a portfolio of carbon offset projects based on a long-term engagement in local projects and innovative solutions.

Our aim is to combine nature-based solutions with technological solutions, to cover carbon sequestration. Our strategy will be implemented in the coming years in collaboration with our stakeholders, based on local opportunities.

We are working with an external expert advisor to identify the most appropriate carbon credits registry and carbon offsetting projects developers. Based on this assessment, we will define a roadmap and a budget for offsetting our residual emissions for own operations starting 2026. Hence for this reporting year, ST has not included any removals, or any purchased, sold or transferred carbon credits, or any allowances in the calculation of scope 1 nor scope 2 GHG emissions as disclosed in 3.4.3.1 E (*Metrics*).

3.4.3.1.C.3. Climate change adaptation

As mentioned above, based on the assessment of climate-related risks in the Climate Study, we will conduct further extended analyses on our manufacturing sites to define the need for the development and implementation of adaptation plans and maintain business continuity.

In 2024, ST commissioned an expert third-party to provide additional scientific information in order for us to conduct additional analyses and to assess ST sites' preparedness for climate hazards.

In 2024, we completed the assessment of the robustness of existing infrastructure and equipment for one pilot site. We aim to complete and maintain climate risk assessments for all manufacturing sites including risks of floods, heat, and drought, aiming to identify and implement actions needed for business continuity purposes in relation to physical climate risks. These actions are ongoing.

3.4.3.1.D. Metrics related to climate change mitigation and adaptation

3.4.3.1.D.1. Metrics

Energy consumption and mix (E1-5)

In Megawatt-hour	December 31, 2024
Fuel consumption from coal and coal products	—
Fuel consumption from crude oil and petroleum products	7,023
Fuel consumption from natural gas	284,239
Fuel consumption from other fossil sources	—
Consumption of purchased or acquired electricity, heat, steam, and cooling from fossil sources	340,811
Total energy consumption from fossil sources	632,073
Total energy consumption from nuclear sources	74,394
Fuel consumption from renewable sources	—
Consumption of purchased or acquired electricity, heat, steam, and cooling from renewable sources	2,643,981
Consumption of self-generated non-fuel renewable energy	6,071
Total energy consumption from renewable sources	2,650,052
Total energy consumption	3,356,519
Total energy consumption from activities in high climate impact sectors	3,356,519

In this reporting year, ST's total energy consumption amounted to 3,356,519 MWh out of which 632,073 MWh related to fossil sources, 74,394 MWh related to nuclear sources and 2,650,052 MWh related to renewable sources. This includes the energy consumption for our fourteen manufacturing sites, three large R&D sites and one EWS site. The amount of energy resulting from our warehouses, laboratories and sales offices is not captured for this reporting year. It is estimated to be around 1% of ST's total energy consumption. ST is planning to capture the remaining energy consumption for our next reporting period. The reported amounts correspond either to meter reading, invoices or certificates received from external providers.

As a manufacturer of semiconductor devices which are electronic components, ST activities belong to the NACE code 26.11 "Manufacture of electronic component". According to the Commission delegated Regulation (EU) 2022/1288 and in Annex I to Regulation (EC) No 1893/2006 of the European Parliament and of the Council, the NACE code 26.11 "Manufacture of electronic component" is classified in section C-Manufacturing. This section C-Manufacturing is considered as a high climate impact sector. As such, the entire perimeter of ST activities is considered as operating in high climate impact sector.

As ST has all its operations in high climate sector, it has disaggregated the total energy consumption from fossil sources by consumption from crude oil and petroleum products 7,023 MWh, from natural gas 284,239 MWh and from consumption of purchased or acquired electricity, heat, steam, or cooling from fossil sources 340,811 MWh. ST does not consume fuel from coal and coal products nor from other fossil sources.

Energy mix in percentage

In percentage	December 31, 2024
Share of fossil sources in total energy consumption	19%
Share of nuclear sources in total energy consumption	2%
Share of renewable sources in total energy consumption	79%
	100%

As of December 31, 2024, the share of renewable energy in ST overall energy mix amounted to 79%. ST's energy consumption from renewable sources amounted to 2,650,052 MWh and relates to three different type of sources (i) onsite generation from solar panels, (ii) offsite purchasing power agreement and (iii) Energy Attributes Certificates. ST does not consume fuel from renewable sources including biomass or other related type.

Energy production

In Megawatt-hour	December 31, 2024
Non-renewable energy production	—
Renewable energy production	6,071

At ST, we do not produce non-renewable energy for our operations. Certain of our sites have onsite generators that are able to produce non-renewable energy in case of emergency situation. The amount of energy produced in this reporting year is considered as not material. None of ST's sites are using coal to produce energy. In this reporting year, we produced renewable energy for a total of 6,071 MWh. It mainly comes from the installation of solar panels.

Energy intensity based on net revenue

In Megawatt-hour per millions of U.S. dollars	December 31, 2024
Total energy consumption per net revenue	253

The energy intensity amounted to 253 MWh per million of U.S. dollars, where the numerator is ST total energy consumption and the denominator is ST total revenues as reported on the consolidated income statement for the year ended December 31, 2024.

Gross scope 1,2,3 and Total GHG emissions

Gross scope 1 GHG emissions

In tCO ₂ eq	December 31, 2024
Scope 1 GHG emissions from the consolidated accounting group	538,136
% of Scope 1 GHG emissions from regulated emission trading schemes	— %

As of December 31 2024, the total amount of scope 1 GHG emissions in tCO₂eq amounted to 538,136 for ST captured perimeter. Please refer to 3.4.2.1 (*General basis for preparation*).

To compute our scope 1 GHG emissions, the principles, requirements and guidance provided by the GHG Protocol Corporate Standard were considered.

ST computed the emissions of CO₂, CH₄, N₂O, HFC, PFC, SF₆ and NF₃. For PFCs, emission factors from the IPCC 5th Assessment Report were used and integrated into a calculation tool. With regards to calculation methods, ST followed the IPCC-2019 Standard – Chapter 6: Electronics Industry Emissions

and specifically tier 2c and GWP100 values as per application requirement 39 of the ESRS E1. The tier 2c method distinguishes process types for all GHGs, and considers wafer sizes, i.e. between ≤ 200 mm and 300 mm. In addition, the method provides estimates of the quantities of fluorinated compounds exhausted from tools which are connected to emission control systems.

For scope 1 GHG emissions, ST calculated GHG emissions from stationary combustion, mobile combustion, process emissions and fugitive emissions. ST used two activity data “energy related emissions” with the emission factor database of the International Energy Agency (“IEA”) as emission factor source and PFC and HFC leakages with IPCC Fifth (AR5) and Fourth (AR4) Assessment report of the IPCC, that includes the non-renewable fuel consumption.

ST will perform regular reviews of the latest available emission factor and will update relevant ones to IPCC AR6 for the next reporting period.

For this reporting year, ST did consider GHG related to Heat Transfer Fluids (“HTF”) which are considered fugitive emissions. HTF is a refrigerant used in a closed loop which is not supposed to leak, however it might be partly released or discharged during maintenance. Due to inability to measure accurately the related emissions, and lack of standards and guidance regarding the GWP of all the fluids, ST made a preliminary estimate out of its total scope 1 emissions. Total amount of GHG emissions related to HTF amount to 101,810 tCO₂eq which represents 19% of total scope 1 emissions.

ST will further refine this estimate by integrating operational data into the modelling and aligning within the World Semiconductor Council while working on identifying processes to segregate initial filling volumes purchased from fugitive emissions from maintenance activities. ST does not have any biogenic emissions.

In this reporting year, no scope 1 GHG emissions were covered by regulated emission trading schemes.

Gross scope 2 GHG emissions

In tCO ₂ eq	December 31, 2024
Location-based Scope 2 GHG emissions from the consolidated accounting group	864,057
Market-based Scope 2 GHG emissions from the consolidated accounting group	171,347

In this reporting year, the total amount of scope 2 GHG emissions for ST amounted to 864,057 tCO₂eq with a location-based approach and to 171,347 tCO₂eq with a market-based approach.

To compute our location-based and market-based scope 2 GHG emissions, the principles, requirements and guidance provided by the GHG Protocol scope 2 guidance were considered. As such, the location-based amount reflects the average emissions intensity of grids on which energy consumption occurs while the market-based method reflects emissions from electricity that ST was able to drive. The latter, derives emission factors from contractual instruments.

For location-based approach, the amount includes purchased electricity and super-heated water consumed by ST during the reporting period. ST applied the location-based method with average energy generation emissions factors. For electricity related emissions, the International Energy Agency database of emissions factors was used for all countries except for France, where ADEME, the French Agency for Ecological Transition dataset was used. For super-heated water used on one of our sites, the emissions factor provided by the supplier was used.

For the market-based approach, on top of super-heated water and electricity from grid, ST considered three types of renewable electricity instruments: EACs, offsite PPAs for two manufacturing sites, and onsite generation for three sites coming from solar panels. ST defined at corporate level a renewable procurement strategy for each site and reallocates each certificate according to each site’s targets. EACs can be procured whether unbundled i.e. separately from the underlying energy produced or bundled.

GHG emissions other than CO₂ (e.g. CH₄ or N₂O) are included from location-based grid average emissions factors and from the market-based method information used in the computation of ST scope 2 GHG emissions.

Gross scope 3 GHG emissions

In tCO ₂ eq	December 31, 2024
1 Purchased goods and service	2,903,098
2 Capital goods	449,764
3 Fuel and energy-related activities	259,815
4 Upstream transportation and distribution	126,762
5 Waste generated in operations	4,332
6 Business traveling	39,182
7 Employee commuting	54,403
8 Upstream leased assets	—
Total Gross indirect (Scope 3) GHG emissions (excluding scope 3.11)	3,837,356

ST has disclosed in the above table the scope 3 GHG emissions for scope 3 categories that are a priority for ST. This prioritization is based on the targets defined this reporting year. Please refer to Section 3.4.3.1.C. (*Climate change - Actions, targets and resources in relation to climate change policies*).

ST considered the GHG Protocol guidance related to companies producing intermediate products and other elements further detailed below. ST is not reporting on scope 3.11 for this reporting period. This category relates to the use of sold products.

The determination of GHG emissions related to the use of sold products presents a high level of complexity and uncertainty. The complexity lies in the integration of semiconductor devices in end-products and its consequent impact on GHG during usage. Semiconductor devices have many potential downstream applications each with a different GHG emissions profile. This variability requires ST to make significant and multiple assumptions in order to model the downstream emissions associated with the various possible end applications. Additionally, current standards and industry associations provide no guidance to support these complex calculations.

ST does not have sufficient end-application data and industry-specific guidance available, which limits its ability to make reasonable assumptions for estimating the amount of GHG emissions for scope 3.11. Despite being a significant category among all our scope 3 emissions, ST is unable to report on the GHG emissions for scope 3.11 related to the use of sold products. ST is planning to work on the means to facilitate the collection of use-phase related data, in line with its external commitment and strategy. ST will engage with stakeholders to further work on this reporting element.

To compute scope 3 reported amounts, ST considered the principles, requirements and guidance provided by the GHG Protocol "Corporate Value Chain (Scope 3) Accounting and Reporting Standard along with the GHG Protocol Technical Guidance for calculating Scope 3 emissions". The fifteen scope 3 categories from this standard have been screened.

The reporting boundaries considered in the calculation methods either cover the financial consolidated perimeter (e.g. scope 3.1 and 3.2) or the sustainability statement perimeter (e.g. scope 3.5 or 3.3). As such, these categories will be adjusted in future reporting period in light with our other environmental metrics.

The calculation methods for estimating the GHG emissions either follow a spend-based approach or a distance-based or an average-data method, as described in the GHG Protocol.

Emission factors from various databases were used: IEA, Biogenic Emission Inventory System ("BEIS"), US Environmental Protection Agency ("EPA") Supply Chain, Defra, Ademe and Ecoinvent 3.8 or 3.10 database were used.

ST is not using a specific scope or carbon tool for its computation and leverage existing tool with the addition of data analytic and visualization software.

- scope 3.1 amounted to 2,903,098 tCO₂eq and relates to the GHG emissions of our purchased goods and services. Based on the GHG Protocol, two main approaches have been considered, the spend-based method and the average-data method, with a priority on average-data method when information on emission factor related to specific goods or services category was available along with quantity associated to relevant activity data. We have screened all relevant spend categories;
- scope 3.2 amount to 449,764 tCO₂eq and relates to the GHG emissions of our equipment, building or IT related services. The same approach and methodology as for the scope 3.1 was used;
- scope 3.3 amount to 259,815 tCO₂eq and relates to GHG emissions of fuel and energy-related activities not accounted for in scope 1 or scope 2. It includes fuel consumed by leased company cars, other fuel consumed by power generators and gas from boilers or power back-up generators or catering equipment, and super-heated water. It also includes transmission and distribution losses related to ST electricity consumption. Emission factors applied on these categories related to energy upstream phase (production and transport). The location-based methodology is used along with average-data method;
- scope 3.4 amount to 126,762 tCO₂eq and relates to the GHG emissions of our products' logistic flows and storage activities. The distance-based methodology described in the GHG Protocol was followed for our logistic flows and the spend-based approach was used for our storage activities;
- scope 3.5 amount to 4,332 tCO₂eq and relates to the GHG emissions from third-party disposal and treatment of waste generated by ST. It includes emissions from disposal of solid waste and wastewater. Based on the GHG Protocol, the waste-type specific method was followed;
- scope 3.6 amount to 39,182 tCO₂eq and relates to the GHG emissions from the transportation of employees for business related activities in vehicle owned or operated by third-parties such as aircraft, trains, shuttles, taxi, car rental. Based on the GHG Protocol, the distance-based and the spend-based methods were followed;
- scope 3.7 amount to 54,403 tCO₂eq and relates to the GHG emissions from the transportation of employees between their home and their place of work. It includes various transportation modes: automobile including carpooling, bus, rail, tramway, subway and motorcycles. Based on the GHG Protocol, the distance-based method was followed. For scope 3.6 and 3.7, the parameters required for the calculation are integrated in a tool providing the total amount; and
- scope 3.8 is not applicable for ST as of December 31, 2024. Where ST does have upstream leased assets such as building or equipment, they are considered under IFRS as finance leases and as such shall be accounted in scope 2. At this stage, as explained in our basis of preparation they have not been considered for this reporting year.

Some categories were not relevant for ST such as categories 3.13, 3.14 and 3.15.

Other categories were not disclosed considering the criteria provided by ESRS to identify the significance i.e. magnitude of GHG emissions, influence, related transition risks and opportunities and stakeholder views. This is valid for the following categories: scope 3.9, 3.10 and 3.12.

We have not received primary data obtained from suppliers or other value chain partners. Scope 3 calculation methods used rely on estimates with limited guidance available from the standards. The variability of the scope 3 disclosed amounts exists and underlying numbers might be adjusted in the coming years following potential revision of the standard, specific data received by value chain stakeholders or precision on emission factors.

In addition, our ability to receive primary data from suppliers or other value chain partners is highly dependent from the evolution of external requirements, the ability of these stakeholders to calculate and provide the information to us and our variety of partners with operations worldwide. If the availability and quality of information from our value chain partners improves in the future we expect to enhance our

methodology for value chain reporting. However, we expect the scope 3 to remain an estimated amount with high variability, for the coming reporting years.

The total amounts of GHG emissions, included in this statement, are also subject to this variability as they include scope 3 GHG emissions.

Total GHG emissions

In tCO ₂ eq	December 31, 2024
Total GHG emission (location-based)	5,239,549
Total GHG emission (market-based)	4,546,839

ST emitted in this reporting year 5,239,549 tCO₂eq GHG emissions using the location-based method and 4,546,839 tCO₂eq GHG emissions using the market-based method.

GHG intensity based on net revenue

tCO ₂ eq per millions of U.S. dollars	December 31, 2024
Total GHG emissions (location-based) per net revenue	395
Total GHG emissions (market-based) per net revenue	343

As of December 31, 2024, the GHG intensity based on net revenue amounted to 395 tCO₂eq per millions of U.S. dollars, using the location-based approach to compute GHG emissions and to 343 tCO₂eq per millions of U.S. dollars using the market-based approach to compute GHG emissions where the numerator is ST total GHG emissions (location-based and market-based respectively) and the denominator is ST total revenues as reported on the consolidated income statement for the year ended December 31, 2024.

3.4.3.2 Pollution and Chemicals (E2)

It is our priority to responsibly manage chemicals and replace hazardous substances wherever possible. We carefully manage the chemical substances and materials we use throughout our operations. This allows us to monitor and address our impacts on people and the environment and to comply with legal and customer requirements.

3.4.3.2. Pollution related IROs (SBM-3)

The following table lists the IROs related to pollution and chemicals we have identified and assessed as material in our 2024 DMA, including the programs or dedicated actions and (entity-specific) targets, we have in place to address such IROs.

E2 – Pollution and chemicals							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ¹ or inherent ² basis	ST response	Targets
Negative impact from ST on local natural ecosystems caused by existing and / or accidental pollution (e.g., hazardous chemicals and gases use and handling) of soil / air / water / living organisms and food resources	Negative impact	Actual	Own operations	Short term	Residual basis	ST's pollution program	We aim to further decrease Volatile Organic Compound (VOC) emissions from ST's manufacturing sites, to achieve an overall 70% absolute reduction by 2030 vs 2024.
Negative impact from the suppliers on local natural ecosystems caused by accidental pollution (e.g., hazardous chemicals and gases use and handling) of soil / air / water / living organisms and food resources	Negative impact	Potential	Upstream	Long term	Residual basis	ST's responsible supply chain program	No target in place

E2 – Pollution and chemicals							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ¹ or inherent ² basis	ST response	Targets
Negative impact from subcontractors on local natural ecosystems caused by accidental pollution (e.g., hazardous chemicals and gases use and handling) of soil / air / water / living organisms and food resources	Negative impact	Potential	Upstream	Mid term	Residual basis	ST's responsible supply chain program	No target in place
Risk of not being able to substitute hazardous materials (substances of concern and very high concern) and heavy metals (e.g., lead) in processes and products, in line with increasing customers' requirements and / or enactment or reinforcement of regulations banning, restricting or reinforcing obligations on: - handling and storage of materials / gases (e.g. hydrogen) / chemicals (e.g. acids) - usage of materials / gases (e.g. PFCs) / chemicals (e.g. PFAS) in production processes and products - pollution mitigation measures (air, water, soil) regarding materials / gases (e.g. PFCs) / chemicals (e.g. PFAS) resulting in additional direct / indirect (through the value chain) costs and/or capacity reduction	Risk	Potential	Own operations	Long term	Residual basis	ST's chemical program	We aim, alongside our efforts to continuously assess substances of very high concern and substitution, to make all products manufactured at ST 98% halogen-free by 2035 (entity-specific).

(1) "Residual" refers to the materiality assessment that takes into account existing mitigation measures.

(2) "Inherent" refers to the materiality assessment without taking into account any existing mitigation measures.

3.4.3.2.A. Processes to identify and assess material pollution-related impacts, risks and opportunities

We screened our sites and operations and have identified material negative pollution related impacts on local natural ecosystems which may be generated by the nature of our manufacturing operations, being an IDM. The assessment was conducted considering the mitigating measures already in place for identifying potential air, water and soil contamination and de-pollution needs in specific areas of our site locations and were considered material on a residual basis.

We assumed that our subcontractors might also generate material negative pollution related impacts on local natural ecosystems due to the nature of their activities which are similar to ours and their geographical locations. For suppliers, we also considered the broad panel of activities they provide us with.

To assess material pollution-related IROs, for both our own operations and for subcontractors, magnitude and likelihood were assessed, considering the several types of chemicals used in the semiconductor manufacturing process as well as the mitigation measures in place and past pollution-related incidents.

We strive to reduce the use of hazardous substances and to find substitutes. We assessed the related identified risk considering the complexity of our manufacturing processes and the current state of pollution management technology.

Engagement with affected communities

We believe that conducting consultation, including with affected communities, is essential for working towards common goals and addressing pollution-related challenges. Our engagement with affected communities takes place on an ad hoc basis as needed, based on the engagement process described in Section 3.4.2.3.B. (*Strategy - Interests and views of stakeholders*). ST sites actively engage with communities and national and local authorities, according to their specific needs and the local context. This can include local non-governmental organizations ("NGOs"), community organizations or town hall events to address community concerns. Engagement with affected communities is not standardized across all ST sites, but is organized specifically taking into consideration local circumstances. This engagement aims to provide relevant insights which can inform decision making processes at local level and improve our ability to manage and mitigate pollution-related negative impacts effectively.

3.4.3.2.B. Policies related to pollution

Our Global Environmental Policy contains our ambition to minimize our negative environmental impacts, and risks arising from our own operations and that of our suppliers. We aim to achieve this through our actions on pollution prevention and actions to minimize the impact of certain chemical substances on people and the environment. Through our stakeholder engagement, as described in (Section 3.4.2.3.B. (*Strategy - Interests and views of stakeholders*)) we are informed of the interests of our key stakeholders, whose interests are taken into consideration by ST when setting policies concerning pollution.

Pollution management is an integral part of the Global Environmental Policy. Relevant key elements included in the policy are our commitment (i) to strive for pollution prevention, (ii) to have a pollution and chemicals management system based on standards and best practices and therefore maintaining relevant environmental certifications (namely ISO 14001 certification and EMAS validation) of relevant ST's manufacturing sites and large R&D sites worldwide, including processes for monitoring; and (iii) minimize impact on people and the environment of chemical substances.

To monitor and minimize the potential negative impacts on the environment (caused by existing and/or accidental pollution) resulting from ST's own operation, our Global Environmental Policy includes commitments to implement and maintain control measures, and audits to check that environmental procedures applicable to pollution prevention and chemical use are carried out and to identify and prioritize areas for improvement.

To monitor and minimize the potential negative impacts on the environment (caused by existing and/or accidental pollution) resulting from ST's suppliers' and subcontractors' operations, ST's Global Environmental Policy outlines our commitments to develop long term relationships with ST's suppliers and partners, particularly those with the highest environmental standards and practices.

Furthermore, ST's Global Water Policy details our ambition to manage water-related impacts, including impacts of water pollution, across ST's operations and across the operations of its major subcontractors. The policy is available on [st.com](#), for everybody, including to potentially affected stakeholders and stakeholders who need to help implement it. Further details of this policy are included in *Section 3.4.3.3.B. (Water - Policies related to water)*.

In connection with our ambition regarding pollution management and chemicals use as referenced in the Global Environmental Policy, we have several procedures relating to the mitigation of negative impacts related to pollution of air, water and soil. Those procedures, applicable to all ST manufacturing sites and to selected non-manufacturing sites, are imposed to:

- be compliant with relevant legal requirements at local level, employees' health and safety, adequate protection and reduced emissions to the environment, whatever chemical substances and gases are used onsite;
- control the concentration and/or quantity of pollutants in its air emissions, industrial wastewater emissions and to seek to prevent accidental discharges to soil and groundwater so that it is maintained below the limits laid down in applicable laws and regulations, or in the permits or authorizations.

Substances of concern and very high concern

ST's approach to chemical use, as referenced in the Global Environmental Policy, is to substitute and minimize the use of hazardous materials (substances of concern and very high concern) and heavy metals where feasible, and to phase out certain substances of very high concern where our inability to substitute represents a material risk for the Company. Therefore, ST has set operational procedures applicable to relevant ST manufacturing sites and to selected non-manufacturing sites, including procedures addressing:

- The optimization of chemical products consumption;
- A list of chemical substances that are legally banned, regulated, exempted and declarable.

As per our policy and relevant operational procedures, we apply a hierarchy of safety controls approach to our chemical management procedure. When specific chemicals or materials cannot be eliminated or substituted with less hazardous alternatives, we implement engineering measures and administrative controls to reduce workers' and environmental exposure.

Avoiding incidents and emergency situations

In line with our commitments included in our Global Environmental Policy to maintain relevant environmental certifications for relevant manufacturing and large R&D sites and to comply with environmental regulations globally and locally, we have certain procedures to manage, prevent and reduce the risk of incidents and emergency situations occurring as much as possible. These procedures, applicable to ST manufacturing sites and to selected non-manufacturing sites, require these sites to:

- take certain precautions aimed at prevention of accidental out-of-compliance air and wastewater emissions (emissions amounts emitted above limits laid down in laws and regulations, or in the relevant permits or authorizations), thus reducing negative impacts;
- implement prevention and monitoring measures for equipment that could potentially contaminate soil;
- prepare and update a Spill Control Plan, if required by law;
- apply the precautionary principle (as set out in Principle 15 of the Rio Declaration);

- apply a resilience management framework including crisis-related elements and business continuity-related elements to withstand events/ shocks / crises, and to re-cover as fast and strongly as possible.

Additionally, the Global Environmental Policy includes our dedication to provide appropriate training to all relevant employees, such as fire trainings, chemical risk trainings or environmental trainings, and to provide relevant and applicable information to our stakeholders.

3.4.3.2.C. Actions and resources related to pollution

ST implements various actions aiming at addressing material negative impacts and risks related to pollution. All the following actions are continuous and ongoing to reach the objectives of our related policies and relevant targets, covering the same time horizon as the targets included in Section 3.4.3.2.D. (*Metrics and targets related to pollution*).

We recognize the importance of reducing environmental emissions to minimize the potential pollution effect we could have, and we have made it a priority to do so in the domains of air, water, and waste. Our approach includes treating emissions where possible and implementing replacement programs for hazardous substances throughout our own operations to reduce our environmental impact.

ST has set EHS criteria in operational procedures for the monitoring of chemicals, substances, emissions to air, wastewater, soil and groundwater and waste management. These procedures are applicable to all ST manufacturing sites and to selected non-manufacturing sites depending on the chemical substances the site uses.

ST aims to perform internal corporate EHS audits every three years on all manufacturing sites to check corporate operational procedures are implemented and applied correctly. Based on these audits, sites define local action plans which they report on quarterly.

ST also operates a program of third-party EHS compliance audits at all ST manufacturing sites, and other selected sites.

At each of our manufacturing sites, local sustainability teams and EHS champions are responsible for the following pollution related activities:

- deploying the strategy and the programs onsite;
- supporting site management in defining local targets and KPIs;
- monitoring and reporting performance to corporate;
- sharing best practices; and
- engaging with site stakeholders.

On each manufacturing site, ST has dedicated teams which work on the adequate functioning of and promote improvement ST's air and water treatment systems.

Furthermore, at each of our manufacturing sites, a chemical committee meets regularly to review and evaluate best management practices for identified hazards. The committee uses a comprehensive approach to make decisions on chemical usage. This includes evaluating chemical compositions, hazards, use conditions, engineering controls, medical recommendations, and industrial hygiene requirements. Risk management measures, personal protective equipment, waste management, administrative controls, and training requirements are also considered. By applying this process, we can identify critical substances when they are introduced or reclassified. Modifications to existing processes are also considered and implemented as appropriate.

ST adheres to the RBA Code of Conduct, by setting high standards, conducting thorough audits, providing training, fostering collaboration, emphasizing transparency, and promoting improvement. This approach helps us in our efforts to address the potential impact from pollution generated by our

manufacturing processes and supports the overall goal of sustainable development in the supply chain. The RBA framework covers our upstream supply chain, in addition to the ST manufacturing sites.

Water

ST's water management process prioritizes proven practices of water management to address the potential impact from pollution of water generated by our manufacturing processes. Action plans have been defined at site level with dedicated experts to help implement actions locally. Further details can be found in Section 3.4.3.3.C. (*Water - Actions and resources related to water*).

ST's performance and management systems are evaluated annually through third-party surveillance audits, and we aim to renew our certifications every three years. ST's major manufacturing sites are ISO certified and/or EMAS validated (please refer to Appendix 11.8 and st.com for an overview).

Additionally, using available proven technologies ST maintains the treatment of wastewater discharge in order to minimize the presence of pollutants and substances of concern in its effluents, amongst others, to be compliant with local regulations. More information can be found in Sections 3.4.3.3.C. (*Water - Actions and resources related to water*) and Section 3.4.3.4.C. (*Waste and circular economy - Actions and resources related to waste*).

Air

To further reduce its environmental impact, ST has implemented an air emission abatement program that focuses on reducing emissions of VOCs and covers all ST manufacturing sites. Our air emission abatement program includes the use of advanced technologies and processes to capture and treat air emissions from manufacturing processes, as well as ongoing monitoring to check that installations are working effectively. By reducing VOC emissions and reducing the use of other VOC-emitting materials and chemical products, ST is able to minimize and address its impact on the environment and protect the health and safety of its employees and that of local communities. The program also anticipates compliance with possible future stricter regulation on emissions. These actions are undertaken to, amongst others, reach the VOC reduction target as detailed further in Section 3.4.3.2.D. (*Pollution - Metrics and targets related to pollution*).

Chemicals

ST has a proactive approach to reduce the use of hazardous substances (including some heavy metals), including substances of very high concern in its processes and final products to help safeguard the health and safety of its stakeholders, while reducing its environmental footprint. These actions are undertaken at all our manufacturing sites. An example of such actions is the reduction of the length and complexity of certain manufacturing processes leading to a decrease of chemical consumption.

Moreover, ST implements replacement programs for hazardous substances, including substances of very high concern, throughout its own operations. We search for the best solutions using technology and innovation to replace hazardous materials in our manufacturing processes. We also work with our relevant supply chain actors. These actions are implemented by all ST entities worldwide, that use chemicals and/or purchase any materials containing hazardous substances.

ST strives to eliminate the use of restricted substances in the manufacturing of its products through new designs and reduced dimensions. For example, ST is using ECOPACK which is a grading system to classify environmental compliance of products, as part of its product strategy. This action is implemented in ST's own operations specifically at design and process stages. This supports ST in its efforts to address its potential risk of not being able to substitute hazardous materials in ST processes and products. These actions are implemented to, amongst others, reach our voluntary target to make all

products manufactured within ST's own operations 98% halogen-free by 2035, as further detailed in Section 3.4.3.2.D.1. (*Pollution - Metrics and targets related to pollution*).

Finally, ST requires its suppliers to adhere to the EHS-regulated substances list, which specifies a large number of substances regulated by legislation and which is regularly reviewed. ST also requires its suppliers to confirm their compliance to such list through analytical certificates, safety data sheets, and commitments. This supports ST's efforts to address its potential pollution impacts in its value chain, its potential risk of not being able to substitute hazardous materials in its processes or products, to address customer's changing perceptions and potential stricter regulations on the use of hazardous materials in ST's processes or products. This action is applicable to ST suppliers and subcontractors and by extension all ST sites receiving and purchasing products and materials from these stakeholders are affected.

ST provides material declarations to its customers, which provide insight into the hazardous materials in ST products (each, a "Material Declaration"). In the Material Declaration of our products we report the full material declaration disclosure (based on IPC 1752 format) of the substances included in ST products. For substances of very high concern a specific disclosure is available within the Material Declaration.

3.4.3.2.D. Metrics and targets related to pollution

3.4.3.2.D.1. Targets related to pollution

As per our Global Environmental Policy, we are dedicated to limiting soil, air, and water pollution risks. We do this by, amongst others, implementing state-of-the-art technologies to tackle emissions (in water and air) and by regularly assessing the use and potential substitution of hazardous materials, such as substances of very high concern, to address potential negative impact from our operations on local natural ecosystems caused by, amongst others, air emissions.

Pollution-related target

In 2024 we set a voluntary target to decrease VOC air emissions from ST's fourteen main manufacturing sites, three large R&D sites and one EWS site (as detailed in the table included in Appendix 11.9) to achieve 70% absolute reduction in kg by 2030 vs 2024, building on emissions reductions already achieved in past years.

This target focuses on delivering a reduction of VOC air emissions in absolute kg value in comparison with 2024 levels, taking into account expected production growth.

The baseline value, reported in base year 2024, is 265 tons kg of VOC, covering our main manufacturing sites and major R&D sites as further detailed in Appendix 11.8.

VOC air emissions will be measured by monitoring (periodic measurements) or online monitoring by an accredited laboratory (through automated measuring systems).

By setting this target, ST addresses the prevention and control of air pollutants and substances emission, by reducing air pollutants emitted by ST operations, which subsequently contributes to reducing emissions of substances of concern.

The target has been defined by using 2024 forecasted VOC air emissions and simulating implementation of (new) VOC abatement systems in three specific manufacturing sites, while keeping the existing VOC abatement systems in the other manufacturing sites. New manufacturing facilities will be equipped with VOC abatement systems from the start. This assessment indicates that a reduction of VOC air emissions from ST's own operations of around 70% in 2030 vs 2024 is achievable.

This target is based on scientific evidence regarding the negative impact of VOC emissions on human health and the environment.

Chemicals related target (entity-specific)

With regard to the use of hazardous materials, including substances of concern and very high concern, in our manufacturing processes and products, in 2024 we set a voluntary entity-specific target to make all products manufactured within ST's own operations 98% halogen-free by 2035, alongside our efforts to regularly assess the use and potential substitution of substances of very high concern.

The target, applicable between 2024 and 2035, is relative, expressed in a percentage of the total volume of products manufactured within ST's own operations. The baseline value, is 93% of products manufactured within ST's own operations in 2024 are halogen-free.

For determining the percentage of halogen-free products, the ratio between products which are halogen-free and all products manufactured within ST's own operations is calculated.

To set this target, we examined the likely potential improvement from this baseline until 2035, accounting for products that contain halogenated mold compounds that can be qualified with new materials. The forecast volume of ST manufactured products that contain halogenated mold compounds that we plan to qualify with new materials is 4%. The 98% target was set accordingly.

The halogen-free monitoring methodology for this target is based on an ST specific methodology.

By setting this target, ST aims to prevent and control the emissions of pollutants and substances:

- by reducing halogenated materials in products, ST aims to limit halogen emissions to air;
- by reducing halogenated materials in products, ST aims to limit halogenated solid waste production from the manufacturing process and the products' end of life and thus limiting any release to soil; and
- by reducing emissions of substances of concern through the increase of halogen free products.

This target has been set based on scientific evidence that halogenated compounds, which are substances of concern, have a negative impact on the environment and human health.

3.4.3.2.D.2. Metrics

Pollution of air, water and soil (E2-4)

Pollutant emitted to water

In kilogram	December 31, 2024
Pollutant emitted to water	Global amount greater than annual threshold
Chlorides (as total Cl)	2,020,992
Fluorides (as total F)	115,864
Total nitrogen	111,040
Total organic carbon (TOC) (as total C or COD/3)	59,655
Total phosphorous	7,517
Copper and compounds (as Cu)	1,797
Zinc and compounds (as Zn)	285
Nickel and compounds (as Ni)	92
Arsenic and compounds (as As)	61
Cadmium and compounds (as Cd)	51
Lead and compounds (as Pb)	32
Mercury and compounds (as Hg)	3

Pollutant emitted to air

In kilogram	December 31, 2024
Pollutant emitted to air	Global amount greater than annual threshold
Non-methane volatile organic compounds (NMVOC)	142,031
Vinyl chloride	89,082

As of December 31, 2024, ST emitted consolidated amount of water and air pollutants which exceeded the applicable threshold at site level. ST performed an analysis of the relevant pollutants listed in Annex II of the European Pollutant Release and Transfer Register Regulation ("E-PRTR"). ST performed an analysis to identify the number of pollutants locally measured out of the 91 pollutants listed in E-PRTR Annex II. The pollutants measured at site level are driven by local environmental permits.

The amounts were consolidated and included only the emissions from facilities for which the applicable threshold value specified in Annex II of Regulation (EC) No 166/2006 was exceeded.

With regards to soil pollutants, they are not released by any ST manufacturing site according to the E-PRTR definition. E-PRTR defines soil pollutants as substances that are introduced into the soil. In the context of ST's manufacturing processes, there is no significant pathway for these substances to become direct soil pollutants. ST sites adhere to environmental standards and controls, governing the handling, storage, and disposal of chemicals and other materials, and these processes are designed to minimize pollution, including soil pollution.

The monitoring and measurement methods of pollutant related to air or water depend on ST's policies and the environmental regulations in force in the country where the site is located. All relevant sites are subject to local permits. These permits include pollutants to be measured in line with local regulations. It also includes monitoring and control plan identifying the emission points to be monitored, the parameters, the monitoring frequency and the associated analytical methods.

The specific procedures by which external laboratories conduct the analytical measurements are displayed in each lab report. EU Best Available Techniques Reference Documents ("BREF") standards and other standards, where applicable, are required to be taken into consideration by local authorities in listing the parameters to be monitored, the monitoring frequency and the emission thresholds.

The local teams rely on external accredited laboratories to conduct periodical analyses identified by the monitoring plan as defined in ST policies. EHS local teams conduct emissions monitoring campaigns by sending sampling and analysis to external laboratories compliant with local environmental requirements. The frequency of the monitoring campaign depends on the sites or the pollutant. In any case, pollutants are measured at least on an annual basis and sometimes monthly, quarterly or bi-annually depending on local regulations. ST does not use estimates but direct measurement via monitoring systems calibrated by an external party for two manufacturing sites and periodic measurements performed by laboratories for the remaining perimeter.

In addition, spot measures are performed outside the period emissions measurement defined by the monitoring plan. For these measurements, the local teams also rely on external laboratories to perform analyses.

With regards to emissions to water, they relate to wastewater with two main destinations:

- water discharge to sewer
- water discharge to surface water

Sites can release their wastewater to sewer or surface water, depending on the wastewater treatment plant network design implemented onsite. The monitoring can be measured on a daily basis when there is a local wastewater treatment plant.

ST does not generate nor use micro-plastics during production processes. It does not either procure, and does not have microplastics that leave the facilities as emissions, as products, or as part of products or services.

Substances of concern and substances of very high concern (E2-5)

In kilogram	December 31, 2024
Substances of concern generated or used during the production or that are procured	5,304,215
Substances of concern that leave the facilities as emissions, as products, or as part of products or services	4,127,864
Substances of very high concern generated or used during the production or that are procured	25,756
Substances of very high concern that leave the facilities as emissions, as products, or as part of products or services	36,463

ST disclosed above the amount of substances of concern ("SOCs") and substances of very high concern ("SVHCs") using the following approach of computation:

- amount of substances procured;
- amount of substances leaving facilities as part of products; and
- amount of substances leaving facilities as emissions.

The list of SOCs comes from the ATP 18 Table of the Regulation (EC) No 1272/2008 on the classification, labelling and packaging of substances and mixtures (CLP Regulation), as published by the European Chemicals Agency ("ECHA").

SVHCs are substances that meet the criteria laid down in Article 57 of Regulation (EC) No 1907/2006 ("REACH"). The list of substances was identified in accordance with Article 59(1) of that regulation, and as published by the ECHA.

SOC and SVHC are contained in materials procured by ST (raw materials, chemicals, packing and handling). When going through ST's operations, these procured materials are either used as-is or are involved in reaction processes consuming and/ or transforming and/or releasing SOCs and SVHCs as such. After going through ST's operations (manufacturing, reaction process, packing, etc.), these SOCs and SVHCs end up in the final product and/or in emissions (air, water) and/or in waste. ST does not manufacture new SOCs and SVHCs.

ST is not disclosing the amounts split into main hazard classes of SOCs due to limited guidance from the ESRS or ECHA or other external recognized bodies. Notably as of today, certain substances can be part of several hazard classes and there are no clear rules nor guidance from EFRAG on how to treat these cases. ST is currently discussing this element within ESIA and the European Commission may release a different proposal in the future, notably with an aggregation of hazard linked to environment only versus hazards linked to health and safety. In addition, substances might be assigned to other classes than the current ones. ST will provide this split upon clarification of this matter and additional guidance.

3.4.3.3. Water (E3)

ST's general water management approach/commitments / processes

Addressing the challenges of water scarcity and wastewater treatment across our operations is part of our strategy. Population growth and climate change make it increasingly important to protect this shared natural resource. Our water management approach includes water stress assessments, conservation programs, water efficiency, and wastewater treatment. We strive to implement solutions to reduce water extraction and consumption and we work closely with various stakeholders in the local communities where we operate and otherwise.

Water related IROs (SBM-3)

The following table lists the IROs related to water we have identified and assessed as material in our 2024 DMA, including the programs or dedicated actions and (entity-specific) targets, we have in place to address such IROs.

E3 – Water							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ¹ or inherent ² basis	ST response	Targets
Risk of increased water shortage for ST due to climate change-induced conditions / events, or due to decision from public authorities (imposing planned or unplanned restrictions or rationing) or restrictions on water discharge (e.g. temperature after treatment), leading to business disruption or interruption	Risk	Potential	Own operations	Mid term	Residual basis	ST's water program	<p>We aim to have an annual water recycling rate of at least 60% by 2035 through implementing innovative programs (entity-specific).</p> <p>We aim to annually save water reaching 6 million cubic meters of water saved by 2035 vs 2024 (entity-specific).</p>
Risk of increased water shortage for subcontractors due to climate change-induced conditions / events, or due to decision from public authorities (imposing planned or unplanned restrictions or rationing) or restrictions on water discharge (e.g. temperature after treatment), leading to business disruption or interruption	Risk	Potential	Downstream	Mid term	Residual basis	ST's responsible supply chain program	No target in place

(1) "Residual" refers to the materiality assessment that takes into account existing mitigation measures.

(2) "Inherent" refers to the materiality assessment without taking into account any existing mitigation measures.

3.4.3.3.A. Processes to identify and assess material water-related impacts, risks and opportunities

The water study performed in 2021 by an expert third-party, and the Climate Study, helped us understand the characteristics and impact of water scarcity. In addition to these global analyses, site-specific studies on natural hazards are also conducted where necessary due to local conditions, giving us insights into specific local water-related issues.

The above analyses served as input for our 2024 DMA and considering that the manufacturing of semiconductors is water intensive, we have identified two potential material risks of increased water shortage for our own operations and for those of our subcontractors which carry out the same manufacturing activities as us.

Engagement with affected communities

For our engagement with our affected communities reference is made to Section 3.4.2.3.B. (*Strategy - Interests and views of stakeholders*).

We believe that conducting consultation, including with affected communities, is essential for working towards common goals and addressing water-related challenges. ST sites actively engage with affected communities in various ways and according to their specific needs and the local context. This can include local NGOs, community organizations or town hall events to address community concerns. These engagements, although not standardized across all sites, provide critical insights that inform our decisions and activities aimed at managing our water-related risks.

For example, as part of the expansion of our site in Crolles, France, thorough research was conducted to understand and communicate our impacts in areas such as noise and water. A public consultation was held to present the project, allowing local stakeholders to understand the expansion and to voice any potential concerns. It included web conferences and open meetings with local stakeholders and employees. A dedicated project website was established, allowing stakeholders to ask questions and provide feedback.

3.4.3.3.B. Policies related to water

Our Global Water Policy details our ambitions to manage water-related risks, including risks of water shortages, across own operations and our expectations on water management towards our major subcontractors.

This policy is available on [st.com](#) for everybody, including to potentially affected stakeholders and stakeholders who need to help implement it, and is applied at global level and applicable to all ST entities and all employees. ST's CHRO is accountable for its implementation. Through our stakeholder engagement, as described in Section 3.4.2.3.B. (*Strategy - Interests and views of stakeholders*) we are informed of the interests of our key stakeholders, whose interests are taken into consideration by ST when setting the Global Water Policy.

The policy reflects our approach to managing water within our operations and supply chain. It states ST's ambitions for improved water efficiency and recycling, which relies on the establishment of a water governance and the implementation of monitoring strategies. The Global Water Policy covers the following matters: (i) ST's use and sourcing of water in its own operations and (ii) ST water treatment as a step towards more sustainable sourcing. The policy is based on four key principles:

- commit to water preservation;
- managing water risks and opportunities;
- development of solutions that enable effective water management practices;

- engaging with stakeholders.

The policy states ST's commitments and ambitions for improved water efficiency and recycling, which relies on the establishment of a water governance and the implementation of monitoring strategies.

The various initiatives we are engaged in to address water-related risks, and to achieve enhanced monitoring are detailed throughout the document.

As part of our water management approach, which includes action plans to monitor ST water consumption and increase recycling rates, thus mitigating risk on water shortages in ST operations, we have certifications for ISO 14001 and EMAS validations, as detailed in Appendix 11.8. Our manufacturing site in Shenzhen, China, is AWS platinum certified. ST also takes part in the RBA, whose goal is to engage with suppliers and subcontractors to foster water management best practices, thus, amongst others, mitigating risk on water shortages in ST supply chain. The RBA requires its members to implement a water management program that documents, characterizes, and monitors water sources, use and discharge; seeks opportunities to conserve water; and controls channels of contamination.

ST acknowledges that collaboration, education, and a comprehensive approach are fundamental for the effective management of water.

ST actively participates in industry best practice coalitions, such as the AWS which provides a globally recognized framework to guide water management best-practices on ST manufacturing sites, including engaging with communities. Being a member of the AWS contributes to two main objectives included in the Global Water Policy: managing water risks and opportunities across ST operations and engaging with stakeholders.

ST engages in dialogue with communities located in areas in which we operate to understand their water-related challenges and expectations such as further described in Section 3.4.4.3.D. (*Affected communities - Processes for engaging with affected communities about impacts*).

As mentioned in our Global Water Policy, ST acknowledges that water is a valuable and finite resource that is essential for people, society, communities, biodiversity, and the environment as a whole. ST is committed to managing its water use responsibly and sustainably, minimizing our impact on water resources.

As part of the policy:

- ST uses local water resources and converts a major proportion into ultra-pure water for its manufacturing processes and discharge all of them after treatment and control;
- ST applies strict water governance in all its plants, including water use, discharge, quality, and adherence to applicable laws and regulations;
- ST evaluates water flows and water balance, enhancing water circularity, implementing smart monitoring strategies, seeking water-related innovations, investing to reduce its reliance on freshwater resources, and improving operational resilience. ST follows rigorous procedures for the protection of water, rainwater, soil, and groundwater to preserve the natural environment and minimize any environmental risks;
- ST aims to develop partnerships with customers to innovate on water management, efficiency, recycling, or treatment.

ST's Global Water Policy requires that water-management best practices be applied at all ST manufacturing sites, including the six sites located in high water stress areas, which include R&D sites as well as manufacturing sites.

3.4.3.3.C. Actions and resources related to water

In order to achieve the objectives of the Global Water Policy ST has a water management process in place, which prioritizes best practices of water management and mitigation of risks of water shortages that could lead to business disruption or interruption for own operations and subcontractors. The process includes documentation, characterization and monitoring of water sources, consumption and discharging, seeking opportunities to conserve water, and controlling channels of contamination.

ST's performance and management systems are evaluated annually through third-party surveillance audits, and we aim to renew our certifications every three years. ST's major manufacturing sites are ISO 14001 certified and/or EMAS validated, as detailed in Appendix 11.8. An overview of the certificates and validation is also available on st.com.

This comprehensive approach helps to reduce ST's environmental impact and supports the overall goal of sustainable development in the supply chain. We expect all our suppliers and subcontractors to have business practices and processes aligned with our Code of Conduct, and with these standards and/or with the RBA Code of Conduct. Our largest manufacturing sites, and our suppliers' and subcontractors' sites identified at high risk, are subject to RBA third-party audits.

ST implements actions on all its manufacturing sites to improve water efficiency across its operations. Manufacturing semiconductors requires a large volume of water, and therefore we strive to improve water efficiency across our operations. All the following actions are continuous and ongoing to reach the objectives of related policies and relevant targets.

Action plans have been defined at site level, through dedicated water roadmaps for manufacturing sites, with designated water champions to help implement actions locally. Each site is responsible for creating its own roadmap according to the local context.

Some examples of the actions implemented by ST manufacturing sites to reduce their water consumption include:

- proper monitoring of water consumption, for example through the implementation of smart water metering systems that help spot consumption inefficiencies, detect leaks and water wastage;
- process optimization such as minimizing and standardizing water consumption in manufacturing equipment in idle mode;
- improvement of drain segregation to increase recycling rates;
- recycling water issued from different technical systems including reverse osmosis and ultra filtration systems;
- reuse of recycled water for internal industrial purposes such as cooling towers, scrubbers for air emission treatment, and thermal processing units;
- addition of new wastewater management system to recycle water to produce ultra-pure water (see example below);
- treating our wastewater onsite or in municipal treatment plants before discharging it. Our manufacturing sites are continually improving their treatment of wastewater and the quality of water discharge, which is carefully controlled and monitored online.

ST is engaged in various innovative projects to increase its water recycling rates. For example, at our site in Crolles, France, we started a pilot line to recycle part of the final aqueous discharges from the wastewater treatment plant. This involved launching a project to set up a recycling unit with the aim of producing ultra-pure water. This ultra-pure water can then be used in the manufacture of softened water and ultra-pure water, reducing the use of municipal water for industrial purposes. This process increases the water-recycling rate per hour.

In parallel, we are a member of ESIA, the European arm of the WSC. As part of the WSC, ESIA is playing a leading role in advancing initiatives at the WSC ESH committee, including regarding water

management. Through this unique forum, the global semiconductor industry is working together on collaborative approaches relating to, amongst others, resource conservation.

All ST manufacturing sites, including the ST sites located in areas at water-risk or at high water stress, aim to improve their water management practices through all the actions and certifications detailed above.

Finally, ST encourages its managers and employees to join volunteering initiatives aimed at improving access to safe drinking water for the communities located in the areas where we operate.

3.4.3.3.D. Metrics and targets related to water

3.4.3.3.D.1. Targets related to water (entity-specific)

In 2024 we set a voluntary entity-specific target to achieve an annual water recycling rate of at least 60% by 2035. Additionally, it is our aim to annually save water reaching 6 million cubic meters of water saved by 2035 vs 2024. These entity-specific targets relate to ST's own operation: our fourteen main manufacturing sites and one EWS site, as detailed in the table included in Appendix 11.9.

Although no scientific evidence was used in setting this target, based on the high-water consumption in the manufacturing of semiconductor devices, lowering our water consumption is a continuous focus for ST.

The water recycling target has been calculated starting from 2024 baseline and applying the saving in cubic meter per year anticipated by all existing projects included in our sites' multiple years plan. Simulating the recycling, after implementation of all these projects, the final result obtained was a 60% recycling rate by 2035.

The water recycling rate will be determined accounting for both internal and external recycling. The data is reported annually as a percentage of the overall water use from ST operations.

The water recycling rate is computed as follows: $C+R / W+C+R$, whereby: (i) C = onsite reused and recycled wastewater used; (ii) R = externally reused and recycled wastewater used; and (iii) W= external sources of water used (including rainwater).

The water saving target relates to the absolute volume of water consumption saved annually and has been set by taking into account the list of water saving projects included in sites' multiple years plan, accordingly, a cumulative saving of 6 million cubic meters of water has been estimated. As these projects will start as of 2025, the baseline value is 0 cubic meters of water saved.

In line with our Global Water Policy commitments embedded in our Global Environmental Policy, this target addresses the risk of water shortage and challenges of wastewater treatment by improvement of our water-saving and recycling rates.

The target related to our annual water recycling rate is relative to the total amount of water used annually, expressed as a percentage. The baseline value, reported in base year 2024, is 54% for water recycling (calculated using a new formula which takes into account external recycling).

The water consumption of all targeted manufacturing installations will be followed through meters or flowmeters, reported for online monitoring.

By setting this target, ST addresses the management of material impacts, risks and opportunities related to areas at water risk and those at high water-stress, notably by improving water quality and reducing water consumption, in line with the focus of our Global Water Policy, detailed in Section 3.4.3.3.B. (*Water - Policies related to water*).

ST targets are tools to monitor the effectiveness of the actions, that stem from our ambitions presented in our Global Water Policy. All ST manufacturing sites are working towards reaching these targets, including the sites located in areas at water risk.

3.4.3.3.D.2. Metrics

Water consumption (E3-4)

In cubic meter	December 31, 2024
Total water consumption	5,072,354
Total water consumption in areas at water risk (incl. areas of high-water stress)	1,391,169
Total water recycled	15,927,655
Total water stored	14,124
Changes in water storage	—
Water intensity ratio : total water consumption in its own operations in m3 per million USD net revenue	382

In 2024, the total water consumption of ST amounted to 5,072,354 m³ out of which 1,391,169 m³ in areas at water risk which include areas of high-water stress. The information is collected in our fourteen manufacturing and four main R&D sites. The data is sourced from direct measurements or calculated from measurements notably regarding raw water incoming. In very few cases, the data is estimated for the recycled volume (4% of the total value is estimated) or the discharge water amount (1% of the total value is estimated).

Water consumption

The water consumption represents the amount of water drawn into the boundaries of the undertaking (or facility) and not discharged back to the water environment or a third-party over the course of the reporting period. At ST, the amounts of water drawn into the boundaries are sourced from direct measurement (i.e. meter reading) and water discharge amounts are either sources from direct measurement (upon the existence of a flow meter at site level) or result from a ratio determined at the site level. The ratio used depends on various factors, such as the rate of water evaporation and the irrigation system. Water discharges can come from discharge in surface water or discharge in sewers.

Water consumption in areas at water risks

In 2023, ST mandated an external provider to perform an assessment of water-related risks. The aim was to understand to which water-related risks ST operations are exposed, and what could be the impacts of ST activities on local communities. One of the key indicators used to assess the risks associated with drought episodes was Water Stress per Watershed calculated as the demand over the supply. In addition, the areas of high-water stress were identified using the Aqueduct Water Risk Atlas tool of the World Resources Institute. Areas at water risk and areas of high-water stress have been identified following the definition from the Annex of the CSRD. Six sites, out of which two main R&D sites, are present in areas at water risk.

Water recycled

As of December 31, 2024, total water recycled amount to 15,927,655 m³. Water recycled is defined as water that has been used more than once before being discharged from the undertaking, so that water demand is reduced. The total water recycled is calculated based on the difference between the total of water needs (or used) and the total water withdrawn (from wells or city aqueduct). As such it derives from a combination of direct measurement and the use of a specific ratio as explained for water consumption.

Water stored

As of December 31, 2024, total water stored amount to 14,124 m3. The water volume considered for water storage corresponds to the total amount of water held in water tanks for fire safety purposes. An external body is monitoring these tanks as part of ST property damage and business interruption insurance program. It provides a report including water volumes. If any, the changes in water storage are not significant as mainly due to evaporation or ad-hoc needs during one year.

3.4.3.4 Waste and circular economy (E5)

ST general approach and commitments to waste and circular economy

We strive to reduce waste by minimizing resource consumption, recycling, and implementing circular economy programs.

Generating waste is an inevitable part of our operations. Recognizing this, we have developed a waste management strategy to limit our negative impacts. We focus on the classification, separation, and safe disposal of waste using an approach driven by local regulations and company policy. Our priority is to reduce, prepare for reuse, and recycle and we consider landfill and incineration to be a last resort.

Waste related IROs (SBM-3)

The following table lists the IROs related to waste we have identified and assessed as material in our 2024 DMA, including the programs or dedicated actions and (entity-specific) targets, we have in place to address such IROs.

E5 – Waste and circular economy							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ¹ or inherent ² basis	ST response	Targets
Negative impact on the environment (landfill, waste treatment) resulting from generation of residual ST internal waste	Negative impact	Potential	Own operations	Mid term	Residual basis	ST's waste and circular program	We aim, each year, to reuse, recycle, and recover at least 95% of our waste, and to limit waste disposal to below 5%.
Negative impact on the environment (landfill, waste treatment) resulting from generation of residual suppliers' internal waste	Negative impact	Potential	Upstream	Mid term	Residual basis	ST's responsible supply chain program	No target in place
Negative impact on the environment (landfill, waste treatment) resulting from generation of residual subcontractors' internal waste	Negative impact	Potential	Upstream	Mid term	Residual basis	ST's responsible supply chain program	No target in place
Negative impact on the environment at the end of life of our products due to residual presence of harmful materials	Negative impact	Potential	Own operations	Long term	Inherent basis	ST's chemicals program	No target in place

(1) "Residual" refers to the materiality assessment that takes into account existing mitigation measures.

(2) "Inherent" refers to the materiality assessment without taking into account any existing mitigation measures.

3.4.3.4.A. Processes to identify and assess material waste

We screened our sites and identified material negative impacts on the environment generated by residual internal waste from our own operations and subcontractors' activities due to the nature of related manufacturing processes and limited capacity of recycling infrastructures. For suppliers, we also considered the broad panel of activities they provide us with.

Regarding residual presence of harmful materials in our products, we recognize the importance of this topic and the negative impacts that might be caused on the environment. We have conducted the assessment considering the current state of waste management technology. However, due to the mitigating measures already in place, this negative impact has been assessed as material on a residual basis only.

Engagement with affected communities

For our engagement with our affected communities reference is made to Section 3.4.2.3.B. (*Strategy - Interests and views of stakeholders*). We believe that conducting consultation, including with affected communities, is essential for working towards common goals and addressing waste-related challenges. ST sites actively engage with affected communities in various ways and according to their specific needs and the local context. This can include local NGOs, community organizations or town hall events to address community concerns. These engagements, although not standardized across all sites, provide critical insights that inform our decisions and activities aimed at managing our waste-related impacts and risks.

3.4.3.4.B. Policies related to waste

Our Global Environmental Policy, which is available on st.com for everybody, including to potentially affected stakeholders and stakeholders who need to help implement it, states the company's commitments to limit impacts on the environment, and supports ST response to and management of its potential negative impacts on the environment resulting from generation of residual waste from own operations, suppliers and subcontractors, and the residual presence of harmful materials in the products.

Waste management and introduction of circular economy principles in ST activities are integral parts of our Global Environmental Policy, as highlighted in the following:

- Strive for pollution prevention, reduced consumption of natural resources, reduction of waste, maximized recycling and circular economy, biodiversity protection, minimized impact of chemical substances on people and the environment;
- Incorporate environmental criteria into all stages of product life cycle, from the design phase to procurement, manufacturing, sales, and end of life.

ST's efforts are focused on prioritizing reduction, preparation for reuse, recycling and recovery in the waste hierarchy, and to consider landfilling and incineration as a last resort. This policy therefore aims at addressing the generation of residual waste and landfilled.

To monitor and manage the potential negative impacts on the environment (landfill, waste treatment) resulting from generation of residual waste from own operations, suppliers and subcontractors, and the residual presence of harmful materials in the products, Our Global Environmental Policy states commitments to implement control measures, and audits to check that environmental procedures applicable to waste are carried out and to identify and prioritize areas for improvement, and seek to improve ST's environmental performance.

As referenced in our Global Environmental Policy, we strive to develop long term relationships with our suppliers and subcontractors choosing those with the highest responsible environmental standards and practices, which helps us to address a range of environment issues, including, materially, potential

negative impacts from our residual waste and certain substances at the end of life of our products. This objective notably involves participating in industrial programs.

As mentioned in our Global Environmental Policy, we are committed to maintain relevant environmental certifications for our sites, namely ISO 14001 certification, EMAS validation and RBA standard. Thus, these standards apply to our operational procedures regarding residual waste from own operations, suppliers and subcontractors and our management systems are set up in compliance therewith.

ST employees, suppliers, partners and other stakeholders are important for successful implementation of the policy, and therefore ST seeks to undertake the following:

- provide appropriate training to all our employees and all necessary information to our stakeholders;
- develop long term relationship with our suppliers and partners choosing those with the highest environmental standards and practices;
- promote environmental responsibility among employees; and
- transparently communicate ST's environmental policies, practices, and impact to stakeholders.

3.4.3.4.C. Actions and resources related to waste

We implemented tailored actions related to waste and circular economy to address its negative impacts on the environment arising from its own operations and, where relevant, its suppliers and subcontractors, arising from residual internal waste and residual presence of harmful materials in our products at the end of their life. All actions are continuous and ongoing to reach the objectives and targets set in connection with related policies.

Our waste management process prioritizes recycling over disposal in the manufacturing process to address one of its potential negative impacts by avoiding landfill and incineration. Specific action plans have been defined at site level, comprising actions referenced below, amongst others, to increase the recycling rate. ST's performance and management systems are evaluated annually through third-party surveillance audits, and we aim to renew our certifications every three years. ST's major manufacturing sites are all certified (please refer to Appendix 11.8 and st.com for an overview).

ST addresses negative impact from waste from suppliers' and subcontractors' operations by requiring suppliers and subcontractors to adhere to RBA standards and to implement a systematic approach to identify, label, manage, reduce and responsibly recycle or dispose of waste.

Considering the waste hierarchy, ST implements various actions to reduce and prepare for reuse the waste generation in all its manufacturing sites.

Examples of ST's continuous actions cover:

- optimization of material packing processes;
- improving wastewater treatment processes to reduce waste sludge; or
- reusing certain chemicals from manufacturing processes in wastewater treatment processes.

Considering the waste hierarchy, ST also implements actions to enhance recycling and recovery of waste generated in its manufacturing sites, to address one of its potential negative impacts by reducing and reusing waste generated within its operations. ST strives to increase recycling rates and implement solutions to create value from waste generated by our activities, by converting waste into secondary raw materials that can be used in other industries.

Examples of ST's continuous actions cover:

- traditional recycling for paper, card box, plastics, wood and plastic packaging trays;
- recycling of sludge waste into secondary raw materials and building materials;
- recycling of metals through dismantling of electronic waste;
- recycling of silicons and metals from scrapped devices to limit extraction and transportation of virgin materials;
- use of certain chemical waste for energy recovery; and
- compost of organic waste (limiting food waste allows to reduce waste amounts sent to landfill).

ST is also setting up programs to address end of life management at a global level in our own operations:

- to implement ECOPACK processes and classification to monitor the substances used in our products, and to take action on replacement of certain harmful material where feasible, which in turn facilitates end of life and recycling when our devices are disposed of.
- improve end of life and recycling through the Sustainable Engineering Program. This program aims at including circularity and recycling initiatives, potentially leading to new services provided to customers, or any initiatives increasing levels of recycled materials in products.

ST participates in collaborative R&D projects that aim to integrate end-of-life management constraints into the development and design processes of electronic products to address negative impacts (i.e. EECONE), including the residual presence of harmful materials and dependencies on finite resources.

Based on, amongst others, the RBA Code of Conduct, ST identifies, labels and manages waste, chemicals and other materials posing a hazard to people or the environment to ensure their safe handling, movement, storage, use, recycling or preparation for reuse, and disposal. Hazardous waste data is tracked and documented. Application of the RBA framework is assessed and verified through dedicated RBA audits.

3.4.3.4.D. Metrics and targets related to waste

3.4.3.4.D.1. Targets related to waste

ST has set a voluntary target to prepare for reuse, recycle, and recover at least 95% of our waste, and to limit waste disposal to below 5% per year. No specific scientific evidence was used in setting this target, rather this target was deduced by maintaining the current performance, promoting waste segregation and diversification in manufacturing sites and considering new opportunities of recycling for the remaining waste today at landfill.

In line with our Global Environmental Policy, this target addresses our impact on the environment resulting from generation of residual internal waste by reducing resource consumption, increasing recycling and implementing circular economy programs.

This target is relative to total waste generated per year and is expressed as a percentage. This target relates to ST own operations only: our fourteen main manufacturing sites, three large R&D sites and one EWS site, as detailed in the table included in Appendix 11.9.

Our performance in 2024, was a 97% preparation for reuse, recycling and recovery rate, with a waste disposal rate of 3%.

By setting this target, we address resource outflows and in particular waste management: the target is aimed at reducing the waste generation, maintaining our very high rates of preparation for reuse, recycle and recovery through extending the lifecycle of materials, and aimed at maintaining our performance in limiting the amount of waste disposed in landfills.

This target contributes to UN SDG 12.5 on substantially reducing waste generation through prevention, reduction, recycling and reuse by 2030.

Previously ST had set a target to prepare for reuse, recycle or recover 95% of our waste by 2025 and in 2024 this target was changed to be an annual target, which does not impact comparability with prior disclosures.

ST's prior target to ensure an annual landfill waste rate below 3%, has been updated in 2024. This new target has evolved and now includes both landfilled and incinerated waste without energy recovery and therefore covers all ST waste. As this new target includes bigger waste scope, future results can not directly be compared to prior disclosures.

3.4.3.4.D.2. Metrics

Resource outflows (E5-5)

As per the double materiality assessment, the matter associated with resource outflows which is material for ST relates to the management of waste from our own operations.

Total waste diverted from and directed to disposal

In kilogram	December 31, 2024
Total amount of waste by weight diverted from disposal	74,499,266
Total amount of waste by weight directed to disposal	2,194,100
Total amount of waste generated	76,693,366

As of December 31, 2024, ST generated a total amount of waste of 76,693,366 kg, out of which 74,499,266 kg of waste by weight diverted from disposal and 2,194,100 kg of waste by weight directed to disposal.

Waste, per the ESRS definition is understood as any substance or object which the holder discards or intends or is required to discard.

Total hazardous and non-hazardous waste

In kilogram	December 31, 2024
Total amount of hazardous waste	30,231,630
Total amount of non-hazardous waste	46,461,736
Total amount of waste generated	76,693,366

In this reporting year, ST generated a total amount of waste of 76,693,366 kg, out of which 30,231,630 kg of hazardous waste.

Breakdowns on the hazardous waste directed to or diverted from disposal along with non-hazardous waste directed to or diverted from disposal are presented in tables below.

Hazardous waste follows the standard definition i.e. waste which displays one or more of the hazardous properties listed in Annex III of Directive 2008/98/EC of the European Parliament and of the Council on waste.

Total recyclable and non-recyclable waste

In kilogram	December 31, 2024
Total amount of recyclable waste	61,357,836
Total amount of non-recyclable waste	15,335,530
Total amount of waste generated	76,693,366
<i>Percentage of non-recyclable waste</i>	<i>20%</i>

The total amount of non-recycled waste amounted to 15,335,530 kg representing 20% of the total amount of waste in this reporting year. Non-recycled waste includes waste diverted from disposal due to preparation for reuse and other recovery operations, as well as waste directed to disposal.

The following waste streams are captured in our environmental system: process waste (e.g. acids, chemicals, oil), treatment waste (e.g. filters, grease), toxic and toxic building waste (e.g. asbestos, UV tubes, arsenic contamination items), equipment waste (e.g. tools used in plants), packing and packaging waste (e.g. cardboard boxes, glass container, wood pallets), paper waste (e.g. printout, office form) and other waste (e.g. cafeteria or canteen waste).

Each site is responsible for classifying and segregating its waste according to the classification system used in its national, regional or local laws. It includes determining the level of contaminants in the waste via chemical analysis, and managing each type as a distinct waste stream.

Data is collected monthly. Depending on the type of waste and the site, volumes of waste generated by a site can be either estimated based on history, weighed onsite or weighed on waste treatment plant's site. In the latter case, volumes are communicated to local teams via invoices or receipt slips. In any case, the amount estimated or weighed are being reconciled with invoices. The late reception of certain invoices by external providers, sometimes due to national legislation, result in potential estimated amounts in quarterly reporting. As estimate, the last weighted available amount by an external vendor is used. However, for consolidated reporting year 2024 data, no estimated amount were used as reconciliation with invoices have been performed for all the sites in the perimeter.

The type of treatment of the waste, whether diverted from disposal or directed to disposal, is provided by the external vendor. ST does not generate any radioactive waste.

Breakdown of total amount of waste by weight diverted from disposal by recovery operation types

In kilogram	December 31, 2024
Total amount of hazardous waste by weight diverted from disposal due to preparation for reuse	3,077,146
Total amount of hazardous waste by weight diverted from disposal due to recycling	20,356,882
Total amount of hazardous waste by weight diverted from disposal due to other recovery operations	5,739,058
Total amount of hazardous waste by weight diverted from disposal	29,173,086
Total amount of non-hazardous waste by weight diverted from disposal due to preparation for reuse	561,634
Total amount of non-hazardous waste by weight diverted from disposal due to recycling	41,000,954
Total amount of non-hazardous waste by weight diverted from disposal due to other recovery operations	3,763,592
Total amount of non-hazardous waste by weight diverted from disposal	45,326,180
Total amount of waste by weight diverted from disposal	74,499,266

Out of the total of waste diverted from disposal, 29,173,086 kg relate to hazardous waste and 45,326,180 kg relate to non-hazardous waste. Above table presents the total amount by weight of hazardous waste

and non-hazardous waste diverted from disposal in this reporting year, broken down by different recovery operations: preparation for reuse, recycling and other recovery operations.

Preparing for re-use needs to be understood as checking, cleaning or repairing recovery operations, by which products or components of products that have become waste are prepared so that they can be re-used without any other pre-processing. This definition follows the Directive 2008/98/EC of the European Parliament and of the Council of 19 November 2008 on waste.

The recycling waste amount captures any recovery operation by which waste materials are reprocessed into products, materials or substances whether for the original or other purposes. It does not include energy recovery and the reprocessing into materials that are to be used as fuels.

Other recovery operations represent any operation the principal result of which is waste serving a useful purpose by replacing other materials which would otherwise have been used to fulfil a particular function, or waste being prepared to fulfil that function, in the plant or in the wider economy. At ST, other recovery operations include hazardous waste and non-hazardous waste being burnt. This operation covers thermal treatment of waste with recovery of the combustion heat.

Breakdown of total amount of waste by weight directed to disposal by waste treatment types

In kilogram	December 31, 2024
The amount of hazardous waste by weight directed to disposal by incineration	838,080
The amount of hazardous waste by weight directed to disposal by landfilling	220,464
The amount of hazardous waste by weight directed to disposal by other disposal operations	-
The amount of hazardous waste by weight directed to disposal	1,058,544
The amount of non-hazardous waste by weight directed to disposal by incineration	177,990
The amount of non-hazardous waste by weight directed to disposal by landfilling	957,566
The amount of non-hazardous waste by weight directed to disposal by other disposal operations	-
The amount of non-hazardous waste by weight directed to disposal	1,135,556
Total amount of waste by weight directed to disposal	2,194,100

Out of the total of waste directed to disposal, 1,058,544 kg relate to hazardous and 1,135,556 kg relate to non-hazardous waste. Above table presents the total amount by weight of hazardous waste and non-hazardous waste directed to disposal in this reporting year broken down by waste treatment type such as incineration, landfill and other disposal operations.

Incineration refers to the controlled burning of waste at high temperature without recovery of the combustion heat generated. Landfill relates to a waste disposal site for the deposit of the waste onto or into land.

Waste at ST does not follow any other disposal operations.

3.4.3.5 EU Taxonomy

3.4.3.5.1 The EU Taxonomy Regulation

On July 12, 2020, the EU Taxonomy Regulation entered into force. The EU Taxonomy Regulation establishes the basis for a classification system to determine which economic activities can be considered

environmentally sustainable. The EU Taxonomy Regulation is part of the EU's overall efforts to reach the objectives of the European Green Deal, Europe's strategy towards climate neutrality in 2050. The EU Taxonomy Regulation is designed as a transparency tool to help companies and investors make sustainable investment decisions, with the overall purpose to steer financing towards more sustainable economic activities. Pursuant to the EU Taxonomy Regulation, we are required to disclose information on how and to what extent our activities qualify as environmentally sustainable. The EU Taxonomy Regulation was implemented in phases and is likely to further develop over the coming years. Consequently, disclosure obligations under the EU Taxonomy Regulation will develop over the coming years. This particularly holds true as the EU Taxonomy Regulation is subject to the Omnibus Proposal.

Environmental objectives

The EU Taxonomy Regulation defines overarching conditions which an economic activity must meet to be considered environmentally sustainable and focuses on six environmental objectives, being (i) climate change mitigation, (ii) climate change adaptation, (iii) the sustainable use and protection of water and marine resources, (iv) the transition to a circular economy, (v) pollution prevention and control and (vi) the protection and restoration of biodiversity and ecosystems. For these environmental objectives, several delegated acts have been issued containing technical screening criteria ("Taxonomy technical screening criteria"), which specify environmental performance requirements for the economic activities to be classified as environmentally sustainable ("EU Taxonomy Delegated Acts").

On January 1, 2022, the EU Taxonomy Delegated Act on climate change mitigation and climate change adaptation entered into force. The EU Taxonomy Delegated Acts on the other four environmental objectives entered into force on January 1, 2024, as well as the amended EU Taxonomy Delegated Acts on climate change mitigation and climate change adaptation (the "Climate Delegated Acts").

Eligibility and alignment

From 2022 onwards, as a non-financial undertaking, we have to disclose information on our economic activities which are eligible ("Taxonomy-eligible"), non-eligible ("Taxonomy non-eligible") and aligned ("Taxonomy-aligned") under the EU Taxonomy Regulation.

An economic activity can be considered Taxonomy-eligible when the economic activity is described as such in the relevant EU Taxonomy Delegated Act. To assess whether the relevant economic activity can also be considered Taxonomy-aligned, an additional evaluation must be made to identify if the overarching Taxonomy technical screening criteria are met. Economic activities that are not described in the EU Taxonomy Delegated Acts are considered Taxonomy non-eligible.

3.4.3.5.2. Applicability of the EU Taxonomy Regulation to ST

As a listed company the EU Taxonomy Regulation is applicable to us, and subsequently, we must disclose information on how and to what extent our economic activities are associated with economic activities that qualify as environmentally sustainable under the EU Taxonomy Regulation.

For 2024, the review of our economic activities for Taxonomy-eligibility under the environmental objectives listed in the EU Taxonomy Delegated Acts has not resulted in any change compared to our reporting over 2023. While some of our activities are eligible in relation to climate change mitigation and climate change adaptation, they are not eligible as regards the other four environmental objectives described in the EU Taxonomy Delegated Acts.

For 2024 in relation to climate change mitigation and climate change adaptation, we hereinafter include disclosure of: (i) Taxonomy-eligible and Taxonomy-non-aligned economic activities, and (ii) Taxonomy non-eligible economic activities within our turnover, capital expenditure and operating expenditure. In addition for 2024, in relation to the four other environmental objectives, we hereinafter include disclosure

of Taxonomy non-eligible economic activities within our turnover, capital expenditure and operating expenditure.

The following disclosures pursuant to the EU Taxonomy Regulation are based on the most recent interpretations of the EU Taxonomy Regulation as published by the European Commission. Acknowledging that the EU Taxonomy Regulation is still under development and its interpretation and application is evolving, our disclosure approach under the EU Taxonomy Regulation might consequently evolve accordingly.

Environmentally sustainable activities

Under the EU Taxonomy Regulation an economic activity is considered environmentally sustainable (“EU Taxonomy-aligned”) if it meets the following conditions:

- (1) provides a substantial contribution to one of the six above-mentioned environmental objectives;
- (2) does not significantly harm any of the other environmental objectives (i.e. does not support one environmental objective at the expense of progress on another environmental objective) (“DNSH”); and
- (3) complies with internationally recognized minimum safeguards (e.g. OECD Guidelines for Multinational Enterprises, UN Guiding Principles on Business and Human Rights) (“MSS”).

We assessed our economic activities against the EU Taxonomy Regulation classification system in various steps, amongst others: (i) identifying the economic activities relevant for the EU Taxonomy Regulation disclosure, (ii) performing a Taxonomy-eligibility assessment based on the relevant EU Taxonomy Delegated Act, and (iii) assessing Taxonomy-alignment of the economic activities. For the disclosure of Taxonomy-eligibility and Taxonomy-alignment we assessed the proportion of our turnover, capital expenditure and operating expenditure, related to environmentally sustainable activities.

Enabling economic activity

We believe that the semiconductor industry plays a key role as a strategic enabler of a low carbon society as well as to manage the transition towards carbon neutrality. As part of our value proposition, we aim at designing and manufacturing products that are power efficient and support our customers in developing technologies that have low carbon footprint. Low carbon applications such as electric mobility, renewable energies, smart cities, or smart building have been and remain strategic markets for us. We are a market leader in the design and manufacturing of power solutions and motor control enabling products, in which there are ample opportunities for short-term impact on GHG emissions. We are also a market leader in terms of ultra-low power ICs such as sensors or microcontrollers.

While some sectors contribute directly to climate change mitigation and climate change adaptation, we, as an intermediate product manufacturer, enable “the manufacturing of low-carbon technologies”, which activity is also covered by the EU Taxonomy Regulation classification system. Our activities which aim at contributing to climate change mitigation and climate change adaptation, are the manufacturing of electronic components that enable other sustainable economic activities and applications. The relevant EU Taxonomy Delegated Act lists economic activities that may be considered Taxonomy-eligible based on associated so-called NACE codes. For our Taxonomy-eligibility we report on NACE code 26: “Manufacture of computer, electronic and optical products”; and NACE code 26.11: “Manufacture of electronic components”. NACE code 26.11 is considered relevant for the semiconductor market as confirmed in the guidance published on the interpretation of the EU Taxonomy Regulation by the European Commission in October 2022. For financial year 2024, we therefore continue reporting under section 3.6 of the EU Taxonomy Delegated Act on Manufacture of low carbon technologies.

Our EU Taxonomy-eligibility assessment

In our Taxonomy-eligibility assessment we identified all our products, which aim at contributing substantially to climate change mitigation. These products are divided into the following four product categories: (i) products that have a low carbon manufacturing footprint compared to similar products of a previous generation, (ii) products that have low power consumption or low power loss characteristics compared to similar products manufactured by us or others, (iii) products that bring an advantage to run a low GHG emission end application or (iv) products that bring an advantage to improve efficiency of high GHG emitting end applications.

With regard to climate change adaptation, we constantly assess how our products could contribute to climate change adaptation and potentially qualify under the relevant EU Taxonomy criteria. For the year ended December 31, 2024, Capital expenditure related to the implementation of climate change adaptation solutions is not significant.

3.4.3.5.3. Taxonomy-eligible economic activities related to climate change mitigation

Our approach towards application of the EU Taxonomy Regulation for the relevant KPIs: turnover, capital expenditure and operating expenditure for EU Taxonomy reporting purposes is reflected below.

Turnover of Taxonomy-eligible economic activities

In our Taxonomy-eligibility assessment all our product lines have been reviewed. Products falling into one of the four product categories referenced above are considered Taxonomy-eligible and we have included the relevant turnover generated from those products in the Taxonomy turnover calculation.

This assessment resulted in a turnover of Taxonomy-eligible economic activities amounting to 40% of our total revenues reported for the financial year 2024, whereby the denominator is based on our total revenues as reported on the consolidated income statement for the year ended December 31, 2024, while the numerator is based on the total net turnover of our products considered as Taxonomy-eligible. This is constant compared to 40% for the financial year 2023.

Capital expenditure of Taxonomy-eligible economic activities

To determine the Taxonomy-eligible portion of our capital expenditure the following has been taken into account:

- investments in our technologies, which have been directly associated with Taxonomy-eligible product lines based on our capital expenditure plan for each technology;
- individual measures, such as investments for our carbon neutrality program or investments related to energy efficiency of our processes;
- investments related to IP or licenses or capitalized development costs, which have been classified as Taxonomy-eligible based on the relevant product line; and
- lease of buildings and equipment which have been considered as fully or partially Taxonomy-eligible.

For determining the Taxonomy-eligible portion of the capital expenditure, the denominator is determined based on the 2024 additions to property, plants and equipment (including rights of use for leased assets), intangible assets (including capitalized development costs), as reported in Notes 7.6.10, 7.6.11 and 7.6.12 of our consolidated financial statements for the year ended December 31, 2024.

Furthermore, the numerator equals the part of the capital expenditure (including IFRS 16 leases) related to assets or processes that (i) are associated with Taxonomy-eligible economic activities, (ii) are part of a

capital expenditure plan to expand Taxonomy-eligible economic activity, and (iii) are individual measures enabling economic activities to become low-carbon or to lead to GHG reduction.

This results in a capital expenditure of Taxonomy-eligible economic activities amounting to 49% of our total capital expenditure for the financial year 2024, slightly higher than the ratio published for the financial year 2023 (48%). This growth is primarily driven by a more granular and wider coverage of our investments review.

Operating expenditure of Taxonomy-eligible economic activities

For determining the operating expenditure of Taxonomy-eligible economic activities, the denominator is determined based on R&D expenses, as reported in our consolidated income statement for the year ended December 31, 2024, after deducting depreciation and amortization, certain expenses and overheads, which are not directly associated with the development of new products or technologies.

Furthermore, the numerator equals to the part of the operating expenditure included in the denominator that is any of the following: (a) related to assets or processes associated with Taxonomy-eligible economic activities, (b) part of the capital expenditure plan to expand Taxonomy-eligible economic activities. For the numerator, we reviewed each R&D project with the following approach:

- each R&D project linked to a product line classified as Taxonomy-eligible resulted in Taxonomy-eligible operating expenditure; and
- for the remaining R&D projects serving multiple product lines or technologies, we applied relevant allocation keys taking into account, amongst others, the above mentioned Taxonomy-eligible portion of our turnover.

This assessment results in operating expenditure of Taxonomy-eligible economic activities amounting to 48% of our total operating expenditure for the financial year 2024, slightly higher than the ratio published for the financial year 2023 (47%). This growth is primarily driven by the ratio applied based on product line eligibility.

3.4.3.5.4. Taxonomy-aligned activities related to climate change mitigation

For financial year 2024, ST is not in a position of being compliant with substantial contribution criteria and is reporting consequently 0% in terms of alignment for the three KPIs.

As mentioned above, Taxonomy-alignment implies that the economic activities comply with the following three conditions:

- providing a substantial contribution to one of the six environmental objectives;
- complying with the DNSH criteria; and
- complying with the minimum safeguards criteria.

As we report within the 3.6 Manufacture of other low carbon technologies, ST must comply with the following principles of the Taxonomy technical screening criteria:

- the economic activity manufactures technologies that are aimed at and demonstrate substantial life cycle GHG emission savings compared to the best performing alternative technology/product/solution available on the market;
- life-cycle GHG emission savings are calculated using Commission Recommendation 2013/179/EU(100) or, alternatively, ISO 14067:2018(101) or ISO 14064-1:2018(102);
- quantified life-cycle GHG emission savings are verified by an independent third-party.

While ST has managed to certify its LCA methodology according to ISO 14067:2018 Annex C - CFP Systematic Approach for Design and Manufacturing of semiconductor products on our manufacturing

sites, the other elements of compliance cannot be met. As the European Commission has not published a dedicated semiconductor economic activity within the EU Taxonomy regulation and no additional guidance was provided on the economic activity 3.6, the assumptions taken in previous reporting year cannot be considered anymore. This also applies to the approach taken on other elements regarding the DNSH requirements.

ST is not restating previous year alignment results considering they were computed based on available knowledge at this time and in line with the below Future developments paragraph.

ST understands that the European Commission has adopted a package of proposals to simplify EU rules and has published a draft Delegated act amending the Taxonomy Disclosures Delegated Act, as well as the Taxonomy Climate and Environmental Delegated Acts which is open for feedback at the time of the writing of the report. ST will carefully monitor any future developments, and we expect that our reporting will continue to evolve over time.

3.4.3.5.5. Future developments

There is still currently limited guidance published on the interpretation of various elements of the EU Taxonomy Regulation. While we have carefully balanced our assessment and disclosures on the EU Taxonomy Regulation, taking into account the latest publications, this reporting may still differ from future disclosures as more guidance becomes available over time.

In the coming years, we will continue to report under the EU Taxonomy Regulation regarding our Taxonomy-eligible and our Taxonomy-aligned economic activities. This entails a further and continuous review of our products, do no significant harm procedures and minimum safeguards assessment. Future guidance on the EU Taxonomy Regulation could result in updated definitions and other decision-making in meeting reporting obligations that may come into force notably related to the DNSH pollution prevention and control criteria or the definition of the operating expenditure. We expect that our reporting will evolve over time as more insights will be gained on how best to comply with the EU Taxonomy Regulation.

3.4.3.5.6. EU Taxonomy reporting tables

Turnover

No
3	The undertaking carries out, funds or has exposures to safe operation of existing nuclear installations that produce electricity or process heat, including for the purposes of district heating or industrial processes such as hydrogen production from nuclear energy, as well as their safety upgrades.	No
	Fossil gas related activities	
4	The undertaking carries out, funds or has exposures to construction or operation of electricity generation facilities that produce electricity using fossil gaseous fuels.	No
5	The undertaking carries out, funds or has exposures to construction, refurbishment, and operation of combined heat/cool and power generation facilities using fossil gaseous fuels.	No
6	The undertaking carries out, funds or has exposures to construction, refurbishment, and operation of heat generation facilities that produce heat/cool using fossil gaseous fuels	No

3.4.4. Social

Approach

We are committed to managing our business operations in a socially responsible way.

We provide semiconductor solutions that play an important role in helping to address environmental and social challenges. As an IDM, we handle most manufacturing in-house and also outsource part of the manufacturing to our subcontractors. The manufacture of semiconductor devices requires natural resources, use of chemicals, and is labor-intense. Our strategy and business model take into account the material impacts we may have on our own workforce, our supply chain workers and our affected communities.

Preventing negative impact on people is a priority for ST. For our own workforce this is demonstrated through our human rights program, our high health and safety standards, our compliance framework for i.e. data privacy, our efforts to create an inclusive workplace and our continuous employee training activities. Through the RBA Code of Conduct, which we adopted as our supplier code of conduct, we expect our suppliers to respect the human and labor rights of workers of the supply chain, which we track through RBA audits. We engage with our local communities in the areas in which our sites are located on our material impact which is demonstrated through our certificates, such as AWS.

Policies

Our approach to social responsibility is laid out in our Corporate Social Responsibility Policy and Corporate Labor and Human Rights Procedure. These policies, which reflect RBA's Code of Conduct, focus on:

- prohibition of all forms of forced labor, child labor, including bonded, trafficked or slave labor, discrimination and harassment;
- implementation of a fair organization of working time, wages, benefits, working conditions;
- fair treatment, anti-harassment and non-discrimination;
- respect for freedom of association and privacy of personal information;
- enhancement of employee well-being and safety.

Regarding health and safety of our workforce, our Corporate Occupational Health and Safety Policy ("Corporate OH&S Policy") outlines the main principles to establish, implement, maintain and improve our OH&S management system.

In relation to handling personal data, we have put in place a set of policies which constitute the framework for our processing and protection of personal data across all entities.

Our Supply Chain Responsibility Standard Operating Procedure establishes a framework for managing social and environmental due diligence in ST's supply chain. ST's Policy Statement on Conflict Minerals and Responsible Minerals Sourcing and the Conflict Minerals Management and Responsible Mineral Sourcing Standard Operating Procedure contains ST's statement on managing the issue of conflict minerals and responsible sourcing.

These policies and procedures are applied at global level and applicable to all ST entities and all ST employees. For an overview of the relevant key elements of these policies, please refer to the policy overview table in Appendix 11.7.

Availability of policies

Our policies and procedures are available on st.com or relevant internal platforms, as further described in Appendix 11.7.

Governance

Please refer to Appendix 11.7 for an overview of the function responsible for implementation of the policies.

ST management system

We implement a labor and human rights due diligence process which consists of regular risk assessments, complemented by regular internal and external audits.

Relevant ST sites are ISO 45001 certified as further detailed in Appendix 11.8. ISO 45001 is an international standard for an occupational health and safety management system.

Stakeholder engagement

We aim to maintain open communication and actively listen to our own workforce, workers in our supply chain and affected communities. Therefore we regularly engage with them to understand their interests and views to be able to integrate their feedback into our decision-making as appropriate. At the end of 2024, we developed a structured stakeholder engagement approach, including engagement with affected communities, which is currently being deployed across relevant ST departments and sites.

3.4.4.1 Own workforce (S1)

Own workforce related IROs (SBM-3)

The following table lists the IROs related to own workforce we have identified and assessed as material in our 2024 DMA, including the programs or dedicated actions and (entity-specific) targets, we have in place to address such IROs.

S1 – Own workforce							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ¹ or inherent ² basis	ST response	Targets
Negative impact on own workforce due to difficulties in securing labor rights (e.g., excessive working hours, adequate wages) and human rights (incl. all forms of forced / bonded labor, child labor, student workers, inadequate housing)	Negative impact	Potential	Own operations	Short term	Residual basis	ST's labor and human rights program	We aim to achieve RBA platinum recognition for all majority-owned main manufacturing sites by 2030 (entity-specific).
Negative impact on own workforce due to leakage of sensitive personal information related to employees, either from ST or duly contracted third parties, leading to harmful consequences for individuals concerned (e.g., harassment, fraud, blackmail, identity theft, etc.)	Negative impact	Potential	Own operations	Long term	Inherent basis	ST's data privacy program	No target in place
Risk of human rights violation (incl. all forms of forced / bonded labor, child labor and student workers consideration, inadequate housing) for our own workforce leading to allegation, litigation, fines or penalties as well as affecting ST social objectives, commitments and reputation	Risk	Potential	Own operations	Long term	Inherent basis	ST's labor and human rights program	We aim to achieve RBA platinum recognition for all majority-owned main manufacturing sites by 2030 (entity-specific).

S1 – Own workforce							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ¹ or inherent ² basis	ST response	Targets
Negative impact on our workforce due to occupational injuries, illnesses (e.g., related to hazardous chemicals or repetitive strain injuries), mental health issues, exhaustion, poor well-being in the workplace or other consequences	Negative impact	Potential	Own operations	Long term	Inherent basis	ST's safety firST program	We aim, each year, to achieve a Total Recordable Case rate of 0.75 or less for work-related injuries and illnesses, including onsite value chain workers (entity-specific).
Negative impact on own workforce and their careers (unequal pay or chances of progression) due to discrimination, harassment in our workplace	Negative impact	Potential	Own operations	Long term	Inherent basis	ST's equal treatment program	We aim to maintain an adjusted gender pay gap below 5% at company level each year (entity-specific). We aim for the representation of women in management and Senior Management roles to be at least 25% by 2035 (entity-specific).

(1) "Residual" refers to the materiality assessment that takes into account existing mitigation measures.

(2) "Inherent" refers to the materiality assessment without taking into account any existing mitigation measures

3.4.4.1.A. Engagement with own workforce

As described in Section 3.4.2.3.B. (*Strategy - Interests and views of stakeholders*) above, our own workforce is considered one of our key stakeholders, whose perspectives are taken into account when defining our material topics and IROs and as such influences our strategy.

3.4.4.1.B. Material impacts, risks and opportunities and their interaction with strategy and business model (ESRS 2 SBM-3)

All employees and non-employees within our own workforce could be subject to the material negative impacts as assessed in the 2024 DMA. The various types of employees and non-employees included in our own workforce are listed in the various tables, and related explanatory disclosure, in Section 3.4.4.1.G.2. (*Own Workforce - Overview by category of employee (permanent vs temporary) and gender and Characteristics of non-employee workers in the undertaking's own workforce*).

The material negative impacts on our own workforce as assessed in the 2024 DMA are mostly related to our business model as an IDM with many employees and manufacturing sites worldwide, including in Asia.

The material negative impacts on our own workforce as assessed in the 2024 DMA, relate to:

- labor and human rights violations: we recognize that should those violations happen the magnitude of impact would be severe, however there is a low likelihood of occurrence due to the mitigating measures in place. Nevertheless, we have concluded on the materiality of this negative impact based on ESRS 1 provision which states that for potential negative human rights impacts, the severity of the impact takes precedence over its likelihood;
- data protection of personal data is a widespread subject at ST and might affect all ST geographies. ST has established a personal data protection program and developed control objectives. Based on this program this negative impact has been assessed as material on an inherent basis only, while we have concluded on its non-materiality on a residual basis;
- health and safety: we recognize the importance of our own workforce health and safety, with the inherent risk factor depending on the type of manufacturing but also depending on local legislation. Due to the mitigating measures in place it has been assessed as material on an inherent basis only; and
- potential challenges related to equal treatment of employees. However, this might be influenced by local context. We have various mitigating measures in place, therefore this impact has been assessed material on an inherent basis only.

Regarding the risk of human rights violations, the related assessment has been mainly focused on forced labor, especially bonded labor, while child labor is less likely in our industry:

- the risk of forced and compulsory labor is mainly relevant for our manufacturing sites in Asia, where it can be considered widespread in the manufacturing industry, a labor-intensive sector, and namely in our back-end manufacturing sites. However, we have various effective mitigation measures in place, therefore this risk has been considered material on an inherent basis only; and
- the risk of child labor in our industry is less likely, due to the complexity of our manufacturing process and equipment used in our manufacturing process. In the semiconductor industry in general, child labor is a lower risk.

In the 2024 DMA we considered the types of people that could be negatively affected and no specific focus was laid on certain specific types of people.

In the 2024 DMA only one risk was identified with regard to our own workforce and this risk has not been considered to arise from dependencies on people in our own workforce. It has been considered to arise from the potential negative impact that we might have on our own workforce regarding labor rights.

3.4.4.1.C. Policies related to own workforce

Labor and Human Rights

We aim to uphold the highest standards of labor and human rights, placing it at the core of our strategy and culture. We manage this by developing and implementing due diligence programs to identify, prevent, mitigate, and remediate actual and potential adverse impacts on our workforce and risks to our business.

Our due diligence program for our own operations is based on the following elements:

- embedding responsible business conducts into policies;
- identifying and assessing adverse impacts (including through audit programs and engagement with own workforce through various channels described in more detail in Section 3.4.4.1.D. (*Own workforce - Processes for engaging with own workforce and workers' representatives about impacts*));
- ceasing, preventing, and mitigating adverse impacts by identifying the root causes and implementing corrective measures and providing remediation, as appropriate; and
- tracking implementation and results.

Embedding responsible business conducts into policies

ST is dedicated to responsible business conduct, in line with our Code of Conduct and related policies and procedures such as our Corporate Social Responsibility Policy and our Corporate Labor and Human Rights Procedure. Our policies are informed by relevant internationally recognized standards, including the UN Guiding Principles on Business, and Human Rights, the OECD Guidelines for Multinational Enterprises, and the ILO Declaration on Fundamental Principles and Rights at Work. Additionally, we have also embedded in our policies the RBA Code of Conduct, which is an industry standard and which covers our material matters. Our policies related to labor and human rights set out our aim that all employees and workers are treated with respect and dignity and that secure labor and human rights conditions are provided.

The implementation of the Corporate Social Responsibility Policy and Corporate Labor and Human Rights Procedure, which apply to all ST entities and all ST employees, is overseen by our CHRO and they are available at st.com and our intranet, for everybody, including to potentially affected stakeholders and stakeholders who need to help implement it.

Our policies focus on:

- prohibition of all forms of forced labor, child labor, including bonded, trafficked or slave labor, discrimination and harassment;
- implementation of a fair organization of working time, wages, benefits, working conditions;
- respect for freedom of association and privacy of personal information; and
- enhancement of employee well-being and safety.

Health and Safety

Our approach and policies

We promote a culture of health, safety and well-being for our employees and subcontractors. We have a proactive approach towards occupational health and safety ("OH&S"), as prevention and anticipation are

key. Our Corporate Occupational Health and Safety Policy ("Corporate OH&S Policy") outlines the main principles to establish, implement, maintain and improve our OH&S management system, which supports ST's response to potential negative impacts on our workforce.

This policy is applicable to all ST employees, departments, products, sites, and activities worldwide, as well as to onsite value chain workers or individuals under ST's supervision. The implementation of the policy is overseen by our CHRO and it is available on st.com and so is available to potentially affected stakeholders and stakeholders who need to help implement it.

Health and safety is a priority for us, to manage potential negative impacts on our workforce. Safety is an ST value that must never be compromised. We endeavor to provide a safe and healthy workplace for our workforce in all our sites worldwide, to prevent work-related occupational injuries and illnesses. We believe it is essential to invest in healthcare and the well-being of our workforce for a positive and productive working environment. These values are shared and reinforced across all our sites.

Safety is the result of our management system and attitudes. We have developed an OH&S management system throughout our Company, and promote this to build a culture conducive to the prevention of occupational risks, based on the leadership of our management. In leading by example and demonstrating visible engagement and involvement with the OH&S management system, our management actively promotes such culture. Regular training of our employees raises levels of health and safety awareness, supporting them to perform their job safely, and enhances prevention. Recognizing and promoting the safest behaviors and encouraging shared vigilance and responsibility for taking care of each person's own and other's safety further strengthens our 'Safety First' culture.

We strive to meet and exceed relevant OH&S local and international legal requirements at all our sites. Our main manufacturing sites and largest non-manufacturing sites are ISO 45001 certified which provides alignment and a framework for OH&S management which covers workplace accident prevention. Our current certifications are included in Appendix 11.8 and can be found on st.com.

We promote a healthy lifestyle and have set up employee health and well-being programs such as for psychosocial risk prevention and assistance.

Equal treatment and opportunities for all

Our approach and policies

We believe that equal treatment of our employees has a positive impact on innovation and stakeholder engagement as well as personal and Company growth.

We endeavour to foster a diverse and inclusive workplace and to not tolerate discrimination. We aim to recruit and retain a diverse workforce, reflecting society. We aim for equity in career development, career opportunities, and equal remuneration. We seek to build an inclusive culture that values our employees and interested stakeholders and addresses bias and stereotypes. We aim to maintain a culture free of discrimination and harassment where individuals are treated with respect and dignity. Our policies include prohibition of discrimination on the grounds of race, color, ethnic or social background, national origin, age, gender, physical characteristics, disability, political opinion or affiliation, religion, gender identity or expression, sexual orientation, marital or maternity status, union affiliation or any other non-job related personal characteristic.

These ambitions and company values are outlined in ST's Code of Conduct, Corporate Social Responsibility Policy and Corporate Labor and Human Rights Procedure, and apply to all employees in order to manage potential negative impacts such as unequal pay or chances of progression. These policies are available at st.com and our intranet, for everybody, including to potentially affected stakeholders and stakeholders who need to help implement it. The implementation and monitoring of the Corporate Social Responsibility Policy and connected operational procedures is executed through our management systems and is overseen by our CHRO. Our policy on equal treatment is implemented through equal treatment strategy and programs.

Data privacy

Our approach and policies

Data privacy encompasses the broader framework of rights and regulations that govern how personal data should be handled and protected.

As an employer, our obligations under personal data protection laws and regulations are to safeguard the protection of employees' personal data and the lawful processing of their personal data. These obligations are structured around four main principles: obligation to inform, purpose limitation and data minimization, and data security measures.

To this end and based on the GDPR framework, we have established a personal data protection compliance program, which includes policies and procedure guidelines. Furthermore, we have developed privacy control objectives making usage of the following 'best practice' frameworks:

- generally accepted privacy principles - issued by the American Institute Certified Public Accountants and Canadian Institute of Chartered Accountants;
- National Institute of Standards and Technology ("NIST") SP800-R53 privacy control catalog;
- ISO/IEC 27701:2019.

We process personal data of workers globally and our commitment to protecting their personal data is anchored in our Code of Conduct. This code establishes basic rules for responsible data handling for all employees and provides guidance and references to other applicable policies.

We have put in place a set of policies which constitute the framework for our handling and protection of personal data across all entities globally. These policies contain several provisions on our processing of personal data, including but not limited to rules on processing personal data, transparency, the rights of the data subjects, handling of complaints and personal data breaches, transfer of personal data to third parties, as well as supervision and compliance.

The head of our Corporate Compliance, Ethics and Privacy Department is accountable for the implementation of relevant policies and operational procedures, while the relevant regional heads of Human Resources are accountable for compliance with such policies and operational procedures.

Engagement in policy setting

When setting policies concerning ST's own workforce, their interests are considered in the sense that the objective of these policies is to maintain a culture free of discrimination and harassment, where individuals are treated with respect and dignity, to provide a safe and healthy workplace, in which their legal rights and interests are respected. Amongst others, through our stakeholder engagement with regard to our own workforce as described in Section 3.4.2.3.B. (*Strategy - Interests and views of stakeholders*) we are informed of their interests.

3.4.4.1.D. Processes for engaging with own workforce and workers' representatives about impacts

As our own workforce is at the heart of our success, listening to their feedback and input is essential to evaluate progress towards our transformation and growth.

With reference to the general stakeholder engagement process we have in place, as described in Section 3.4.2.3.B. (*Strategy - Interests and views of stakeholders*), in this paragraph, we provide further details on the processes we have in place to specifically engage with the people in our own workforce as well as workers' representatives, as relevant. Our engagement with our own workforce and workers'

representatives involves topics, such as, but not limited to, working conditions, labor and human rights, privacy, health and safety, wages and benefits, equal treatment and opportunities, and sustainability.

We engage with the people in our own workforce and workers' representatives via various channels and various levels within ST.

While the majority of the below mentioned channels are implemented at local level and might slightly differ, we are working on adopting and implementing more avenue(s) to harmonize workers and workers' representatives' engagement at global level, leveraging on these local initiatives.

Engagement with employees in our own workforce and workers' representatives falls under the oversight of our CHRO.

Employee survey – global engagement

At a corporate level, the main engagement channel is our global employee survey, which we aim to be held at least every two years, which is a critical source of information enabling us to identify opportunities to better understand and meet the needs of our evolving workforce.

An action planning process across regions and functions is in place through which we analyze the feedback received from our workforce which allows us to assess what actions would be an appropriate response to this feedback.

As part of this process our departments and managers select the most salient feedback to engage actions based on the results of the survey. More specifically, (1) the results are discussed within the various teams, including a comparison with the overall company results; (2) feedback and action planning sessions are organized with the employees; (3) the employees are debriefed about their feedback and actions plans, as relevant; and (4) action plans are deployed under regular monitoring of efforts and results. In each global survey cycle the questions are reviewed and compared with the former cycle to review relevance and assess progress made.

In order to gain insights into the perspectives of specific groups within our workforce, such as women, ethnic, cultural or religious minorities, members of the LGBTQIA+ community, people with disabilities and care givers, the equal treatment index in our global employee survey covers different dimensions of equal treatment, such as discrimination, inclusion, and belonging.

In addition to the bi-annual global employee survey, specific topical surveys are also sent out to employees bi-annually to gather their insights and thoughts on particular topics.

Local engagement with own workforce

Various ST sites have implemented several tools and channels to engage with workers about actual and potential impacts and the management thereof, such as:

- suggestion systems where employees can share improvement suggestions on relevant topics. These improvement suggestions are regularly reviewed by committees comprised of, amongst others, topical experts, human resources, sustainability champions and managers. The implementation of a suggestion relies on various criteria, including criticality and feasibility. The employees can follow the status of the assessment of their suggestions on the platform. Suggestions that are implemented are communicated to the employees through local communications; or
- onsite in-person events held at sites to facilitate management to engage directly with employees. These events, at times focusing on a specific topic, such as RBA day or sustainability week, allow employees to raise questions and to provide feedback related to their working environment and conditions, or otherwise, directly to management and receive an immediate first personal response.

Engagement with vulnerable or marginalized people in our workforce

We strive to understand and address the perspectives of our workforce, particularly those who may be vulnerable or marginalized. Our Corporate Labor and Human Rights Procedure requires ST sites to provide a work environment adapted to the needs of workers with disabilities and/or medical conditions. Assessments involve discussions with affected individuals and their feedback is taken into consideration to determine if any changes to the working environment are needed. These actions are site-specific, amongst others, taking into account local legal obligations and the specific circumstances of the case.

We have a specific process in place to address the needs of foreign migrant workers as outlined in our Corporate Labor and Human Rights Procedure. At sites where such migrant workers work, we engage with these workers during the pre-departure stage by providing customized training on ST, their position and environment of the receiving countries. Shortly after their arrival, surveys are conducted to understand their experiences within ST. If any issues are identified that do not align with our company values and policies, corrective measures are promptly implemented and documented. Communications with foreign migrant workers are in their native languages or at a minimum in a language these workers understand if native language communication is not available. Communications include slides, posters, email, onsite posting on screen, and handbooks.

We have established Employee Resource Groups ("ERGs") to promote inclusion in the workplace. These are voluntary, employee-led groups of people belonging to a minority or having a shared characteristic, and their allies. The aim of the ERGs is to provide a safe space for members to share their experiences and challenges, helping leaders understand what matters to these employees, and to support their professional development. Our women's ERG, WISE, and our ERG for the younger generation, Blossom, aim to provide global collaborative communities that foster personal and professional development. STAND, our ERG for LGBTQIA+ employees, aims to promote and advocate for a safe environment where colleagues feel seen heard and valued inside and outside of ST. In 2024 we launched ABLE, an ERG for people with disabilities ("PWD").

Engagement with workers representatives

Many of our sites also regularly engage with workers' representatives, at least quarterly. ST's Human Resources Department, the general manager and sustainability champions as appropriate, hold meetings with workers' representatives to shed light on situations shared by workers to their representatives and/or representatives as workers. Reports/minutes are issued following the meetings and the salient points are communicated to the local workers through workers' representatives' communications. Follow-up and advancements are shared in each quarterly meeting.

3.4.4.1.E. Processes to remediate negative impacts and channels for own workforce to raise concerns

Where we have caused or contributed to a material negative impact on people in our own workforce, we take corrective actions and provide remedy as relevant.

Such corrective actions are based on (i) corrective action plans that we put in place after such material negative impact has come to our attention, through internal and/or external audits (described under Section 3.4.4.1.E. (*Own Workforce - Processes to remediate negative impacts and channels for own workforce to raise concerns*)) or (ii) assessments of concerns raised via any available channel to raise concerns.

Corrective Action Plans

Corrective action plans are established to close gaps between local practices and ST's social sustainability standards, such as human rights standards, health and safety standards, equal treatment standards, as identified in internal/external audits. Corrective action plans include requirements from our sites to implement measures to readdress any wrongdoing to people from our workforce caused by a gap with our labor and human rights principles, health and safety principles, equal treatment principles and otherwise. The proposed measures are established on an ad hoc basis depending on the specifics of the situation and the available remediation options. Evidence is gathered and reviewed for each suggested corrective action plan to ensure successful implementation.

We regularly develop and implement measures to prevent, mitigate or address any actual or potential negative impacts on our workforce that we might have caused or contributed to.

Specifically with regard to unequal pay, our general approach towards contributing to remedy to unequal pay is covered by our gender pay gap process (as described below). We value employee contributions and our objective is to safeguard equity in development, career opportunities, and remuneration. We monitor our gender pay ratio each quarter, comparing women's and men's salaries by job level for each country where we operate. Where a gap is assessed, we identify focus areas and the relevant regions and organizations work on closing these gaps.

In addition to the above, sites must also provide remedy on an ad hoc basis to remediate situations misaligned with our commitments to labor and human rights.

Data privacy

We have implemented a procedure for handling of reports of personal data breaches, which all employees handling personal data have been informed of through mandatory learning as well as information and awareness activities. All incidents that may constitute a breach of confidentiality, availability, or integrity are to be reported through a designated channel as soon as possible. When a breach is reported, relevant resources (e.g., Cybersecurity Incident Response Team ("CSIRT") and Head of Global Privacy) are immediately notified to ensure that we can assess and handle the breach in a timely manner.

Ethics Hotline

ST Ethics Hotline allows our employees and interested third parties to express any concern they might have of a potential violation of ST's Code of Conduct, applicable laws, the Company's policies or values. Further information on the Ethics Hotline is included in Section 3.4.5.3.A. (*Business Conduct - Business conduct policies and corporate culture*). Disclosure on reported work-related incidents, complaints, and severe human rights impacts within its own workforce, and any related material fines, sanctions or compensation for the reporting period, is included in Section 3.4.5.3.A. (*Business Conduct - Business conduct policies and corporate culture*).

Tracking effectiveness

We audit practices and policies at our major sites against our Corporate Labor and Human Rights Procedure at least every three years or when significant changes occur. This includes an assessment of site performance related to grievance mechanism communications and workers' awareness as part of the interview process. In addition, records are analyzed to identify any potential evidence of retaliation against workers.

Some of the engagement channels described above are also used by employees to raise grievances from workers' representatives (trade unions) meetings and grievances raised through communities.

3.4.4.1.F. Taking action on material impacts on own workforce, and approaches to managing material risks and pursuing material opportunities related to own workforce, and effectiveness of those actions

This section describes the various key actions we take to address potential material negative impacts on our own workforce, and to manage material risks. In our 2024 DMA we only identified material potential negative impacts and a material risk related to our own workforce. Therefore, our actions are aimed at mitigating and preventing these impacts or risk from occurring. All actions relate to our own workforce, are applicable to all ST sites, and are continuous and ongoing to reach the objectives and targets set in connection with related policies.

Through our Ethics Hotline we identify what action is needed and appropriate in response to a negative impact. The Ethics Hotline is further detailed in Section 3.4.5.3.A. (*Business conduct - Business conduct policies and corporate culture*).

3.4.4.1.F.1. Labor and Human Rights

Our efforts and focus target our material sustainability topics, as aligned with the general principles of international standards on performing human rights due diligence.

Risk assessments

As part of our due diligence, we deploy annual risk assessments at our major sites to identify and assess actual or potential adverse human rights impacts. These annual assessments cover the vast majority of our workforce and include:

- a corporate assessment of the inherent risks related to our activities and locations;
- site-specific assessments to identify the labor and human rights risks associated with local operations at our major sites; and
- RBA human rights self-assessment questionnaires.

Monitoring tool

Performance on social matters at ST sites is monitored monthly through specific reporting tools, such as working hours and leave reports. We also regularly monitor and review site performance against specific objectives and targets. As per our Corporate Labor and Human Rights Procedure, sites are required to implement measures to correct any identified gaps, including proactively and/or onward, in line with the above description of the corrective action plan process.

Audit and corrective action plans

These risk assessments and monitoring tools are complemented by an audit framework we have in place, which was implemented during the reporting year.

This audit framework is based on two audit programs: (i) RBA third-party audits which we aim to conduct every 2 years at our largest manufacturing sites; (ii) our internal corporate labor human rights audits which we aim to conduct at least once every three years at our main manufacturing sites.

If a finding is detected, sites are required to establish a corrective action plan. Where necessary, corrective action plans are established to prevent the reoccurrence, mitigation and/or elimination of identified adverse impacts and to address human rights-related negative impacts identified in our

workforce. Corrective action plans include: a) determination of root causes, and b) description of preventive and corrective actions to address the identified root causes and prevent future recurrence. Corrective actions may include policy or procedure changes, communication or training, and impact measurements.

We monitor and review our sites' performance by tracking corrective action plans to measure and improve their effectiveness in addressing adverse human rights impacts. Corrective actions must be identified and implemented within twelve months. Corporate Sustainability organizes quarterly meetings with relevant sites to follow their performance and share feedback.

RBA closure audits occur between nine and eighteen months after the initial audit and aim to validate the effective implementation of corrective actions and gap closure. Closure audits focus on open findings. However, should new non-conformances be identified, they are flagged and added during the closure audit. A dedicated corrective action plan aligned with these new findings is then expected.

Training and awareness, tracking effectiveness

We provide labor and human rights training to a specific category of employees in our manufacturing sites, and we have designed and implemented tools to communicate and address questions from employees on social responsibility standards. This training is provided to new hires upon their onboarding and refreshed annually. Through internal corporate labor human rights audits and external audits we periodically review our policies and actions' effectiveness to ensure that we are meeting the needs of our workforce.

Resources to take action

Our labor and human rights auditors are trained to conduct audits at ST sites. Each year, Corporate Sustainability allocates a budget for audits at ST sites that must be conducted each year. Several departments are engaged at different levels, ranging from topic owners to subject matter experts. These departments include, but are not limited to, Human Resources; Environment, Health & Safety; Global Procurement Organization; Compliance, Ethics & Privacy, and Sales and Marketing.

The labor and human rights program is managed by people with a sustainability focus and labor and human rights knowledge, within Corporate Sustainability. At major sites, general managers are accountable for local compliance with our Corporate Labor and Human Rights Procedure and the directors of Human Resources are responsible for supporting its deployment. Our sites also have local champions in various ST departments who support the implementation of sustainability programs including programs related to labor and human rights.

3.4.4.1.F.2. Health & Safety

Our programs and proactive measures reinforce our safety culture, improve our performance, prevent injuries, and support the health and well-being of our workforce. We have a health and safety management system throughout ST. Our manufacturing sites and non-manufacturing sites which are ISO 45001 certified are listed in Appendix 11.8. Our performance and management systems are evaluated annually through third-party surveillance audits, and certifications are renewed every three years.

We also run an internal corporate EHS audit program that aims to assess a site's performance against EHS objectives, programs, and procedures. Managers conduct regular safety visits and inspections, and safety training including evacuation drills that are organized across our sites. We encourage the reporting and investigation of near-misses, hazards, and unsafe behaviors and conditions as part of our proactive approach. It is our aim to conduct thorough, structured, and objective investigations for all incidents and

share best practice responses across our sites. We allocate relevant human, financial and technological resources to achieve these goals and maintain the OH&S management system.

The health of all employees working with chemical substances is monitored through a medical surveillance program. This includes biomonitoring, which assesses an individual's exposure to natural and synthetic chemicals based on analysis of human tissue and fluid samples. As an additional precaution, we regularly analyze the air in work areas to verify that our risk management measures are effective.

To support our employees, various sites design and implement health programs adapted to local legislation and requirements.

STCare

Our STCare program supports the well-being of our employees. We take a proactive approach and have implemented measures to reduce risk and assist our people. Every quarter, we monitor four key metrics globally and regionally. We aim to prevent mental health issues and to ensure our metrics meet our defined standards of acceptability: stress levels, anxiety levels, depression levels, risk of burnout.

As part of our STCare program, we have created a well-being index to gain insights into employee well-being and productivity across our sites. This tool enables sites to assess themselves and identify areas for improvement. It is based on ten criteria including working environment, people, culture, working time, and workload management.

To provide additional support we have partnered with Eutelmed, a healthcare platform which provides 24/7 access to dedicated confidential assistance.

Training and awareness

ST's Safety First program, launched in 2013, is based on the principle that 90% of accidents can be avoided. Within this program, we strive to strengthen our safety culture by reinforcing safe behaviors and working conditions through visits, training audits, communication and best practice sharing.

Training is a critical element in both prevention and remediation of incidents, and we provide corporate e-learning as well as local training to address risks and opportunities, legal requirements and prepare for emergency situations.

Each year we organize numerous safety events across our sites that are open to all employees. These include safety weeks and diverse activities to promote continuous improvement. The overall aim is to raise health and safety awareness, explore new ideas, and share best practices, with a focus on prevention. For example, our sites recognize world day for safety and health at work, an international celebration endorsed by the United Nations. Events and activities are organized to continue to raise employees' safety awareness.

Measuring effectiveness

We have established a range of safety indicators to allow us to measure the effectiveness of our management systems and assess if they are achieving the expected outcomes. On a quarterly basis, performance is measured, monitored, and evaluated at both site and corporate level. As part of this process, we assess the effectiveness of operational controls such as emergency response and consider if modifications or new controls are needed. Our safety indicators are designed to allow us to measure the effectiveness of actions and measures implemented.

Hierarchy of controls

The hierarchy of controls is central to our OH&S management system and includes measures for risk assessment, reduction and control. Managers conduct frequent site visits and investigations to identify potential hazards as well as unsafe acts and conditions. This approach helps to determine what actions are needed to prevent potential negative impact on our workforce.

Should an actual impact occur, specialist safety professionals conduct a thorough investigation of the root cause of any actual impacts on our workforce before taking actions to address them. Where applicable this involves the injured party's manager to help identify appropriate corrective and preventative actions.

Resources to take action

ST allocates appropriate resources to achieve health and safety goals and maintain the OH&S management system. Our health and safety programs are managed by people with a sustainability focus and EHS knowledge, within Corporate Sustainability and in various other ST departments. These include topical experts and OH&S auditors, who manage our internal corporate EHS audit program. These functions are supported by site managers, EHS managers and engineers and contacts at site level. At our sites, managers are encouraged to conduct regular safety visits and inspections. Teams across our various sites are responsible for organizing and deploying safety awareness events.

3.4.4.1.F.3. Equal treatment and opportunities for all

Our equal treatment strategy comprises the following: strengthening diversity, growing equity and developing inclusion.

Gender pay ratio

Our objective is to safeguard equity in development, career opportunities, and remuneration. We monitor our gender pay ratio each quarter, comparing women's and men's salaries by job level for each country where we operate.

Adjusted gender pay gap

We use an adjusted gender pay gap index to monitor and detect any gaps. It is our ambition to reach parity, monitoring any pay gaps that persist in certain job grades and countries. The index is used to report and track any gaps, enabling Human Resources to gain a better understanding of the situation and make corrections where necessary. Further detail on our adjusted gender pay gap can be found in Section 3.4.4.1.G.6. (*Own workforce - Compensation metrics*).

Flexible working

We believe that hybrid work can improve quality of life and help us to attract and retain talent. We have introduced a company-wide framework for flexible working arrangements. This allows employees to work from home or other locations, in accordance with local regulations.

Training and awareness

We aim to overcome stereotypes by regularly reinforcing an inclusive mindset that recognizes the value and richness of a diverse workforce. To help us to achieve this, we provide two main training courses: equal treatment e-learning and unconscious bias workshops. We strive to create an environment where all employees feel free to speak up and report concerns by training managers on the importance of transparency and culture. We take concerns raised seriously and review them thoroughly.

We have issued internal inclusive communication guidelines. We believe our language and images shape attitudes as to what is considered normal and acceptable. Inclusive communication goes beyond avoiding offensive words and includes non-stereotypical, unbiased, and gender-neutral language, as well as proper acknowledgments of people and cultures.

Employee engagement

We have established a strong focus on setting up ERGs to promote inclusion in the workplace. These are voluntary, employee-led groups of people belonging to a minority or having a shared characteristic, as well as their allies. The aim of the ERGs is to provide a safe space for members to share their experiences and challenges, help leaders understand what matters to these employees, and to support their professional development.

We believe it is critical to listen to the perspectives of our employees. To support our younger employees, we launched our 'Blossom' program three years ago to enable younger employees to voice their opinions, offer their ideas, be creative, and share their expectations.

Our mentorship program is an essential collaboration tool for personal and professional development. The program is open to all employees and but can be particularly empowering for women who face more potential barriers in the workplace.

Measuring effectiveness

Each year, taking into account our equal treatment strategy, Corporate Sustainability sets company sustainability priorities and goals. We identify what actions are needed and appropriate by tracking and monitoring the goals to meet our objectives. We share all outcomes with regional Human Resources and Group Human Resources who set corrective action plans wherever necessary.

Resources to take action

The various actions related to equal treatment are managed by people with a sustainability focus and knowledge on equal treatment within Corporate Sustainability and other relevant ST departments, such as Compensation and Benefits Department. Site Human Resources Directors are responsible for applying and respecting our Corporate Labor and Human rights Procedure. The Ethics Hotline is under the joint responsibility of Compliance, Ethics and Privacy Department and our Corporate Audit and Risk Department. Our Code of Conduct is managed by the Compliance, Ethics & Privacy Department and by the Corporate Audit & Risk Department. Those instruments further support the management and implementation of our equal treatment principles and strategy.

The Corporate Compensation and Benefits Department is responsible for issuing quarterly adjusted gender pay gap reports that are used to share gender pay gap status with regional and Group Human Resources. Our ERGs, WISE, STAND and ABLE are also encouraged to share any concern that their members have in relation to equal opportunities with the equal treatment program manager and their sponsors. To support career development and provide access to ST's internal coaching office made up of 30+ internal coaches. Our internal mentoring program is an additional resource to foster collaboration and support team growth. We have built guidelines for mentors, which take into consideration the specific needs of employees.

3.4.4.1.F.4. Data privacy

We prioritize the protection of personal data and seek to foster a culture of awareness and compliance among our employees. To this end, we offer mandatory training and organize awareness activities specifically focused on personal data protection. Our personal data protection training is required every two years for all employees globally who handle personal data at any level. This helps our team to remain up-to-date with the latest regulations, best practices, and organizational policies regarding data protection. Additionally, new employees at ST are required to complete the general personal data protection training as part of their onboarding process.

Information and cybersecurity

A data breach is a type of cyber incident which leads to the accidental or unlawful destruction, loss, alteration, unauthorized disclosure of, or access to the personal data transmitted, stored, or otherwise processed. To reduce the likelihood of this type of cyber incident, and thus to reduce the likelihood that ST's own practices cause or contribute to negative impact on our workforce due to leakage of personal information, ST has adopted cybersecurity measures.

Campaigns and training sessions are held regularly for employees globally to raise awareness of cyber risks and threats, and to facilitate preparedness in case of cyber incidents. To address exposure to cyber incidents, we have invested in the ability to detect and respond to cyber incidents, to manage and reduce relevant vulnerabilities, and to reduce the time needed to recover in case of incidents. We proactively monitor threats, vulnerabilities, and effectiveness of security controls.

Resources to take action

ST allocates appropriate resources and invests in the information security of systems and processes to ensure that data privacy and information security policies and procedures are correctly implemented and complied with. Data privacy falls under the responsibility of the Corporate Compliance, Ethics & Privacy Department, specifically our Head of Global Privacy. Information security, including cybersecurity, falls under the responsibility of the Information Security team within the wider Digital Transformation and Information Technology Department.

3.4.4.1.G Metrics and targets related to own workforce

3.4.4.1.G.1. Targets related to managing material negative impacts, advancing positive impacts, and managing material risks and opportunities

Target related to health and safety (entity-specific)

We aim to provide safe and healthy workplaces for our workforce.

As part of our commitment to put safety first, as described in our Corporate OH&S Policy, we have set an entity-specific annual target to achieve a Total Recordable Case Rate ("TRC Rate") of 0.75 or less for work-related injuries and illnesses of our own workforce (employees and non-employees), including onsite value chain workers, throughout our operations worldwide. The base year for this target is 2024 at the end of which the baseline value, i.e. the TRC Rate, was 0.65.

This target contributes to UN SDG 8.8 on protecting labor rights and promoting safe and secure working environments for all workers.

We follow the OSHA for recording and tracking work-related injuries and illnesses in an online tool. It covers our own workforce, including onsite value chain workers. The methodology used to calculate the TRC Rate is the following:

- TRC Rate for employees and non-employees = (number of work-related injuries and illnesses * 1,000,000) / (number of working hours)
- TRC Rate for onsite value chain workers = (number of work-related injuries and illnesses * 500) / (number of full time equivalent employees)

To determine the number of working hours we use a mix of data available via our automatic badging systems or an estimate, as described in more detail in Section 3.4.4.1.G.5. (*Own workforce - Health and safety metrics (S1-14)*).

We previously had set a TRC Rate target to reach a TRC Rate of 0.15 or less by 2025 (work related injuries and illnesses) whereby the calculation methodology of the TRC Rate was based on the OSHA. In 2024 we updated (i) the target reference year from 2025 to an annual target; and (ii) updated the TRC Rate to reflect the CSRD calculation methodology on the rate of work-related injuries and illnesses, which results in the rate being multiplied by five.

Target related to working conditions and other related rights (entity-specific)

As part of our commitment to respect labor and human rights across the Company, laid down in our Corporate Social Responsibility Policy and Corporate Labor and Human Rights Procedure (each as defined in Appendix 11.7) we have set an entity-specific target to achieve RBA Platinum recognition for eleven manufacturing sites (as detailed in the table included in Appendix 11.9) by the end of 2030. This target contributes to UN SDGs 8.7 and 8.8 on decent work and labor rights.

The base year for this target is 2024, at the end of which ten of our eleven majority-owned main manufacturing sites had received an RBA Platinum recognition.

This target is based on third-party RBA audits on verification of compliance with RBA standards on labor rights (including excessive working hours and adequate wages), and on human rights (including all forms of forced/bonded labor, child labor, student workers, inadequate housing).

We aim to conduct these audits every two years on all our majority-owned main manufacturing sites. To achieve RBA platinum recognition, the site must score 200/200, which means that either there were no findings or, that all findings are closed. The audit data and findings are recorded and tracked in the RBA's online platform.

We previously had set a target to get 100% of our largest manufacturing sites recognized for social responsibility by external international bodies by 2025, which related to achieving RBA platinum recognition. To demonstrate our ambition with regard to labor and human rights, we have extended the target term to 2030 and have more precisely formulated the scope of our manufacturing sites. This change does not effect the comparability of the results of this target versus prior disclosures.

Target related to equal treatment and opportunities for all - adjusted gender pay gap below 5% (entity-specific)

We value employee contributions and aim to maintain an environment free of any kind of discrimination. Our objective, based on our Code of Conduct, Corporate Social Responsibility Policy, and our Corporate Labor and Human Rights Procedure is to safeguard equity in development, career opportunities and remuneration, including the right to equal pay for work of equal value regardless of gender.

In connection with this objective, in 2024, we have set an entity-specific annual target to maintain an adjusted gender pay gap below 5%, throughout our operations. The base year for this target is 2024 and the baseline value is -1.8%, illustrating our commitment to equal pay for equal work. While the overall gap

is small, we identified some areas to focus on and the relevant regions and organizations are working on closing these gaps.

We monitor our adjusted gender pay gap each quarter, comparing women's and men's average salaries plus variable, by job level for each country where we operate ((men's salary - women's salary / men's salary) x100)). Global averages for each employee category are calculated weighted by country and headcount in the job level.

The table below shows the adjusted pay gap per group of employee in 2024.

	Operators ⁽¹⁾	Non-Exempts ⁽²⁾	Exempts ⁽³⁾	Employees ⁽⁴⁾
Adjusted pay gap	(4.2)%	(3.3)%	0.3%	(1.8)%

- (1) Operators are employees working in production operations.
- (2) Non-Exempts are Employees who hold positions normally requiring higher education and who are eligible for overtime compensation.
- (3) Exempts are employees who hold positions normally requiring graduate or post graduate education and who are not eligible to overtime compensation.
- (4) The population considered for the adjusted pay gap includes only active employees. Individuals on leave, as well as apprentices, assignees, expatriates, and those on local plus contracts are excluded. Employees with less than one year of seniority and senior management are also excluded. This ensures that an accurate comparison of remuneration (Base Salary and Premiums Paid during the year) is made.

This target contributes to UN SDG 5.5 focusing on women's full and effective participation and equal opportunities for leadership at all levels of decision-making in economic life.

The data is extracted from our Human Resources database, which covers all ST operations worldwide. We monitor our adjusted gender pay gap each quarter.

Target related to equal treatment and opportunities for all - gender distribution (entity-specific)

We recognize the negative impacts that workplace discrimination, harassment, and unequal opportunities can have on our workforce and their careers. In alignment with our dedication to maintain a culture free of discrimination and harassment, as stated in our Code of Conduct, Corporate Social Responsibility Policy and in our Corporate Labor and Human Rights Procedure, we foster an inclusive workplace where equity and respect are supported.

In connection herewith, we have set an entity-specific target for the representation of women (i) in management roles to reach at least 25% by 2035; and (ii) in Senior Management roles to reach at least 25% by 2035, both throughout our operations worldwide.

This women in management target contributes to UN SDG 5.5 focusing on women's full and effective participation and equal opportunities for leadership at all levels of decision-making in economic life.

The base year for this target is 2024. On December 31, 2024, we had 21% of women in management and 10% of women in Senior Management.

Our previous target was to reach at least 20% women in every management level by 2025 and 20% women in our Senior Management. In 2023 we achieved an overall total of 20% of women in management positions, however the representation of women in the Senior Management was 10%. In line with our equal treatment ambitions, we have set this new women in management target, extending the target term to 2035 and increasing the percentage of women representation. This change does not effect the comparability of the results of this target versus prior disclosures.

We monitor the progress on a quarterly basis, extracting data from our Human Resources people management system.

3.4.4.1.G.2. Metrics

Characteristics of the undertaking's employees (S1-6)

In the below table, ST is providing the key characteristics of its employees whether by gender or by country or by type of employment.

This view serves as a basis for all the other qualitative disclosures made in this report and is aligned when it comes to definition of employees. It is also serving as a basis for calculation for other metrics to be disclosed under other disclosures requirements in this Social section.

Employee benefits liabilities are further detailed in Note 7.6.22 of our consolidated financial statements and employee benefits expenses are further detailed in Note 7.6.27 of our consolidated financial statements.

Overview by gender

In headcount	December 31, 2024
Male	33,182
Female	17,702
Total employees	50,884
Average number of employees	51,961

As of December 31, 2024, ST had 50,884 employees out which 33,182 are male and 17,702 are female. No employee reported "other" and all employees reported their gender as of December 31, 2024.

The numbers presented above includes our employees registered as active, as well as on leave, and are reported in headcount. They are presented at the end of the reporting period i.e. December 31, 2024.

The average number of employees was 51,961 in this reporting year.

ST considers as employee, any person with an employment contract with ST in accordance with national laws or practice. ST has performed a legal and Human Resources review of the national laws and local practices to ensure consistency of the definition across its locations. As such, certain categories such as intern have not been considered as employee but as non-employee upon consolidation of our 2024 reporting year numbers. Note however that our apprentices are considered as employees.

Overview by country

In headcount	December 31, 2024
France	12,957
Italy	12,726
Others	25,201
Total	50,884

Due to its worldwide footprint and global markets, ST is present in 40 countries with the majority being in France and Italy, in line with our manufacturing footprint.

Overview by category of employee (permanent vs temporary) and gender

In headcount	December 31, 2024		
	Female	Male	Total
Number of permanent employees	16,883	32,241	49,124
Number of temporary employees	819	941	1,760
Number of full-time employees	16,757	32,707	49,464
Number of part-time employees	945	475	1,420
Number of employees	17,702	33,182	50,884

The table above presents the breakdown of our female and male employees according to their type of employment (permanent vs. temporary). At ST in this reporting year, there is no non-guaranteed hours employees.

Most of ST employees are permanent and full-time. Part-time employees are mainly the result of employees' requests where temporary employees represent generally apprentice or expatriate.

Employee's turnover

In headcount	2024
The total number of employees who have left ST during the reporting period.	3,063
The rate of employee turnover in the reporting period	6%

The number of employees who have left ST during the reporting period is considered as normal fluctuation. It includes employees' resignation, termination from ST, retirement or death. 75% of the total is represented by employees voluntarily leaving ST. The rate of employee turnover is calculated based on this number out of the average number of employees during the reporting period.

Characteristics of non-employee workers in the undertaking's own workforce (S1-7)

In headcount	December 31, 2024
Total number of non-employees in ST's workforce	3,015

As of December 31, 2024, ST had 3,015 non-employees (headcount) in its own workforce. Non-employees include intern or thesis student, agency or temporary workers, and contractors. It includes non-employees that are on leave. All the data presented in the table above are actual data captured in our Human Resources system.

The total includes self-employed people represented by contractors working for ST during the reporting year. This is considering the definition provided by the standard and related application requirements i.e. contractors hired to perform work that would otherwise be carried out by an employee, or to perform work in a public area (for example, on a road, on the street) or to deliver the work/service directly at the workplace of a client of the organization. In addition, it also includes people who have been considered as primarily engaged in employment activities as per the standard definition, in line with NACE code N78. It means their work is under the direction of ST. It includes people who filled in for employees who were temporarily absent (due to illness, holiday, parental leave, etc.).

3.4.4.1.G.3. Equal treatment metrics (S1-9)

Gender distribution at top management level

In headcount	December 31, 2024	
		As a %
Male	28	90%
Female	3	10%
Total	31	100%

As of December 31, 2024, 3 female employees were included in ST top management, which represents 10% of the total. Please refer to General section for the definition of our top management, it includes our Managing Board, Presidents and Executive Vice Presidents.

Distribution of employees by age group

In headcount	December 31, 2024	
Under 30 years old	10,980	21 %
30-50 years old	25,728	51 %
Over 50 years old	14,176	28 %
Total employees	50,884	100 %

As of December 31, 2024, more than half of ST employees were aged between 30 and 50 years old.

3.4.4.1.G.4. Adequate wage (S1-10)

ST seeks to offer a competitive compensation and benefits package based on industry survey results in the regions where we operate. At a minimum, ST aims to comply with applicable wage laws and collective bargaining agreements, including minimum wages, overtime hours, and legally mandated benefits.

We also attach importance to the standard of living of its employees. With this in mind, and in the context of the CSRD, ST collected and analyzed the remuneration of all its employees across the entire company. The results show that no ST employee earns less than the adequate wage as defined in the new European CSRD regulation.

3.4.4.1.G.5. Health and safety metrics (S1-14)

	December 31, 2024	
	EMPLOYEES	NON-EMPLOYEES
People covered by ST's health and safety management system (% in headcount)		88%
People covered by a health and safety management system which has been internally audited and/or audited or certified by an external party (%)		88%
Number of fatalities as a result of work-related injuries	0	0
Number of fatalities as a result of work-related ill health	0	0
Number of fatalities as a result of work-related injuries of other workers working on ST's sites	—	—
Number of fatalities as a result of work-related ill health of other workers working on ST's sites	—	—
Number of recordable work-related accidents	52	0
Rate of recordable work-related accidents	0.54	0
Number of cases of recordable work-related ill health, subject to legal restrictions on the collection of data	6	—
Number of days lost to work-related injuries and fatalities from work-related accidents, work-related ill health and fatalities from ill health	1,730	—

At ST, 88 % of our own workforce is covered by a health and safety management system on a headcount basis. It includes our employees and our non-employees as per the standards definition. ST strategy is to ensure the coverage of our own workforce and supply chain workers present in manufacturing sites and large non-manufacturing sites. In addition, our health and safety management systems are based on the recognized standard ISO 45001. ISO 45001 is an international standard for occupational health and safety management systems. All ISO 45001 certified sites are audited on a yearly basis by an external certification body. We aim to renew the certification every three years. The certificates are disclosed on our company website.

In this reporting year, ST has no fatality because of work-related injuries nor because of work-related ill health for both our own workforce and supply chain workers. Work-related injuries and work-related ill health arise from exposure to hazards at work and follow the definition of the standard. Work-related injury or ill health that results in any of the following: (i) death, days away from work, restricted work or transfer to another job, medical treatment beyond first aid, or loss of consciousness; or (ii) significant injury or ill health diagnosed by a physician or other licensed healthcare professional, even if it does not result in death, days away from work, restricted work or job transfer, medical treatment beyond first aid, or loss of consciousness.

The number of recordable work-related accidents amounted to 52 for ST employees with a rate of 0.54 in this reporting year. Half of the accidents relate to slipping, tripping or falling in common areas. The computation follows the standard guidance. The rates represent the number of respective cases per one million hours worked. It indicates the number of work-related accidents per 500 full time people in the workforce over a 1-year timeframe. Most of our locations derive the number of hours worked via automatic badging. When it is not possible, the number of hours worked is estimated on the basis of theoretical standard worked hours to which hours of absences are removed. There was no recordable work-related accident for ST non-employees.

In this reporting year, ST had 6 cases of recordable work-related ill-health subject to legal restrictions on the collection of data. Work-related illnesses include both acute and chronic illnesses, such as, but not limited to, Musculoskeletal disorders, skin and respiratory diseases, cancers, diseases caused by physical agents (e.g., noise-induced hearing loss, vibration-caused diseases), mental illnesses. It is aligned with ILO list of occupational diseases. The cases disclosed relate to cases notified to ST or identified by ST through medical surveillance during the reporting period.

The number of days lost to work-related injuries and fatalities from work-related accidents, work-related ill health and fatalities from ill health amounted to 1,730 in this reporting year for ST employees. It includes the first full day and the last day of absence based on calendar days. Thus, days on which the affected individual is not scheduled for work (for example, weekends, public holidays) will count as lost days.

In addition to the definition of employees and non-employees provided earlier in this section, certain value chain workers are working on ST's sites, but are not included in ST's own workforce. It includes: workers from a supplier providing goods or services to ST; and workers of an equipment supplier who, at one or more of ST's workplaces, perform regular maintenance on the supplier's equipment (for example, photocopier). For the value chain workers, there was as of December 31, 2024 no fatalities as a result of work-related injuries and work-related ill health.

3.4.4.1.G.6. Compensation metrics (S1-16)

Gender pay gap – All employees

We value employee contributions and aim to maintain an environment free of any kind of discrimination. Our objective is to safeguard equity in development, career opportunities, and remuneration.

The unadjusted gender pay gap within ST, as defined by the CSRD, calculated as the difference between men's average hourly wage and women's average hourly wage (without considering geographical location or job level differences), expressed as a percentage of men's average hourly wage, is 32%.

$$\frac{\text{Average of Men's Base+Variable (Hourly FTE) - Average of Women's Base+Variable (Hourly FTE)}}{\text{Average of Men's Base+Variable (Hourly FTE)}} \text{ In \%}$$

% of the average pay level of male employees	All employees
Gender pay gap	32%

This pay gap is mainly due to a higher proportion of men at higher levels of responsibility, combined with a relatively higher proportion of women in operator roles in countries such as China, Malaysia, Morocco, Philippine and Singapore where we have significant manufacturing activities. All Employees (Active, Leave and Leave with Pay at the end of the reporting period) are included consistent with S1-6 Employees Definition.

Remuneration ratio

Annual total remuneration ratio of the highest paid individual to the median annual total remuneration for all employees	171
--	-----

We have a global workforce operating in over 40 countries. Based on CSRD requirements, the above ratio has been calculated considering employees working in all these countries, including China, Malaysia, Morocco, Philippine and Singapore where we have significant manufacturing activities, and which represent approximately 38% of our global population as of December 31, 2024. Calculation below:

Annual total remuneration for the undertaking's highest paid individual⁽¹⁾

Median employee annual total remuneration (excluding the highest – paid individual)⁽²⁾⁽³⁾

- (1) The annual total remuneration for the highest-paid individual and for the other Employees is comprised of base salary, cash benefits, benefits in kind including Pension amounts, and all other direct remuneration, such as short- and long-term remuneration paid, as presented in Section 4.9. (*Remuneration Report*) of this document.
- (2) All Employees (Active, Leave and Leave with Pay at the end of the reporting period) are included consistent with S1-6 Employees Definition.
- (3) Remuneration has been annualized for employees whom did not work the full reporting period.

An overview of incidents, complaints and severe human rights impacts is reported in Section 3.4.5.3.A. (*Business conduct - Business conduct policies and corporate culture*).

3.4.4.2 Workers in the supply chain (S2)

Our ambition is to source and purchase goods and services from suppliers and subcontractors who share our values of respecting people and the environment, which values are included in our Code of Conduct.

The disclosure of this section on workers in the supply chain applies to all our suppliers and subcontractors providing goods or services to ST, through direct business relationships or indirectly, through our supply chain.

Our suppliers include large-scale manufacturing subcontractors, material suppliers, and equipment and spare-parts suppliers, smaller scale onsite service providers and labor agencies. Our subcontractors are our foundries and OSATs, i.e. our outsourced manufacturing partners, which are a critical subgroup of our suppliers. More information about our upstream value chain is provided in Section 3.4.2.3.A. (*Strategy - Strategy, business model and value chain*).

This section about workers in the supply chain includes information about our upstream value chain. For ease of reading we use the generic word "suppliers" instead of upstream value chain. If the information only concerns subcontractors we have indicated this in the relevant disclosure.

As we have an extensive global supply chain with over 6,000 direct suppliers worldwide, we aim to systematically assess and mitigate sustainability negative impacts and risks in our operations and supply chain. Through the use of the RBA Code of Conduct (as described in Section 3.4.4.1.C. above (*Own workforce - Policies related to our own workforce*)) as our supplier code of conduct we seek to manage impacts and risks throughout our supply chain.

Our responsible supply chain program runs across all our operations and throughout the life cycle of our supplier relationship. We monitor our suppliers using social, environmental, and governance criteria, auditing those that are classified as high risk. This enables us to mitigate major risks and impacts, with a focus on, *inter alia*, supply chain workers' health and safety, unfair working conditions and human rights, including forced labor of workers and child labor.

In implementing our policies, actions and targets we focus on those activities in the supply chain where we can make an impact, and therefore our actions and targets are mostly directed at our tier one suppliers.

Supply chain workers related IROs (SBM-3)

The following table lists the IROs related to supply chain workers we have identified and assessed as material in our 2024 DMA, including the programs we have in place to address such IROs.

S2 – Workers in the supply chain							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ¹ or inherent ² basis	ST response	Targets
Negative impact on suppliers' workers due to human rights violation (forced labor incl. bonded labor)	Negative impact	Potential	Upstream	Short term	Residual basis	ST's responsible supply chain program	Target setting in process
Negative impact on subcontractors' workers due to human rights violation (forced labor incl. bonded labor)	Negative impact	Potential	Upstream	Long term	Inherent basis	ST's responsible supply chain program	
Negative impact on supplier's workers due to human rights violation (child labor and young workers)	Negative impact	Potential	Upstream	Long term	Inherent basis	ST's responsible supply chain program	
Negative impact on subcontractors' workers due to human rights violation (child labor and young workers)	Negative impact	Potential	Upstream	Long term	Inherent basis	ST's responsible supply chain program	
Risk of human rights violation (incl. all forms of forced labor) for subcontractors' workers leading to allegation, litigation, fines or penalties towards ST as well as affecting ST social objectives, commitments and reputation, resulting in business loss	Risk	Potential	Upstream	Long term	Inherent basis	ST's responsible supply chain program	

(1) "Residual" refers to the materiality assessment that takes into account existing mitigation measures.

(2) "Inherent" refers to the materiality assessment without taking into account any existing mitigation measures

3.4.4.2.A. Interests and views of stakeholders - workers in the supply chain

Engagement with supply chain workers takes place as described in Section 3.4.2.3 B. (*Strategy- Interests and views of stakeholders*) in which supply chain workers have been indicated as being one of our key stakeholders, whose perspectives are taken into account when defining our material topics and IROs and as such influences our strategy. They may be directly impacted by our activities. We utilize the RBA standards, tools and methodologies to engage with them and collect their feedback as described in Section 3.4.4.2.D. (*Workers in the supply chain - Processes for engaging with supply chain workers about impacts*).

3.4.4.2.B. Material impacts, risks and opportunities and their interaction with strategy and business model

We have identified the following potential negative impacts in our supply chain:

- forced labor, including bonded labor: we have concluded on the materiality of these negative impacts based on ESRS 1 paragraph 45 which states that for potential negative human rights impact, the severity of the impact takes precedence over its likelihood.
- child labor and young workers: the materiality has been mainly driven by young workers considerations and taking into account ESRS 1 paragraph 45.

These potential negative impacts have been assessed as material on an inherent basis, since we have mitigating measures in place to manage them, leading to their non-materiality on a residual basis.

We have also identified a potential risk of human rights violations affecting workers of our subcontractors is a risk for ST (as described in the IRO table above). Human rights violations at our subcontractors have been assessed as material due to the nature of their activity and geographical location. In addition, incidents around human rights would have a direct impact on our customers for whom our subcontractors manufacture. However, the risk is material on an inherent basis, since we adopt mitigating measures to monitor our subcontractors' practices.

All supply chain workers who are likely to be impacted by us are included in the scope of the disclosure under Section 3.4.2.3.C. (*Strategy - Material impacts, risks and opportunities and their interaction with strategy and business model*) above.

There are several types of supply chain workers who could be materially impacted, such as, (i) workers working on our sites, but who are not part of our own workforce, (ii) workers working for entities further in our upstream supply chain, like those involved in the extraction of metals and minerals, in refining, manufacturing and other forms of processing, (iii) workers who are particularly vulnerable to negative impacts (i.e. migrant workers, women or young workers). The material topics related to supply chain workers, that have been identified through the 2024 DMA cover all types of workers in our supply chain. ST's supply chain sustainability due diligence process (as described in Section D below), and its engagement process with supply chain workers (as described in Section D below), enable ST to develop an understanding of how supply chain workers with particular characteristics, those working in particular contexts, or those undertaking particular activities may be at greater risk of being negatively impacted.

At our tier one supply chain level, the risks and impacts concerning forced labor are mostly identified in Asia, where this issue can be considered widespread in the manufacturing industry, a labor-intensive sector. ST may be more exposed to risks of negative impacts related to human rights violation including all forms of forced labor through its subcontractors, as most of them are located in this region.

3.4.4.2.C. Policies related to supply chain workers

Aligned with our Code of Conduct, we are committed to partnering with suppliers who share our values of respecting people and the environment and of driving business with integrity and excellence. Our Supply Chain Responsibility Standard Operating Procedure, available on our intranet to our internal stakeholders

who need to help implement it, establishes a common and transversal framework for managing social and environmental due diligence in ST's supply chain.

The due diligence process seeks to identify, prevent, mitigate, and account for how we address potential negative impacts on supply chain workers (including potential negative impacts related to child labor, young workers and forced labor) and on the environment in our supply chain. Our Supply Chain Responsibility SOP is aligned with the RBA Code of Conduct, which we adopted as our supplier code of conduct. All tier one suppliers must sign an acknowledgement and a commitment to RBA Code of Conduct procedure. The RBA Code of Conduct takes into account relevant internationally recognized instruments including UN Universal Declaration of Human Rights, OECD Guidelines for Multinational Enterprises, UN Guiding Principles on Business and Human Rights, ILO Declaration on Fundamental Principles and Rights at Work, ILO Fundamental Conventions. The RBA Code of Conduct explicitly prohibits any form of forced labor, human trafficking and child labor, and addresses the safety workers as well as precarious work.

In 2024, no severe human rights impact (based on the scale, scope and irremediability of the impact) related to child labor and forced labor or human trafficking has been identified in our supply chain. However, supplier audits identified some cases of non-respect of the RBA Code of Conduct which involved supply chain workers. Among the eleven ILO indicators of forced labor, we identified in 2024 at supplier facility level some of those indicators, namely: retention of workers' identity documents, withholding of wages as well as debt bondage. They all have been addressed through corrective action plans and remediation when appropriate, as described in Section 3.4.4.2.E. (*Workers in the supply chain - Processes to remediate negative impacts and channels for own workforce to raise concerns*) to cease negative impacts on supply chain workers.

The Supply Chain Responsibility SOP applies to all ST entities and all suppliers, including supply chain workers, providing goods, products or services to ST through direct business relationships or indirectly. Implementation of this Supply Chain Responsibility SOP and the supplier code of conduct falls under the accountability of the Head of our Global Procurement Organization.

Furthermore, specifically with regard to supply chain actors involved in the sourcing of certain raw minerals needed to manufacture semiconductors, our Policy Statement on Conflict Minerals and Responsible Minerals Sourcing (available on st.com for everybody, including to potentially affected stakeholders and stakeholders who need to help implement it) as well as our internal procedures on Conflict Minerals Management and Responsible Mineral Sourcing, which are aligned with the RBA standards, cover more specifically negative social and environmental impacts of mineral extraction or processing of these minerals which come from suppliers at the origin of ST's supply chain, including human rights violations. This policy statement and the internal procedure covers mines and smelters workers and its implementation falls under the accountability of the head of our Global Quality and Reliability Department.

3.4.4.2.D. Processes for engaging with supply chain workers about impacts

We engage through various channels with our supply chain workers to understand our actual and potential material impacts on them.

Sustainability supplier audit – worker interviews

Direct engagement with our supply chain workers takes place during RBA supplier audits, described in more detail in Section 3.4.4.1.F. (*Own workforce - Taking action on material impacts on own workforce, and approaches to managing material risks and pursuing material opportunities related to own workforce, and effectiveness of those actions*), conducted at supplier facilities which ST has identified as being at high sustainability risk. This onsite assessment, which commonly is performed every 2 years as long as the supplier facility is at high risk, systematically includes worker interviews. The outcomes of these interviews are included in the audit reports.

According to the RBA validated audit process standard, interviewees should represent a range of diverse worker profiles, including workers who may be particularly vulnerable to impacts and/or marginalized.

These worker interviews, which are conducted privately and under confidentiality, allow the auditor to collect information about, amongst others, the site, the factory, the working conditions, worker treatment, adherence to labor and human rights. During the interview, the auditor also shares with the auditee worker how to access the RBA grievance mechanism, if needed.

Besides the identification of potential cases of child labor, forced labor and other human rights violations, these interviews also enable us to understand supply chain worker concerns and interests.

These interviews can lead to a corrective action plan and a remediation process, in case of child labor, forced labor or other human rights violations, to be deployed by the supplier. This can also result in setting up actions by the supplier to respond to workers' interests and concerns, related to social, health and safety and environmental topics. In monitoring and tracking the implementation of these corrective action plans, we are able to assess the effectiveness of our engagement with supply chain workers.

In addition to those formal interactions, informal interactions occur during the third-party assessor visit of the supplier facility, by having brief interactions with workers at their place of work or in other areas of the factory like dormitories, canteens, common areas, parking area.

Onsite supply chain worker awareness on RBA

For supply chain workers present on our sites, direct communication during their induction training includes information sharing on health and safety rules, on our Code of Conduct as well as on RBA Code of Conduct and our Ethics Hotline. This is done by our site's sustainability champions, who provide also regularly refresher sessions.

Dedicated ST resources

Our Global Procurement Organization Department, manages *inter alia* our supply chain sustainability due diligence program and is composed of dedicated people focused on monitoring compliance of the suppliers identified at sustainability high risk, with the RBA Code of Conduct, including the audit requirements. In a continuous improvement process aiming to comply with the RBA Code of Conduct, our Third Party Management Department supports suppliers to tackle, among others, labor and human rights issues as applicable. The members of this program regularly participate in trainings, workshops with peers and sustainability experts on various sustainability topics.

3.4.4.2.E. Processes to remediate negative impacts and channels for own workforce to raise concerns

Process to provide remediation

Providing or contributing to remediation of material negative impacts on supply chain workers which we have caused or contributed to, is part of our due diligence process. Material negative impacts are assessed during the audit process (RBA audit and internal corporate EHS or labor human rights audits, as described in Section 3.4.4.1 F. (*Own workforce - Taking action on material impacts on own workforce, and approaches to managing material risks and pursuing material opportunities related to own workforce, and effectiveness of those actions*) above). Depending on the outcome of the audit and the material negative impact assessed, we require the supplier to set up and deploy the necessary appropriate remediation. For third-party audits, the RBA must approve the supplier remediation plan, which is closely monitored by the TPM Department and only closed based on shared evidence within a predefined timeframe.

Raising concerns

ST Ethics Hotline

To maintain a culture of transparency and ethical behavior, we encourage all employees and interested stakeholders, including our business partners such as suppliers and their workers, to speak up and report any concerns they might have regarding possible violations of our Code of Conduct, our policies and procedures, the law, and/or RBA standards. Concerns can be raised via our 24/7 available multilingual Ethics Hotline, anonymously, without fear of retaliation, as further described in Section 3.4.5.3.A (*Business conduct - Business conduct policies and corporate culture*) below.

Through its Ethics Hotline ST makes efforts for this feedback system to be fair, reliable and open, thereby enhancing supply chain workers trust and engagement.

Supplier channels

In addition, and aligned with the RBA Code of Conduct, we expect our suppliers to also have a channel in place through which supply chain worker can raise concerns and feedback can be shared. During RBA audits it is assessed whether the supplier has an adequate and effective grievance mechanism. If this is not the case, the supplier is required to set up a corrective action plan for implementing such a mechanism through which supply chain workers can, safely, anonymously and without fear of retaliation, raise concerns and give feedback. Depending on the gap, this corrective action plan may include establishing an adequate speak up policy, communication, training as well as impact measurement of it.

Third-party grievance channels

Supply chain workers can also report grievances through third-party grievance channels, such as:

- RBA Voices (accessible via the RBA website): workers of RBA members and their suppliers can use this channel to report grievances, *inter alia*, with regard to i.e. labor, human rights and environment. The feedback from workers we receive through this designated channel provides us with insight into material topics for supply chain workers;
- RBA's Responsible Minerals Initiative ("RMI") offers a grievance mechanism specifically related to mine and smelter activities including their workers, accessible via the RMI website.

The above mentioned RBA grievance channels are intended to allow workers and whistleblowers to use them anonymously and include the protection of individuals that use these channels against retaliation. Whistleblowers are to be informed of the timeline for feedback review and of the status of the assessment and/or internal investigation. The RBA grievance channels provide feedback tracking.

3.4.4.2.F. Taking action on material impacts on supply chain workers, and approaches to managing material risks and pursuing material opportunities related to supply chain workers, and effectiveness of those actions

As part of our responsible supply chain program, which is drawn from the OECD Guidelines for Multinational Enterprises, we take actions that seek to identify, prevent, mitigate and account for how we address material negative impact on suppliers' workers including those due to human rights violation, including child labor and forced labor, and to manage related material risks for ST. All actions are continuous and ongoing to reach the objectives and targets set in connection with related policies.

Risk assessment

Before onboarding a supplier we perform a risk evaluation, which includes forced labor, and annually we carry out a risk assessment of all tier one suppliers based on criteria such as their business activity and location, utilizing internal and external available data bases. Such an assessment can result in a decision by ST to temporarily suspend or cease the business relationship with a high risk supplier. This could be, for example, a supplier who does not agree to commit to ST labor standards, or a supplier at high risk, not willing to close its corrective action plan and for which the risk is consequently not mitigated.

Supply chain due diligence program

Based on this annual risk assessment we identify our suppliers at risk in terms of sustainability, including human rights. In order to manage these, we deploy the RBA due diligence program made up of three steps:

- commitment letter: the suppliers at high risk sign a supply chain responsibility commitment letter, agreeing to comply with the RBA Code of Conduct, to complete self-assessment questionnaires, to accept RBA second- or third-party audits and to close main non-conformances within a predefined timeline.
- self-assessment questionnaire: the suppliers at high risk complete a RBA self-assessment questionnaire, which results enable us to identify areas that require attention.
- RBA-based audit and non-conformance closure: the suppliers at high risk receive a third-party RBA validated audit process audit or a second-party RBA-based audit according to their profile, valid for two years, to monitor and control compliance with the RBA Code of Conduct. They shall address areas of non-compliance, that are detailed in the audit report, with corrective actions, that should be closed in a predefined timeline according to finding severity. Extensions may be granted where appropriate to allow time to address the root causes of the non-conformances.

Effectiveness of these corrective actions and compliance with the RBA Code of Conduct is then verified through a closure audit or verification, which takes place no later than one year after the initial audit. If there are still findings, corrective actions and closure verification should be repeated until final closure.

We deploy the same due diligence methodology, when we receive a grievance via one of the channels as described above or any public alert on potential supplier harm including human rights violation.

Responsible mineral sourcing program

Regarding our responsible mineral sourcing program, we use a systematic approach to identify and monitor our due diligence. Since 2011 we are a member of RMI, which was founded by RBA and which addresses responsible mineral sourcing issues in respect of minerals from conflict-affected and high-risk areas, including with regard to human rights in our supply chain. We require our suppliers to use minerals originating from smelters that conform to the RMAP standard. We screen each new supplier, and new raw materials are systematically pre-assessed to determine whether it falls within the scope of our responsible minerals sourcing program. We are aiming to remove non-compliant smelters from our supply chain. We aim to request that every year, suppliers complete a questionnaire on our requirements, enabling us to evaluate their maturity and their willingness to carry out due diligence. Additionally, suppliers are required to provide us with their updated CMRT. In case of changes in the supply chain, suppliers are expected to notify us within two weeks and provide a compliant reporting template within ninety days.

Supplier performance management model

Sustainability performance is integrated into our supplier performance management model. ST experts evaluate regularly supplier overall performance on various domains, including sustainability, through

specific questions. When rated “unacceptable” on a question, the supplier is requested to set up a corrective action plan, that may include the completion of a remediation process related to forced labor (see Section 3.4.4.2.E. (*Workers in the supply chain - Processes to remediate negative impacts and channels for own workforce to raise concerns*)). If the supplier is unable or unwilling to meet these requirements, we may impose sanctions. These could include decreasing the supplier’s market share or terminating the contract.

Training

The deployment of our supply chain due diligence program is accompanied by trainings for suppliers and for our Global Procurement Organization, and Wafer Foundry Outsourcing and Global Outsourcing Business Management Departments. ST provides support and training to targeted suppliers to improve their sustainability performance when necessary. They may be trained on RBA standards but also on issues such as working hours, forced labor, child labor, ethics, health and safety, environment and management systems thanks to e-learnings, ST supplier days, webinars and in-person meetings.

In parallel, ST provides awareness and capability building to the above-mentioned ST departments to be able to support and influence suppliers on sustainability topics. In 2024, additionally to trainings on sustainability, our Global Procurement Organization received awareness training on public policy and on child and forced labor as well as on environmental topics.

Collaboration with industry peers and subject experts

We recognize the importance of collaboration and knowledge sharing with peers to advance labor and human rights practices. Our senior director of corporate social responsibility ("Corporate Social Responsibility" or "CSR") is a member of the board of directors of the RBA, a role which strengthens our longstanding collaboration. We are a member of *Entreprise pour les Droits de l'Homme*, a French business association for human rights, which membership allows us to share knowledge and best practices with peers and to raise awareness of the importance of human rights in the corporate world. ST responsible supply chain specialists are actively participating in business associations, alliances and networks.

Resources

Our Global Procurement Organization is the owner and accountable for the responsible supply chain program deployment, its outcomes and reporting, with specialists dedicated to the program, its operational deployment, follow-up, supplier support on, *inter alia*, sustainability matters and data as well as reporting. They support and coordinate also with outsourcing teams for the suppliers' due diligence.

3.4.4.2.G. Metrics and targets related to supply chain workers

3.4.4.2.G.1. Target related to workers in our supply chain (entity-specific)

In line with our efforts to have sustainable operations across our supply chain, our ambition is to apply a zero-tolerance approach for child and forced labor in our supply chain.

Conducting sustainability audits and requiring our suppliers to set up corrective action plans for any priority finding related to child and forced labor, can reduce the negative impact on workers in the supply chain by promoting ethical practices, improving working conditions, and encouraging compliance with labor standards. In accordance herewith, we have decided to take steps towards setting targets regarding our tier 1 suppliers (including our subcontractors) in relation to:

- conducting regular sustainability audits of tier one suppliers' facilities at high risk; and

- addressing priority findings (as defined by the RBA validated audit process standard) related to child and forced labor, through corrective action plans.

We are working toward finalizing baseline data and monitoring methodologies to enable us to adopt these targets and will report on progress in future reports.

We had previously set a target to conduct a regular risk assessment of our supply chain and audit 100% of our high-risk suppliers by 2025. This target is proposed to be renewed as referenced above.

3.4.4.3 Affected communities (S3)

Affected communities related IROs (SBM-3)

The following table lists the IROs related to affected communities we have identified and assessed as material in our 2024 DMA, including the programs or dedicated actions and (entity-specific) targets, we have in place to address such IROs.

S3 – Affected communities							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ¹ or inherent ² basis	ST response	Targets
Negative impact on local communities from absolute level of public / potable water usage in local water basin due to Company scale resulting in significant relative weight of ST water consumption	Negative impact	Actual	Own operations	Short term	Residual basis	ST's community engagement program	We aim to certify 100% of our manufacturing sites through the Alliance for Water Stewardship (AWS) by 2035 (entity-specific).
Negative impact on local communities from absolute level of public / potable water usage in local water basin of subcontractors resulting in significant relative weight of water consumption	Negative impact	Actual	Upstream	Short term	Residual basis	ST's community engagement program	No target in place

(1) "Residual" refers to the materiality assessment that takes into account existing mitigation measures.

(2) "Inherent" refers to the materiality assessment without taking into account any existing mitigation measures

3.4.4.3.A. Interests and views of stakeholders - affected communities

For our engagement with our affected communities reference is made to Section 3.4.2.3.B. (*Strategy - Interests and views of stakeholders*), in which affected communities have been indicated as being one of our key stakeholders, whose perspectives are taken into account when defining our material topics and IROs and as such influences our strategy.

Although our sites engage with affected communities, by amongst others, organizing various events and through various initiatives, we have not gathered a representative sample of their view and interests as part of the 2024 DMA stakeholder consultation. For the 2024 DMA we leveraged inputs from non-profit organizations and media coverage to embed the interests of our affected communities in the outcome of the stakeholder consultation.

3.4.4.3.B. Material impacts, risks and opportunities and their interaction with strategy and business model

The manufacturing of semiconductor devices is water intensive. Semiconductor manufacturing processes are increasingly complex and require an increasing volume of ultra-pure water for both front-end and back-end sites. Therefore, we have identified two material negative impacts related to water consumption, which are neither widespread or systemic, nor related to incidents or specific business relationships, but rather based on local specific circumstances:

- the first relates to ST's manufacturing sites. It highlights effects on local communities (i.e. those living or working around ST's manufacturing sites) deriving from ST's scale and usage of public and potable water in local water basin; and
- secondly, water consumption and related impacts on local communities also relate to subcontractors in our value chain which carry out the same manufacturing processes and activities as we do. Therefore, we have also identified a material negative impact on local communities (i.e. those living or working around our subcontractors' manufacturing sites) deriving from the activities of our subcontractors.

We recognize water-related challenges for our operations and the semiconductor industry as a whole and continue to strengthen our efforts to address them, embedding water related goals in our strategy.

All affected communities who are likely to be materially impacted by us, are included in the scope of the disclosure under Section 3.4.2.3.C. (*Strategy - Material impacts, risks and opportunities and their interaction with strategy and business model*).

3.4.4.3.C. Policies related to affected communities

ST's ambition is to manage its business operations responsibly within the communities where it operates. We strive to make responsible use of shared natural resources, such as water, and aim to minimize any negative impact from our operations on local affected communities, through careful water management and partnerships. With regard to addressing the above mentioned negative impact on water availability for local affected communities, our Global Water Policy details (i) our ambitions to manage water within our operations and (ii) our expectations towards our major subcontractors on water management. More details about our Global Water Policy are included in Section 3.4.3.3.A. (*Water - Processes to identify and assess material water-related impacts, risks and opportunities*).

We aim to demonstrate water conservation leadership and have aligned our policies and related targets with international standards, including the UN SDGs, RBA Code of Conduct and AWS standards. ST respects human rights to water access and sanitation at the workplace and throughout the supply chain, as well as water access rights for local affected communities. No cases of non-respect of the UNGPs, ILO Declaration or OECD Guidelines that involve affected communities have been reported in our own operations. ST is unaware of such cases being reported in its value chain.

We monitor compliance with our policy commitments through any concerns about non-compliance raised i.e. via the Ethics Hotline. Where we have caused or contributed to a material negative impact on affected communities, we take appropriate corrective steps, such as remedy, as relevant depending on the nature of the matter. We refer to Section 3.4.5.3.A. (*Business Conduct - Business conduct policies and corporate culture*) for more details about how we handle concerns received via our Ethics Hotline, including any appropriate steps to be taken.

We are certified for ISO 14001 and validated by EMAS, for amongst others our water management system. An overview of certified and validated sites is included in Appendix 11.8.

We also engage in dialogue with our stakeholders, including affected communities in which we operate, to understand their water-related challenges and expectations, and actively participate in industry best practice coalitions, such as the AWS. In line with the AWS international standard, we are committed to identifying and driving actions that manage our negative material impacts on affected communities.

In addressing the abovementioned negative impact related to our subcontractors operations, as per our Global Water Policy, we expect our subcontractors to comply with the RBA Code of Conduct, which we adopted as our supplier code of conduct, by working to reduce their use of natural resources and by seeking opportunities to conserve water. The RBA Code of Conduct requires water management participants (i) to implement a water management program that documents, characterizes, and monitors water resources, use and discharge; (ii) to seek opportunities to conserve water; and (iii) to control channels of contamination.

3.4.4.3.D. Processes for engaging with affected communities about impacts

We believe engagement with local affected communities is essential for working towards common goals and addressing water-related challenges. ST sites actively engage with affected communities in various ways and according to their specific needs and the local context. Depending on the local specificities, engagement can occur on a regular basis, but can also occur on an ad hoc basis linked to specific circumstances such as during projects, which execution might impact local affected communities. This can include local NGOs, community organizations or town hall events to address community concerns. These engagements, although not standardized across all sites, provide critical insights that inform our decisions and activities aimed at managing our impacts on water consumption effectively.

Our main manufacturing sites are ISO 14001 certified, underlining our commitment to continuous improvement in our environmental management systems. The standard provides a framework and structured processes for engaging with stakeholders, including those in affected communities. These processes aim to ensure that the perspectives of relevant parties are systematically considered in our decision-making processes, thereby enhancing our ability to manage and mitigate actual and potential impacts effectively.

ST is part of the AWS, which provides a best practice standard to guide water management. Gathering and understanding data on shared water challenges is a key component of the framework, involving significant engagement with local stakeholders. In accordance with the AWS standard, relevant ST sites develop processes for engaging the site's stakeholders, including affected communities, in an open and transparent manner regarding our impact.

Currently, we only focus on affected communities located in areas where our own operations are, and we are, in collaboration with our subcontractors, assessing how to organize adequate engagement with the affected communities of our subcontractors. In 2024 we performed a water management assessment during which we analyzed our impact on water associated with the operations of our main subcontractors. Based on this analysis we found that the majority of our subcontractors included in the reporting scope are ISO 14001 certified, which provides a framework and structured processes for engaging with stakeholders including those in affected communities.

At the end of 2024, we developed a structured stakeholder engagement approach, including engagement with affected communities, which is currently being deployed across relevant ST departments and sites.

The main principles of this commitment to structured stakeholder engagement, including with affected communities and their legitimate representatives, are described in the Stakeholder Engagement Policy which was published early 2025 on st.com.

Engagement with affected communities is led by individual sites. Site directors are, amongst others, responsible for ensuring that timely and appropriate engagement occurs with the affected communities located in areas where ST operates.

The most senior role in ST with operational responsibility for this engagement is the Central Construction, Facilities and Site Services Department, head of Central and Sites Services Director.

3.4.4.3.E. Processes to remediate negative impacts and channels for affected communities to raise concerns

Affected communities can raise concerns through our Ethics Hotline. Such concerns are handled through the process further described in Section 3.4.5.3.A. (*Business Conduct - Business conduct policies and corporate culture*). In its engagement with affected communities in specific cases, ST raises awareness of the Ethics Hotline which is available to employees and interested stakeholders on st.com.

In applying the RBA Code of Conduct as our supplier code of conduct, we support the availability of such channel to raise concerns via our suppliers and subcontractors. Further details are included in Section 3.4.4.2.E. (*Workers in the supply chain - Processes to remediate negative impacts and channels for own workforce to raise concerns*).

3.4.4.3.F. Taking action on material impacts on affected communities, and approaches to managing material risks and pursuing material opportunities related to affected communities, and effectiveness of those actions

Corporate Water Program

We recognize our responsibility for water-related challenges wherever we operate and continue to strengthen our efforts to address these challenges. Water is a shared natural resource. We strive to prevent or mitigate material negative impacts on affected communities related to our water consumption. Our Corporate Water Program is deployed at all our manufacturing sites and aims to minimize our water footprint and monitor water-related risks. We collaborate externally to promote effective water management, taking into consideration our actual and potential impacts on local communities who may be affected by our operations. In 2024, no severe human rights (based on scale, scope and irremediability of the impact) issues or incidents connected to affected communities were reported (although ST notes that severe human rights issues or incidents connected to affected communities is not related to a material sustainability matter for ST). Full details of our actions related to water management can be found in Section 3.4.3.3.C. (*Water - Actions and resources related to water*).

Water management system

Our main manufacturing and relevant non-manufacturing sites are ISO 14001 certified and EMAS validated. As part of this certification, we track and evaluate the effectiveness of actions taken and we are audited annually by a third-party. Every main manufacturing and non-manufacturing site has established a range of environmental indicators to measure the effectiveness of our management systems and assess if we are achieving the expected outcomes. Performance is measured, monitored, and evaluated at both site and corporate level. As part of this process, we assess the effectiveness of operational controls and consider if modifications or new controls are needed. Our environmental indicators are also designed to measure the effectiveness of corrective action plans. We engage with a variety of stakeholders as part of

the ISO 14001 certification standard, including our affected communities, to understand the effectiveness of our systems to manage impacts.

Subcontractors

To manage the identified material impact of our subcontractors on the water availability for local affected communities, our teams maintain regular contact with our subcontractors to reinforce our expectation to apply water-related strategies and management systems as stated in our Global Water Policy. By applying the RBA Code of Conduct as our supplier code of conduct our subcontractors are expected to have a water management system in place, to, *inter alia*, manage water consumption.

Specific projects

We approach projects with careful consideration, each in their own context, taking into account potential impact on local affected communities. For example: as part of the expansion of our site in Crolles, France, the site conducted thorough research to understand and communicate our impacts in areas such as noise and water. A public consultation was held to present the project, allowing local affected communities to understand the expansion and voice any potential concerns. A dedicated project website was established, allowing local affected communities to ask questions and to provide feedback. The project aims to conform with local, environmental, and industrial regulations.

Tracking effectiveness

Our independent Ethics Hotline is available to third parties, including affected communities. All reported cases are handled and tracked to closure in accordance with our Speak-up Policy which is available at st.com for everybody, including to potentially affected stakeholders and stakeholders who need to help implement it.

At site level, managers may hold public meetings in our local communities when necessary. Any information related to negative impacts is carefully considered and used to inform our decision making and processes and program development.

We aim to reduce and track any impact from our operations on local affected communities through management and partnerships. As part of our Corporate Water Program, we create a water roadmap for our front and back-end manufacturing sites, with dedicated water champions to help implement actions.

Engagement with affected communities takes place via the AWS as well, as further described in Section 3.4.3.3 B. (*Water - Policies related to water*) above.

Resources

Sustainability matters that impact affected communities are managed by specialists within Corporate Sustainability, which includes people with relevant knowledge on water management. At our major manufacturing sites, site managers are accountable for local compliance with our Global Water Policy and the Central Construction, Facilities and Site Services Department is responsible for supporting its deployment and aligning with relevant (local) regulatory standards. Our sites also have local sustainability champions who support the implementation of sustainability programs, including managing impact on affected communities.

External stakeholder engagement and the water action plans are managed by the water champion and environmental manager of the site. Actions are managed at site level, as described above and in Section 3.4.3.3.C. (*Water - Actions and resources related to water*) above.

All actions are continuous and ongoing to reach the objectives and targets set in connection with related policies.

3.4.4.3.G. Metrics and targets related to affected communities

Target - related to affected communities - AWS certification (entity-specific)

Water is essential to people, life and business. Population growth and climate change make it increasingly important to protect this shared natural resource, particularly in regions experiencing water stress.

We are committed to managing our water use in our manufacturing processes responsibly and sustainably, minimizing our impact on water resources. As part of our sustainability program we are committed to engage with our stakeholders, including the communities located in the areas where we operate and which may be affected by our operations.

Therefore, in 2024 we set an entity-specific target to achieve AWS certification for 100% of ST's fourteen main manufacturing sites and one EWS site (as detailed in the table included in Appendix 11.9.) by 2035. This AWS certification target is aimed at supporting our efforts to mitigate negative impacts on local communities by ensuring our sites meet the highest standards of water stewardship.

The AWS is a global membership-based network of businesses, NGOs and the public sector. The AWS international standard provides a globally applicable framework for major water users to understand their water use and impacts, and to work collaboratively and transparently for sustainable water management within a catchment context. The AWS certification process requires a thorough understanding of relevant stakeholders, their water-related challenges, and the site's ability to influence beyond its immediate operations. The AWS framework includes independent third-party certification. The AWS certification emphasizes stakeholder engagement.

The base year for this target is 2024. As of December 31, 2024, we have received our first AWS certification for one our manufacturing sites. We will track our progress on a quarterly basis and monitor our sites' compliance with the AWS certification requirements.

The target contributes to:

- UN SDG 6 Clean water and sanitation: The primary focus of AWS certification is on ensuring sustainable water management and access to clean water and sanitation for all. It promotes efficient water use, water quality, and the protection of water-related ecosystems;
- UN SDG 3 Good health and well-being: By ensuring access to clean water and improving water quality, AWS certification contributes to better health outcomes;
- UN SDG 12 Responsible consumption and production: AWS certification encourages responsible water consumption and production practices, promoting sustainable management of water resources.

3.4.5 Business conduct (Governance - G1)

Approach

We aim to manage our business operations in an ethically responsible way. Conducting business with the highest ethical standards is a priority for ST as laid down in our Code of Conduct.

Policy

Our Code of Conduct and its addendum sets forth the Company's values and provides clear guidelines and expectations on how business is to be conducted at ST, to foster a culture of integrity. ST has also set

policies related to anti-bribery, anti-corruption, and whistleblowing: ST's Anti-bribery and Corruption Policy, ST's Conflict of Interest Policy and ST's Speak-up Policy.

These policies are applied at global level and applicable to all ST entities and all ST employees. For an overview of the relevant key elements of these policies please refer to the policy overview table in Appendix 11.7.

Governance

Please refer to Appendix 11.7 for an overview of the function responsible for implementation of the policies.

Availability of policies

ST's Code of Conduct and its Addendum, ST's Anti-bribery and Corruption Policy, Policy and ST's Speak-up Policy are available on st.com for everybody, including to potentially affected stakeholders and stakeholders who need to help implement it. Moreover, all ST's procedures implementing the commitments of these policies are available to ST's employees via ST's internal platforms.

Business conduct related IROs (G1)

The following table lists the IROs related to business conduct we have identified and assessed as material in our 2024 DMA, including the programs or dedicated actions, we have in place to address such IROs.

G1 – Governance							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ¹ or inherent ² basis	ST response	Targets
Risk of not being alerted or informed of situations / allegations / matters from own workforce that would require an assessment or investigation, which would expose the Company to reputational, financial and other liabilities	Risk	Potential	Own operations	Long term	Inherent basis	ST's whistleblowing program	No target in place
Risk of non-compliance with applicable anti-corruption / anti-bribery rules, which would expose the Company to reputational, financial and other liabilities	Risk	Potential	Own operations	Long term	Inherent basis	ST's anti-bribery and anti-corruption program	No target in place

(1) "Residual" refers to the materiality assessment that takes into account existing mitigation measures.

(2) "Inherent" refers to the materiality assessment without taking into account any existing mitigation measures

3.4.5.1 The role of the administrative, management and supervisory bodies

The role of our administrative, management and supervisory bodies related to business conduct is to promote business integrity by leading by example. They reinforce that ST is committed to conducting business with the highest standards of integrity and in compliance with applicable laws, wherever ST operates, as set forth in ST's Code of Conduct and to encourage reporting of behavior considered to be contrary to the principles laid down in ST's Code of Conduct. The commitment of our President and Chief Executive Officer to the principles of business conduct is, amongst others, evidenced by his signature of the introduction of the Code of Conduct.

The members of our administrative, management and supervisory bodies are regularly informed and/or trained by our Chief Compliance & Ethics Officer ("Chief Compliance & Ethics Officer" or "CCO") on business conduct matters as part of the Corporate Compliance, Ethics & Privacy program, such as: bribery and corruption, conflict of interest, gifts / entertainment, insider trading, discrimination and harassment and privacy. The content of such informative or training sessions is adapted based on the audience.

3.4.5.2 Description of the processes to identify and assess material impacts, risks and opportunities

Regarding business conduct, we have identified two material potential risks that refer to our own operations in all geographical areas where ST has a presence:

- whistle-blowing: we recognize the importance of being alerted of situations, allegations or matters from own workforce in order to be able to conduct related assessment or investigation. Due to the mitigating measures and programs already in place the risk of not being alerted or informed has been assessed material on an inherent basis only;
- bribery and corruption: we recognize the importance of complying with applicable anti-bribery and anti-corruption rules. Therefore, we have assessed that a non-compliance might occur on an inherent basis only, without considering the mitigating measures already in place at ST.

These risks have been identified based on internal stakeholder engagement, review of our whistleblowing records and our compliance systems.

3.4.5.3 Business conduct

3.4.5.3.A. Business conduct policies and corporate culture

The corporate culture and business conduct applied at ST is a structured framework based on three pillars: prevention, detection and correction. As set forth in our Code of Conduct, we are committed to conducting business with the highest standards of integrity and in compliance with applicable laws and regulations, wherever we operate. The introduction of our Code of Conduct is signed by our President and Chief Executive Officer and provides clear guidelines and expectations on how business is to be conducted at ST, to foster a culture of integrity.

Our corporate culture is defined in our Code of Conduct and its addendum, which are translated in the ten most spoken languages within the ST group: French, Italian, English, German, Arabic, Chinese, Korean, Japanese, Malay, and Portuguese. Our Code of Conduct applies to all ST entities and all ST employees, is available on st.com for everybody, including to potentially affected stakeholders and stakeholders who need to help implement it, and its implementation is overseen by our Chief Compliance & Ethics Officer. It concerns the following main elements:

- ST's Code of Conduct sets forth the Company's values and expectations for conducting business with the highest standards of integrity, wherever it operates;
- ST's Addendum to the Code of Conduct focuses on the prevention and detection of the risks of corruption (including influence peddling and the prohibition of facilitation payments), provides practical examples as well as tips.

When entering a business relationship with a stakeholder, we ensure this counterpart is aligned and has similar standards as set in our Code of Conduct.

The established policies and procedures regarding business conduct and corporate culture, the implementation of which is overseen by our Chief Compliance & Ethics Officer (where it regards the Speak-up Policy: jointly with the Chief Audit & Risk Executive; and where it regards the Insider Trading Policy, jointly with the General Counsel), apply to ST and all ST employees, and are designed to prevent and mitigate risks with regards to *inter alia* to anti-bribery, anti-corruption, and whistleblowing:

- ST's Anti-Bribery and Corruption Policy (the "Anti-Bribery and Corruption Policy"), which sets forth a zero-tolerance policy towards any form of corruption, regardless of the identity or position of the originator or recipient of any bribe. It is strictly forbidden for anybody in ST to use ST funds or assets to make a political contribution. The policy is consistent with the UN Convention against Corruption. Our Anti-Bribery and Corruption Policy and Addendum are on st.com, available to all employees and interested stakeholders, and provide clear definitions regarding instances of bribery and corruption and include detailed descriptions of ST's rules for engaging with third parties.
- ST Conflict of Interest Policy, which provides a framework for the transparent reporting and management of any potential conflicts of interest. The policy requires all ST employees, regardless of the identity or position, to behave in the interests of ST. As a matter of integrity and transparency, all ST employees are expected to identify and disclose any actual, perceived or even potential situations of conflict between their personal interest and the interest of ST and recuse themselves from any decision-making process regarding the relevant situation. The policy is available on our intranet.
- Speak-up Policy, which includes information on ST Ethics Hotline available via our website st.com to all, including to ST employees and interested third parties, and to stakeholders who need to help implement it, to report concerns of misconduct, relating to perceived or actual risks and to remediate any situation that may deviate from expectations (our "Speak-up Policy"). Any ST employee or any other interested third-party who observe a conduct that seems to (or does) violate or deviate from the values and principles set forth in ST's Code of Conduct, policies, procedures and/or applicable laws, are encouraged and expected to raise the issue and speak up. The policy applies to all reported concerns worldwide, as well as related assessments and investigations in relation thereof.
- Third-party due diligence procedure, which provides a general framework and guidance for the assessment of ethical, compliance, regulatory and reputational risks of third parties doing or seeking to do business with ST. The policy is available on our intranet.
- Insider Trading Policy, which aims at preventing the unlawful use of non-public material information by ST employees (the "Insider Trading Policy"). The policy applies to the members of our Supervisory Board and Managing Board, and is available on our intranet.
- Donation, Fundraising and Sponsorship procedure, which provides a general framework and guidance concerning the selection, evaluation, authorization, monitoring and reporting of any donations, fundraising and sponsorships carried out from time to time by or on behalf of ST or which are endorsed by ST. The procedure is available on our intranet.

Identifying, reporting and investigating of concerns

Speak-up and reporting of concerns

Maintaining a culture of transparency and ethical behavior is crucial to our success. Therefore, we encourage our employees and other internal and external stakeholders to speak-up and report any concerns they might have.

As per our Speak-up Policy, concerns can be reported via:

- the Ethics Hotline
- the Chief Compliance and Ethics Officer and/or the Chief Audit and Risk Executive
- selected managers (such as country manager, site manager and/or regional / country or site Human Resources manager).

All concerns are processed through the Ethics Hotline, including concerns reported to the Chief Compliance and Ethics Officer and Chief Audit and Risk Executive and selected managers. The Ethics Hotline is our reporting mechanism tool enabling any ST employee and any other internal or external stakeholders to report a concern, including incidents of bribery and corruption.

The Ethics Hotline is the mechanism through which we are able to identify and investigate concerns about unlawful behavior or behavior allegedly in contradiction with our Code of Conduct, policies and procedures, including incidents of bribery and corruption. The Ethics Hotline:

- is hosted by an independent qualified third-party, which is a global whistleblowing solution provider, on behalf of ST.
- is accessible online or by phone to everybody, including ST employees and any other internal or external stakeholders.
- is available 24/7 in more than 30 languages.
- allows for the reporting of all concerns, ensuring confidentiality and, whenever required, anonymity.
- is managed in accordance with the GDPR, ensuring that information reported is treated confidentially and securely.

Concerns raised are managed by dedicated and independent departments. Our departments in charge of the management of the Ethics Hotline are our Compliance, Ethics and Privacy Department and our Corporate Audit Department. The governance regarding the management of the Ethics Hotline and handling of incoming concerns ensures independence and transparency of the departments in charge.

The Speak-up Policy outlines how ST employees and any other internal or external stakeholder may report concerns and by whom those concerns will be handled. Each concern received is taken seriously and triggers the opening of a case and related assessment and/or investigation. All parties involved in an assessment and/or investigation of a case are protected from retaliation.

Once a concern is raised, an evaluation of the situation is made to determine the department, which will assess and/or investigate the reported situation. Only ST employees, who are duly authorized by the Chief Compliance and Ethics Officer and/or the Chief Audit and Risk Executive, conduct any form of assessment or investigation steps in relation to any concern(s). The investigation of a case is allocated by the Chief Compliance and Ethics Officer and/or the Chief Audit and Risk Executive after reviewing the situation and determining the parties involved, to ensure the verifications are performed by parties who are independent to the reported situation. For business incidents relating to bribery and corruption, one of the two departments in charge of the Ethics Hotline, based on the Speak-up Policy, either the Chief Compliance and Ethics Officer or the Chief Audit and Risk Executive, will be in charge of the verifications to take place.

The Ethics Hotline operator promptly notifies the Chief Compliance and Ethics Officer and the Chief Audit and Risk Executive of a received concern.

The process of how such concern is managed is outlined by the Speak-up Policy and involves:

- acknowledgement of receipt of the reported concern(s) to the whistleblower/reporter within 7 days following such report; and
- the receipt of a concern triggers the opening of a case to be assessed and it is determined whether immediate protective mechanisms need to be undertaken. The assessment will determine whether an internal investigation is needed. The results of an assessment and/or internal investigation are documented in writing, including findings and related conclusions. Recommendations on actions to be taken in relation to this concern can be issued by the investigative team to the ultimate decision maker.

Reported concerns - Incidents, complaints and severe human rights impacts (S1-17)

In 2024, a total of 376 concerns were filed through the available channels for the people in ST's own workforce. From the previous reporting year (i.e. 2023) 77 cases were still under review and carried over to the reporting year 2024. On December 31, 2024, there were 50 cases still under review. The outcome of these cases will be reported on in our next annual report. The table below provides more detailed information.

	December 31, 2024
Number of cases under review as of January 1st	77
Number of complaints filed through channels for people in own workforce to raise concerns during the year	376
Total number of incidents reported as discrimination (including harassment)	48
Number of severe human rights incidents connected to own workforce	0
Number of cases of non-respect of the UN Guiding Principles on Business and Human Rights	0
Number of cases of non-respect of the ILO Declaration on Fundamental Principles and Rights at Work	0
Number of cases of non-respect of the OECD Guidelines for Multinational Enterprises	0
Number of cases still under review as of December 31st	50

In 2024, 48 incidents containing the words “harassment” or “discrimination” were reported. Of these, 32 were unconfirmed, 8 remained under assessment as of December 31, 2024, and 8 were confirmed as harassment or discrimination, leading to appropriate actions. This covers work-related incidents reported as discrimination on the grounds of gender, racial or ethnic origin, nationality, religion or belief, disability, age, sexual orientation, involving internal and/or external stakeholders across ST's operations in the reporting period. This also includes incidents of harassment as a specific form of discrimination. These incidents can be reported via the channels described previously.

No severe human rights incidents connected to ST's own workforce were reported in 2024 and consequently there was no incident representing case of non-respect of the UN Guiding Principles on Business and Human Rights neither of non-respect of the ILO Declaration of Fundamental Principles and Rights at Work nor of non-respect of the OECD Guidelines for Multinational Enterprises.

Severe human rights incidents include instances of lawsuits, formal complaints through ST or third- party complaint mechanisms, serious allegations in public reports or the media, where these are connected to the ST's own workforce. It also includes the fact of the incidents is not disputed by ST, as well as any other severe impacts of which ST is aware.

There were no fines, penalties and compensation for damages as a result of the incidents and complaints disclosed above.

No retaliation

We reject any form of retaliation against anybody, including whistleblowers or witnesses, reporting or taking part in the assessment of reported concerns. A strict non-retaliation policy is included in our Code of Conduct and in our Speak-up Policy. We have monitoring mechanisms and measures in place with regard to our non-retaliation policy. Any suspicion of retaliation is promptly investigated, and appropriate disciplinary actions may be taken to maintain a safe and supportive environment for all employees, based on the results of the investigation. We are subject to the EU Whistleblowing Directive and apply this directive to the ST group worldwide as described in our Speak-up Policy.

Training on business conduct – raising awareness

ST employees are trained on ST's Code of Conduct, either onsite or online. This training is mandatory upon hiring for each employee. Annual refreshers of this training are deployed.

Additional trainings on various specific business conduct topics are provided via e-learnings and in person sessions. Topics may include, but are not limited to, ST's Code of Conduct, conflict of interests, anti-bribery and corruption, harassment and discrimination and data privacy. All e-learnings regarding business conduct are available in various languages.

Furthermore, internal guidance and practical information on business conduct matters are provided via various ST communication channels, such as our website st.com, an intranet site, a dedicated mobile application and onsite visuals.

Specifically, regarding incidents of bribery and corruption

The prevention of incidents of bribery and corruption is organized through proactive communication, awareness and training programs. The compliance, ethics and privacy training, communication and awareness program, includes a mix of in-person and online sessions on anti-bribery and corruption, coupled with quizzes and awareness content posted on our internal channels. This program is regularly updated based on various criteria, such as the evolution of our bribery and corruption risk mapping and any organizational changes, auditing and monitoring results, and internal alerts received.

	At-risk functions	Managers from at risk function	Administrative, management and supervisory bodies			Other own workers
			Executives	Corporate staff	Supervisory body (Board)	
Training coverage						
Total (FTE)	1,229	408	8	22	9	24,697
Total receiving training	904	288	8	22	9	16,965
Percentage receiving training	74%	71%	100%	100%	100%	69%
Delivery method and duration						
Classroom training in hours	-	-	0.5	0.5	0.5	-
Computer-based training in hour						
Voluntary computer-based training in hour	0.5	0.5	-	-	-	0.5
How often training is required	<i>Every 2 years</i>	<i>Every 2 years</i>	<i>Annually</i>	<i>Annually</i>	<i>Annually</i>	<i>Every 2 years</i>

In this reporting year, 74% of functions-at-risk were covered by training programs. 100% of members of the administrative, management and supervisory bodies were covered and trained on prevention and corruption and bribery.

'Functions-at-risk' means those functions deemed to be at risk of corruption and bribery as a result of its tasks and responsibilities. Other own workers category represents workers except ST operators (i.e. working in manufacturing operations). Most exposed functions are identified based, for example but without limitation, on the nature of the job, the exposure to third parties, the concerned transactions, their interactions with third parties' business partners, the business location, etc.

The trainings are held annually for ST administrative, management and supervisory bodies. They must be executed every two years for at risk-functions and managers in at-risk functions, as well as for other ST employees. Training programs are deployed on a two-year rolling basis with the objective to address the entire targeted population over this two-year period.

The Refresher Code of Conduct training (incl. ABC) is a computer-based training, divided in micro modules with the ambition to be deployed bi-annually. A learner will have to review the full content of the Code (part of the CE&P program) within a period of 2 years. In addition, specific longer formats, also computer-based, are available to all employees including top management (Executives and Corporate staff) at any time. Those longer formats are not mandatory.

The content of the training includes:

- definition of corruption and bribery;
- ST policy related to corruption and bribery;
- case studies to practice prevention and detection of corruption or bribery; and
- testing to confirm knowledge from learners.

3.4.5.3.B. Prevention and detection of corruption and bribery

Prevention, detection and addressing

Prevention of bribery and corruption is achieved through multiple channels:

- third-parties are subject to specific business integrity due diligence before ST initiates any business dealings with them;
- employees and third-parties are informed and trained to be able to recognize possible bribery and corruption situations and to take appropriate action;
- the Ethics Hotline is made available to everyone, including all employees and third parties; and
- risk mapping, targeting bribery and corruption risk, is performed annually on a global basis and locally, as required by local laws.

Detection of bribery and corruption is achieved through multiple channels:

- ST receives reports of potential misconduct through the Ethics Hotline and proceeds to assess and/or investigate the reported matters; and
- the internal control activities, both monitoring and auditing, verifies the effectiveness of the anti-bribery and anti-corruption measures put in place by ST.

Addressing concerns and correcting incidents

In Section 3.4.5.3.A. above (*Business conduct - Business conduct policies and corporate culture*) a description is included of how we address concerns raised through the Ethics Hotline (as defined in ST's Code of Conduct).

Bribery and corruption incidents are addressed through ST's disciplinary system. The disciplinary system is made up of the measures that ST reserves the right to impose when it ascertains misconduct, which include failure to comply with the disciplinary rules set out in ST's Code of Conduct, its Addendum, the policies, the procedures as well as anti-bribery and anti-corruption laws and regulations applicable to ST. The disciplinary sanctions are proportionate to the misconduct and are applied following the conclusion of a disciplinary procedure as required in the relevant country.

Ensuring independent process

In addition to the general governance structure of the management of the Ethics Hotline, relevant precautions are taken to ensure independent processing of a concern as described in Section 3.4.5.3.A. (*Business conduct - Business conduct policies and corporate culture - Speak up and reporting of concerns*) above.

Reporting to management and supervisory body

The Company collects and tracks information from the Ethics Hotline to periodically analyze, report on and address any patterns of misconduct. Such analysis and reporting are always conducted in a manner that preserves the confidentiality of the reports received and of the investigations carried out and protects the people involved and maintains security and confidentiality of the information collected.

Reporting to Executive Committee and Supervisory Board on specific instances takes place only where there is a specific need to know in order to address the root causes and/or the consequences of a misconduct; such reporting preserves in any case, to the maximum extent permissible, the confidentiality of the reporting, of the people involved in the investigation and of its outcome, as well as the information collected during the course of the investigations, which are treated in a secured manner.

3.4.5.3.C. Metrics related to corruption and bribery

Incidents of corruption or bribery (G1-4)

	December 31, 2024
Number of convictions for violation of anti-corruption and anti-bribery laws	0
Amount of fines for violation of anti-corruption and anti-bribery laws (monetary)	0

In this reporting year, there were no conviction nor fines for violation of anti-corruption and anti-bribery laws. As such, there was no specific action that had to be taken to address breaches in procedures and standards of anti-corruption and anti-bribery in that regard.

4. Report of the Supervisory Board

The supervision of the policies and actions of our Managing Board is entrusted to our Supervisory Board, which, in a two-tier corporate structure under Dutch law, is a separate body and fully independent from our Managing Board. In fulfilling their duties under Dutch law, our Supervisory Board members serve the best interests of ST and its business, taking into consideration the interests of all ST shareholders and other stakeholders.

Our Supervisory Board supervises, monitors and advises our Managing Board in performing its management tasks and setting the direction of our affairs and business, including with regard to the Company's strategy for sustainable long term value creation and the implementation thereof, the Company's risk culture, risk appetite, and main risks associated with the strategy. Among other matters our Supervisory Board supervises the structure and management of systems of internal business controls, risk management, strategy and the financial and non-financial reporting process. In addition, it determines the remuneration of the members of the Managing Board within the remuneration policy adopted by the General Meeting of Shareholders.

The members of our Supervisory Board are carefully selected based on their combined experience, expertise, knowledge, as well as the business in which we operate. Our Supervisory Board is empowered to recommend to the general meeting of shareholders, people to be appointed as members of our Supervisory Board and our Managing Board.

In performing its duties, our Supervisory Board is advised and assisted by the following committees: the strategic committee (the "Strategic Committee"), the Audit Committee, the compensation committee (the "Compensation Committee"), the nominating and corporate governance committee (the "Nominating and Corporate Governance Committee") and the Sustainability Committee. The committees all report to our Supervisory Board. Only members of the Supervisory Board can be committee members.

Our Supervisory Board has determined, based on the evaluation of an ad-hoc committee, the following independence criteria for its members: Supervisory Board members must not have any material relationship with STMicroelectronics N.V., or any of its consolidated subsidiaries, or its management. A "material relationship" can include commercial, industrial, banking, consulting, legal, accounting, charitable and familial relationships, among others, but does not include a relationship with direct or indirect shareholders. As a result, we have deviated from the independence criteria as included in best practice provision 2.1.8 of the Dutch Corporate Governance Code, specifically item vii. of this best practice provision, which states that a supervisory board member is not independent if he/she (or his/her registered partner or other life companion, foster child or relative by blood or marriage up to the second degree as defined under Dutch law) is a member of the management board — or is a representative in some other way — of a legal entity which holds at least 10% of our shares, unless such entity is a member of our Group. Our independence criteria however comply with corporate governance listing standards of the New York Stock Exchange.

Our Supervisory Board also adopted specific criteria to assess the independence of its members, which can be found in Annex A to the Supervisory Board charter as available on investors.st.com/supervisoryboardcharter. On that basis, our Supervisory Board concluded that all members qualify as independent based on the criteria set forth above.

The Supervisory Board is pleased to report on its committees and its various activities in 2024.

4.1. Composition of the Supervisory Board

Our Supervisory Board advises our Managing Board and is responsible for supervising the policies pursued by our Managing Board, the manner in which the Managing Board implements the sustainable long-term value creation strategy and the general course of our affairs and business. In performing its duties, our Supervisory Board shall be guided by the interests of our Company and its business; it shall take into account the relevant interests of all stakeholders (including our shareholders). The Supervisory Board is responsible for the quality of its own performance.

Our Supervisory Board consists of such number of members as is resolved by our AGM upon a non-binding proposal of our Supervisory Board, with a minimum of six members. Decisions by our AGM concerning the number and the identity of our Supervisory Board members are taken by a simple majority of the votes cast at a meeting, provided quorum conditions are met.

Our Supervisory Board was composed of the following nine members as of December 31, 2024⁽¹⁾:

Name	Position	Year First Appointed	Term Expires	Nationality	Gender	Age
Nicolas Dufourcq	Chairman	2015	2027	French	Male	61
Maurizio Tamagnini ⁽²⁾	Vice Chairman	2014	2026	Italian	Male	59
Pascal Daloz ⁽¹⁾	Member	2024	2027	French	Male	59
Janet Davidson ⁽³⁾	Member	2013	2025	American	Female	68
Ana de Pro Gonzalo	Member	2020	2025	Spanish	Female	57
Frédéric Sanchez	Member	2017	2026	French	Male	64
Donatella Sciuto	Member	2022	2025	Italian	Female	62
Paolo Visca	Member	2023	2026	Italian	Male	63
Hélène Vletter-van Dort	Member	2023	2025	Dutch	Female	60

- (1) Mr. Yann Delabrière was a member of our Supervisory Board until May 22, 2024, on which date his term expired and on such date Mr. Pascal Daloz was appointed as a new member of the Supervisory Board.
- (2) Mr. Maurizio Tamagnini was a member of our Supervisory Board until his resignation on March 19, 2025.
- (3) On January 30, 2025, we announced that our Supervisory Board has agreed to propose for shareholders' approval at the Company's 2025 AGM, the appointment of Werner Lieberherr to the Supervisory Board in replacement of Janet Davidson, whose mandate will expire at the end of the 2025 AGM.

Resolutions of our Supervisory Board require the approval of at least three-quarters of its members in office, with each member being entitled to one vote. Our Supervisory Board must meet upon request by two or more of its members or by our Managing Board. Our Supervisory Board meets at least five times a year (and in 2024, our Supervisory Board met 9 times), including to approve our quarterly, semi-annual and annual accounts and their release. In 2024, the average attendance rate for the meetings of our Supervisory Board was 93.8%. Our Supervisory Board has adopted (i) a Supervisory Board charter, (ii) a profile for the Supervisory Board based on which proposed new members of the Supervisory Board are selected (both of which are available on our website (www.st.com)), (iii) a diversity policy for the composition of the Managing Board, the Executive Committee and the Supervisory Board, and (iv) a selection criteria and appointment procedure for the Supervisory Board and Managing Board members.

Our Supervisory Board may make a proposal to our AGM for the suspension or dismissal of one or more of its members. Each member of our Supervisory Board must resign no later than three years after

appointment, as described in our Articles of Association, but may be reappointed following the expiration of his/her term of office. Pursuant to Dutch law, there is no mandatory retirement age for members of our Supervisory Board. Members of the Supervisory Board may be suspended or dismissed by our AGM. Certain of our Supervisory Board members are proposed by and may retain certain relationships with our direct or indirect shareholders represented through our major shareholder.

Biographies

Nicolas Dufourcq has been a member of our Supervisory Board since May 2015 and currently serves as its chairman. He serves on our Supervisory Board's Compensation Committee, Strategic Committee, Sustainability Committee and Nominating and Corporate Governance Committee. Mr. Dufourcq is a graduate of Hautes Etudes Commerciales ("HEC") and Ecole Nationale d'Administration ("ENA"). He began his career at the French Ministry of Finance and Economics before joining the Ministry of Health and Social Affairs in 1992. In 1994, he joined France Telecom, where he created the multimedia division, before going on to chair Wanadoo, the firm's listed internet and yellow pages subsidiary. After joining the Capgemini Group in 2003, he was made responsible for the Central and Southern Europe region, successfully leading their financial turnaround. He was appointed Chief Financial Officer of the Capgemini Group and member of their Executive Committee in September 2004. In 2005, he was named Deputy Chief Executive Officer in charge of finance, risk management, IT, delivery, purchases and LEAN program and, in 2007, also in charge of the follow-up of the Capgemini Group's major contracts. On February 7, 2013, Mr. Dufourcq was appointed Chief Executive Officer of Bpifrance (Banque Publique d'Investissement). Mr. Dufourcq is also a member of the board of directors of Stellantis.

Maurizio Tamagnini was a member of our Supervisory Board from June 2014, and the Vice Chairman of our Supervisory Board since June 2023, in both instances up until his resignation in March 2025. He also served on our Supervisory Board's Nominating and Corporate Governance Committee, Sustainability Committee, Compensation Committee and Strategic Committee. Mr. Tamagnini is currently chief executive officer of FSI SGR S.p.A., an asset management company sponsored, until July 2022, by CDP SpA (with a 39% ownership), which is 82.7% controlled by the Italian government. FSI SGR S.p.A. manages "FSI I" and "FSI II", private equity closed-end funds with approximately €3 billion capital endowment, specialized on growth equity investments in Italian midmarket companies with development potential. He was, until April 2019, non-executive chairman of FSI Investimenti S.p.A., which is controlled 77% by CDP SpA. Until March 31, 2016, Mr. Tamagnini was Chief Executive Officer and Chairman of the Investment Committee of Fondo Strategico Italiano S.p.A. (now CDP Equity S.p.A.), an investment company controlled by CDP SpA. Until April 2016, he was Chairman of the joint venture between Fondo Strategico Italiano S.p.A. and Qatar Holding (IQ Made in Italy Investment Company S.p.A.) with capital endowment of up to €2 billion in total for investments in the food, brands, furniture and design and tourism sectors. He was previously Southern European Manager of the Corporate and Investments Banking division of Bank of America Merrill Lynch and a member of the Executive Committee of Bank of America Merrill Lynch for the EMEA region. Mr. Tamagnini has gained over 34 years of experience in the financial sector specializing in the areas of corporate finance, private equity, debt and equity. Mr. Tamagnini is also a member of the international advisory board of BIDMC Harvard Medical School and a board member of Tech Europe Foundation. He holds a degree in International Monetary Economics from Bocconi University in Milan and has also studied at the Rensselaer Polytechnic Institute — Troy in New York, USA.

Pascal Daloz has been a member of our Supervisory Board since May 2024. Pascal Daloz has been chief executive officer of Dassault Systèmes, world leader in virtual universes and a global top ten software company, since January 2024. Having acquired an extensive experience in strategy and technology innovation management with investment banks and consultancy firms, Pascal Daloz joined Dassault Systèmes in 2001 as vice president research, strategy and market development. He became vice president, strategy and business development (2003), executive vice president, strategy and marketing (2007), then executive vice president, corporate strategy and market development (2010), and then executive vice president, brands and corporate development (2014). In 2018, Mr. Daloz became head of corporate finance and strategy. Mr. Daloz was Dassault Systèmes' chief operating officer and

head of the operations executive committee from 2020 to 2023, and deputy chief executive officer in 2023, orchestrating the transformation of all strategic functions, with the aim for Dassault Systèmes to become the world leader in three key sectors of the economy: manufacturing industries, life sciences and healthcare, infrastructure and cities. He serves as chairman of MEDIDATA, world leader in clinical trials, and of 3DS OUTSCALE, the cloud services company founded by Dassault Systèmes. Mr. Daloz is an independent member of the board of directors of Sopra Steria. He is an alumnus from the Ecole des Mines de Paris, France.

Janet Davidson has been a member of our Supervisory Board since June 2013. She serves on our Supervisory Board's Audit Committee and Strategic Committee and chairs our Supervisory Board's Sustainability Committee. She began her career in 1979 as a member of the technical staff of Bell Laboratories, Lucent Technologies (as of 2006 Alcatel Lucent), and served from 1979 through 2011 in several key positions, most recently as chief strategy officer (2005 – 2006), chief compliance officer (2006 – 2008) and executive vice president quality and customer care (2008 – 2011). From 2005 through 2012, Ms. Davidson was a member of the Lehigh University board of trustees. In 2007 she served on the Riverside Symphonia board of trustees and in 2005 and 2006, Ms. Davidson was a member of the Liberty Science Center board of trustees. Ms. Davidson was a member of the board of the Alcatel Lucent Foundation from 2011 until 2014, and a member of the board of directors of Millicom from April 2016 until June 2020. Ms. Davidson is also a member of the board of the AES Corporation, since February 2019. Ms. Davidson is a graduate of the Georgia Institute of Technology (Georgia Tech), Atlanta, Georgia, United States of America, and Lehigh University, Bethlehem, Pennsylvania, United States of America, and holds a master's degree in Electrical Engineering.

Ana de Pro Gonzalo has been a member of our Supervisory Board since June 2020. She chairs our Supervisory Board's Audit Committee and serves on our Supervisory Board's Sustainability Committee. She has been an independent non-executive director for Mobico Group PLC (formerly National Express Group PLC) since October 2019 and a member of its audit committee and remuneration committee and she serves as independent non-executive director of Novartis A.G. and as a member of its audit and risk committees since March 2022. Until December 2020, she was chief financial officer of Amadeus IT Holding (a world leading technology provider and transaction processor for the global travel and tourism industry), with global responsibility for financial management and control for the Amadeus group. She was appointed in this role in February 2010 and was also a member of the Amadeus executive management team. From 2002 to 2010, Ms. De Pro Gonzalo was corporate general manager at Sacyr Vallehermoso and was instrumental in leading the international expansion of one of the major construction groups in the world. From 1994 to 2002, Ms. De Pro Gonzalo was deputy general manager and finance director at Metrovacesa, and from 1990 to 1994 she was a senior auditor at Arthur Andersen. She has been independent non-executive director for Merlin Properties, S.A. from 2015-2017 and for Indra Sistemas S.A. from 2020-2022. Since June 2019, Ms. De Pro Gonzalo is an independent member of the non-profit Global Steering Group for Impact Assessment (*Consejo Asesor Nacional Español*) and member of the board of trustees of foundation Juan XXIII for the people with special intellectual needs since October 2020. She has been appointed as of December 4, 2024, to the board of Gavi, the Vaccine Alliance, an international organization with the goal of increasing equitable and sustainable use of vaccines to save lives and protect people's health. Ms. De Pro Gonzalo holds a bachelors degree in business studies, specializing in auditing, from Universidad Complutense de Madrid, and completed IESE Business School's general management executive program.

Frédéric Sanchez has been a member of our Supervisory Board since June 2017. He chairs our Supervisory Board's Compensation Committee and serves also on our Supervisory Board's Audit Committee, Strategic Committee and Nominating and Corporate Governance Committee. Mr. Sanchez is the chairman of Fives' executive board, an industrial engineering group with heritage of over 200 years of engineering excellence and expertise. Fives designs and supplies machines, process equipment and production lines for the world's largest industrial groups in various sectors such as aluminium, steel, glass, automotive, logistics, aerospace, cement and energy, in both developing and developed countries. Mr. Sanchez started his career in 1985 with Renault in Mexico, then in the USA. In 1987 he became a mission manager at Ernst & Young. In 1990 he joined Fives-Lille group, in which he held various positions

before being appointed chief financial officer in 1994 and becoming chief operating officer in 1997. In 2002, the Compagnie de Fives-Lille (renamed Fives in 2007) became a company with a management and supervisory board chaired by Mr. Sanchez. In 2018, Fives became a French simplified joint stock company (*société par actions simplifiée*) and Mr. Sanchez its chairman and chief executive officer. Within MEDEF (French Business Confederation), Mr. Sanchez is president of MEDEF International, president of the council of entrepreneurs France-Japan, France-United Arab Emirates and France-Bahrain. Mr. Sanchez is an administrator of Orange, Thea and Bureau Veritas and he is honorary co-president of the Alliance Industrie du Futur. Mr. Sanchez graduated from HEC Business School (1983) and Sciences-Po Paris (1985) and he also holds a master degree in economics from Université Paris-Dauphine (1984).

Donatella Sciuto has been a member of our Supervisory Board since May 2022 and serves on our Supervisory Board's Audit Committee and Compensation Committee. Ms. Sciuto has been the executive vice rector of Politecnico di Milano since 2015 and is its executive rector since January 2023, and full professor in computer science and engineering (since 2000). She was appointed IEEE Fellow for her scientific contribution in the "embedded systems design". Ms. Sciuto has been a member of the governing board of the Bank of Italy, since 2013. She has been an independent member of the board of directors of Avio S.p.A (since 2017) and of Fila S.p.A. (since 2020). Ms. Sciuto has also been a member of the board of the Italian Institute of Technology since 2021 and she was a member of the supervisory board of the Human Technopole Foundation until May 2022 and a member of the board of directors of Rai Way S.p.A. until April 2023. Ms. Sciuto holds a degree in electronic engineering from Politecnico di Milano and a PhD in electrical and computer engineering from the University of Colorado, Boulder. She holds a masters degree in business and administration (CEGA) from the Bocconi University School of Business Management.

Paolo Visca has been a member of our Supervisory Board since May 24, 2023. He serves on our Supervisory Board's Strategic Committee and Nominating and Corporate Governance Committee. Mr. Visca retired in 2022 after gaining over 30 years of experience in the public sector during which he covered several senior positions, specializing in the areas of public investments, support to industrial projects manufacturing activities, public finance and relations with the European Union. He holds a master's degree in political science from the University of Rome. Mr. Visca was the head of the cabinet of the Italian Minister of Economic Development from February 2021 until July 2022. In this capacity he oversaw several initiatives aimed to attract and promote public and private investments in Italy in the areas of semiconductor, automotive, technological and manufacturing industries and to foster the Italian venture capital ecosystem. Previously, he held the position of chief of the cabinet of the vice president of the council of ministers of the Italian Republic (from June 2018 until February 2021) where he worked on several topics related to industrial and infrastructural investments. From November 2008 to June 2020, he held several positions within the Office of Relations with the European Union and the International Relations of the Italian Chamber of Deputies, being appointed as head in 2018. In this capacity he oversaw the relationship between the Republic of Italy and the European Union and other international organizations firstly with respect to the laws and projects requiring an EU clearance and more broadly supporting all the parliamentary activities in the international scenario. From February 2003 until November 2008, he was the head of the Italian office for "legislative coordination for the public finance area" and secretary of the commission for budgetary policies. From September 1996 until February 2003, he was the coordinator of the Italian Finance Department Task Force and from 2001, the head of office "coordination for the public finance area". Previously, he was the responsible of the committees for telecommunication and for foreign affairs within the Italian parliament. In addition, he served several times on the board of directors of the employees' of the chambers of deputies pension fund.

Helene Vletter-van Dort has been a member of our Supervisory Board since May 24, 2023. She chairs our Supervisory Board's Nominating and Corporate Governance Committee and serves on our Supervisory Board's Audit, Compensation and Sustainability Committees. Ms. Vletter-van Dort is a partner at De Bestuurskamer (since 2022) and a professor of financial law and governance at Erasmus School of Law, Rotterdam (since 2004). She holds a bachelors degree / masters in law degree in corporate and commercial law from the University of Leiden and a PhD from the Utrecht University. Ms. Vletter-van Dort has been the chairperson of the board of Intertrust NV from 2015 until 2022. She has

been a member of the board of Fortis Bank Netherlands (from 2008 until 2010) and member of its risk committee and remuneration committee. Ms. Vletter-van Dort has been a member of the board of the Dutch Central Bank and chair of its committee on supervisory policy (from 2010 until 2014). She has been a member of the Dutch Monitoring Committee Corporate Governance (from 2009 until 2018) and, from 2017 until 2019, a member of the board of Barclays Bank Plc and chair of its remuneration committee. From 2015 - 2023, Ms. Vletter-van Dort has been a member of the board of NN Group NV and, since 2019, vice-chair as well as chair of its remuneration committee. She is also a member of the board of the Dutch Foundation for Public Broadcasting, NPO (since 2020), Anthos Fund & Asset Management (since 2021) and Nyenrode Business University (since 2022) and serves on its audit committee and chairs its education and research committee. From 2018 - 2024, she was the chairperson of Stichting Luchtmans, protective foundation Koninklijke Brill NV, a 335-year old listed publisher.

4.2. Meetings and activities of the Supervisory Board

4.2.1. Activities of the Supervisory Board

Our Supervisory Board held 9 meetings in 2024, of which all were held in the presence of the members of the Managing Board and other select members of our Senior Management, with the exception of the evaluation of the functioning of our Managing Board, Supervisory Board, its committees and its individual members as described below.

The items discussed in those meetings included recurring subjects such as our annual budget, financial performance, annual report on Form 20-F as well as its statutory annual accounts, objectives and results, strategy and sustainable long-term value creation, operations review, reports of the various committees of our Supervisory Board, the convocation of our AGM, the risks of our business and the assessment by our Managing Board of the structure of our internal risk management and control systems, as well as any significant changes thereto, corporate governance requirements and developments and the compensation of the members of our Managing Board. Certain Supervisory Board meetings also included presentations by senior executive management. In 2024 the developments on CSRD and its implementation into Dutch national legislation have been closely monitored and the Company's preparations to become compliant have been discussed in the meetings of the Supervisory Board.

Outside the Supervisory Board meetings, the Chairman and other members of our Supervisory Board had regular contact with the members of our Managing Board, and other members of our Senior Management.

In accordance with the best practice provisions 2.2.6 and 2.2.7 of the Dutch Corporate Governance Code, on an annual basis our Supervisory Board undertakes to perform an evaluation of the functioning of the Managing Board and the Supervisory Board. Once every three years, this evaluation is conducted by an independent external advisor, whose mission is to assist the Supervisory Board in this evaluation through, among other things, conducting interviews with individual members of the Supervisory Board and Managing Board and facilitating discussions within the Supervisory Board on the functioning of the boards, and the Supervisory Board's committees, including an evaluation of the involvement of each member, the culture within the Supervisory Board and the relationship between the Supervisory Board and the Managing Board. The evaluation for the year ended December 31, 2024, was conducted with an independent third-party advisor. The evaluation was completed and its outcomes discussed at the meeting of the Supervisory Board held on January 29, 2025. The Supervisory Board concluded that the Supervisory Board and Managing Board, and their respective members, are functioning well. It also concluded that the Supervisory Board fulfills its responsibilities in terms of, among other things, performance monitoring, financial reporting, risk management and compliance. The Supervisory Board noted it is satisfied with the support it receives, as well as with the information that it receives, from the Managing Board, and that the work of the Supervisory Board's committees is appreciated. Certain major action points for 2025 are monitoring the ongoing challenging market conditions and the Company's performance therein, monitoring the Company's new global manufacturing reshaping and cost resizing programs and improving the Supervisory Board's access to global talent pools.

4.2.2. Membership and Attendance

As of December 31, 2024, the composition of the five standing committees of our Supervisory Board was as follows: (i) Ms. Ana de Pro Gonzalo is the Chair of the Audit Committee, and Ms. Janet Davidson, Mr. Frédéric Sanchez, Ms. Donatella Sciuto and Mrs. Hélène Vletter-van Dort are members of the Audit Committee; (ii) Mr. Frédéric Sanchez is the Chair of the Compensation Committee, and Mr. Nicolas Dufourcq, Ms. Donatella Sciuto, Mr. Maurizio Tamagnini and Mrs. Hélène Vletter-van Dort are members of the Compensation Committee; (iii) Mrs. Hélène Vletter-van Dort is the Chair of the Nominating and Corporate Governance Committee, and Messrs. Nicolas Dufourcq, Frédéric Sanchez, Maurizio Tamagnini and Paolo Visca are members of the Nominating and Corporate Governance Committee; (iv) Nicolas Dufourcq is the Chair of the Strategic Committee, and Ms. Janet Davidson, and Messrs. Frédéric Sanchez, Maurizio Tamagnini and Paolo Visca are members of the Strategic Committee; and (v) Ms. Janet Davidson is the Chair of the Sustainability Committee, and Mr. Nicolas Dufourcq, Ms. Ana de Pro Gonzalo, Mr. Maurizio Tamagnini and Mrs. Hélène Vletter-van Dort are members of the Sustainability Committee.

Detailed information on attendance at full Supervisory Board and Supervisory Board committee meetings during 2024 is as follows:

	Number of Meetings Attended in 2024	Supervisory Board	% Attendance	Audit Committee	% Attendance	Compensation Committee	% Attendance	Strategic Committee	% Attendance	Nominating and Corporate Governance Committee	% Attendance	Sustainability Committee	% Attendance
Nicolas Dufourcq	8	89 %	—	— %	2	100%	2	100%	4	100%	3	100%	
Maurizio Tamagnini ⁽²⁾	9	100 %	—	— %	2	100%	2	100%	4	100%	3	100%	
Pascal Daloz ⁽¹⁾	3	60%	—	— %	0	— %	—	— %	0	— %	—	— %	
Janet Davidson	9	100 %	10	100 %	0	— %	2	100%	0	— %	3	100%	
Yann Delabriere ⁽¹⁾	4	100 %	4	80 %	0	— %	0	— %	0	— %	0	— %	
Ana de Pro Gonzalo	8	89 %	10	100 %	—	— %	0	— %	0	— %	3	100%	
Frédéric Sanchez	9	100 %	5	100 %	2	100%	2	100%	4	100%	0	— %	
Donatella Sciuto	9	100 %	9	90 %	2	100%	—	— %	0	— %	0	— %	
Paolo Visca ⁽¹⁾	9	100 %	—	— %	—	— %	2	100%	4	100%	0	— %	
Hélène Vletter-van Dort ⁽¹⁾	9	100 %	10	100 %	2	100%	—	—	4	100%	2	1	

(1) Mr. Yann Delabriere was a member of our Supervisory Board until May 22, 2024, on which date his term expired and Mr. Pascal Daloz was appointed as new member of the Supervisory Board.

(2) Mr. Maurizio Tamagnini was a member of our Supervisory Board until his resignation on March 19, 2025.

4.3. Audit Committee

Our Audit Committee assists the Supervisory Board in fulfilling its oversight responsibilities relating to corporate accounting, reporting practices, and the quality and integrity of the financial and non-financial reports of the Company, as well as our auditing practices, legal and regulatory related risks, execution of our auditors' recommendations regarding corporate auditing rules and the independence of our external auditors.

Our Audit Committee met 10 times during 2024. At many of the Audit Committee's meetings, the committee received presentations on current financial and accounting issues and had the opportunity to discuss with our Chief Executive Officer, Chief Financial Officer, Chief Accountant, Chief Audit and Risk Executive, Legal Counsel, Chief Ethics and Compliance Officer (each as further detailed in Section 5.4. (*Managing Board - Executive Committee*)) and our external auditors. Our Audit Committee also proceeded with its annual review of our internal audit function. Our Audit Committee reviewed our annual consolidated financial statements in U.S. GAAP for the year ended December 31, 2024, and the results press release was published on January 30, 2025. Furthermore, our Audit Committee also reviewed our annual consolidated financial statements under IFRS, as adopted by the EU, for the year ended December 31, 2024. In 2024, the Audit Committee further monitored the non-financial reporting process, including the set-up of the Company's related internal control and risk management systems.

Our Audit Committee approved the compensation of our external auditors for 2024, reviewed and monitored their independence, and discussed the scope of their audit, audit related and non-audit related services for 2024.

Our Audit Committee regularly reviewed management's conclusions as to the effectiveness of internal control over financial reporting and supervised the implementation of our corporate ERM process.

As part of each of its quarterly meetings, our Audit Committee also reviewed our financial results as presented by management and whistleblowing reports, including independent investigative reports provided in relation thereto.

4.4. Compensation Committee

Our Compensation Committee advises our Supervisory Board in relation to the compensation of the members of the Supervisory Board and Managing Board, the variable portion of such compensation based on performance criteria recommended by our Compensation Committee. Our Compensation Committee also reviews the stock-based compensation plans for our Senior Management and key employees. Our Compensation Committee met twice in 2024.

Among its main activities, in 2024 our Compensation Committee: (i) reviewed the remuneration policy for the Managing Board and the remuneration policy for the Supervisory Board, which were submitted to and approved by the 2024 AGM; (ii) discussed the performance targets relating to the bonus of our President and Chief Executive Officer for the fiscal year ending on December 31, 2024, (which short-term targets are based on, *inter alia*, four to seven performance conditions with a mix of financial criteria for approximately 70% and non-financial criteria (including sustainability/corporate social responsibility performance) for approximately 30%, and long-term targets are based on, *inter alia*, two financial performance conditions constituting revenue growth versus a range of semiconductor peer companies (the "Peer Group" as discussed below) and average of operating margin ratio before restructuring, and one non-financial performance condition constituting the composite sustainability/corporate social responsibility index including health and safety, CO₂ neutrality, diversity and inclusion and people engagement (as further detailed in Section 4.9.2. (*Remuneration Report - Managing Board remuneration*)); (iii) discussed the performance targets relating to the bonus of our President and Chief Financial Officer for the fiscal year ending on December 31, 2024, (which short-term targets are based on, *inter alia*, four to seven performance conditions with a mix of financial criteria for approximately 70% and non-financial criteria (including sustainability/corporate social responsibility performance) for approximately 30%, and

long-term targets are based on, *inter alia*, two financial performance conditions constituting revenue growth versus a range of semiconductor peer companies and average of operating margin ratio before restructuring, and one non-financial performance condition constituting the composite sustainability/corporate social responsibility index including health and safety, CO₂ neutrality, diversity and inclusion and people engagement (as further detailed in Section 4.9.2. (*Remuneration Report - Managing Board remuneration*)) and (iv) established, on behalf and with the approval of the entire Supervisory Board, the applicable performance criteria, which must be met by senior managers and selected key employees participating in the employee stock award plans to benefit from such awards (for the 2021 unvested stock award plan, these performance criteria are further described below in Section 4.9.2. (*Remuneration Report - Managing Board Remuneration – Managing Board remuneration structure*)).

4.5. Strategic Committee

Our Strategic Committee advises the Supervisory Board on and monitor key developments within the semiconductor industry, our overall strategy for sustainable long-term value creation, and the long-term planning and budgeting. Our Strategic Committee met twice in 2024. In addition, there were strategic discussions, many of which occurred at extended Supervisory Board meetings and involved all Supervisory Board members.

4.6. Nominating and Corporate Governance Committee

Our Nominating and Corporate Governance Committee advises the Supervisory Board on the selection criteria and procedures relating to the appointment of members to our Supervisory Board and Managing Board, and the review of principles relating to corporate governance. Our Nominating and Corporate Governance Committee met 4 times during 2024 to discuss succession planning for our Supervisory Board and Managing Board, best practices regarding corporate governance, and the update of our corporate governance documents.

4.7. Sustainability Committee

Our Sustainability Committee advises and supports the Supervisory Board in relation to its responsibilities in supervising, monitoring and advising on the Company's sustainability strategy, targets, goals and overall sustainability performance. Our Sustainability Committee met 3 times in 2024 to discuss our overall sustainability strategy, as well as our sustainability performances and reporting.

4.8. Secretariat and Controllers

Our Supervisory Board appoints a secretary (the "Secretary") and a vice secretary (the "Vice Secretary"). Furthermore, the Managing Board makes an executive secretary (the "Executive Secretary") available to our Supervisory Board, who is also appointed by the Supervisory Board. The Secretary, Vice Secretary and Executive Secretary constitute the secretariat of the Supervisory Board (the "Secretariat"). The mission of the Secretariat is primarily to organize meetings, to ensure the continuing education and training of our Supervisory Board members and to maintain record keeping. Our Chief Ethics and Compliance Officer, Philippe Dereeper, serves as Executive Secretary for our Supervisory Board, and for each of the five standing committees of our Supervisory Board. Ms. Charlotte Fadlallah serves as Secretary and Ms. Alessia Allegretti serves as Vice Secretary. Ms. Fadlallah also serves as a managing director of ST Holding.

Our Supervisory Board also appoints two financial experts (the "Controllers"). The mission of the Controllers is primarily to assist our Supervisory Board in evaluating our operational and financial performance, business plan, strategic initiatives and the implementation of Supervisory Board decisions, as well as to review the operational reports provided under the responsibility of the Managing Board. The

Controllers generally meet once a month with the management of the Company and report to our full Supervisory Board. The current Controllers are Mr. Samuel Dalens and Mr. Paolo Bonazzi. Mr. Dalens also serves as a member of the supervisory board of ST Holding. The STH Shareholders Agreement between our principal indirect shareholders contains provisions with respect to the appointment of the Secretary, Vice Secretary and Controllers.

4.9. Remuneration report

4.9.1. Supervisory Board remuneration

On December 1, 2019, a Dutch act implementing the revised EU Shareholders' Rights Directive (2017/828/EU) ("SRDII") took effect in The Netherlands. As we are incorporated under the laws of The Netherlands and our common shares are admitted to trading on regulated markets in the EU, we are required, *inter alia*, to have a remuneration policy in accordance with the SRDII requirements with respect to the compensation of the Supervisory Board members and to comply with the respective disclosure requirements introduced to the Dutch Civil Code. In connection therewith, we present in this section certain comparative information on our performance relative to the compensation of the Supervisory Board members.

4.9.1.1 Supervisory Board Remuneration Policy

Our Articles of Association provide that the compensation of our Supervisory Board members is determined by our general meeting of shareholders. Our proposal for adoption of a remuneration policy for the Supervisory Board members to ensure compliance with the new requirements under the Dutch Civil Code following the implementation of SRDII, was approved by the AGM on June 17, 2020, with a vote percentage in favor of the policy of 98.43%. As its term lapsed per the date of the 2024 AGM, the remuneration policy of the Supervisory Board was resubmitted to the 2024 AGM for renewal and was approved with a vote percentage in favor of the policy of 98.28%.

4.9.1.2 Compensation paid to current and former Supervisory Board members in financial year 2024

The annual compensation of the Supervisory Board members is comprised of an annual fee and an attendance fee, promoting effective and independent supervision in the interest of the Company and the long-term success of the Company. There is no variable compensation nor stock-based compensation awarded to the members of our Supervisory Board.

The aggregate compensation for current and former members of our Supervisory Board with respect to service in 2024 was €970,500 before any applicable withholding or other taxes, as set forth in the following table. No reimbursement fees were paid to members of our Supervisory Board in 2024.

Supervisory Board Members Fees		Annual Fees	Attendance Fees	Total
Nicolas Dufourcq ⁽¹⁾	€	—	—	—
Maurizio Tamagnini ⁽³⁾	€	144,000	28,500	172,500
Pascal Daloz ⁽²⁾	€	70,000	3,500	73,500
Janet Davidson	€	84,500	30,500	115,000
Yann Delabrière ⁽²⁾	€	—	10,000	10,000
Ana de Pro Gonzalo	€	133,500	27,500	161,000
Frédéric Sanchez	€	80,500	29,000	109,500
Donatella Sciuto	€	81,000	26,500	107,500
Paolo Visca	€	77,000	21,000	98,000
Hélène Vletter-van Dort	€	88,000	35,500	123,500
Total	€	758,500	212,000	970,500

- (1) Mr. Dufourcq waived his rights to receive any compensation from the Company in relation to his mandate as a member of the Supervisory Board or otherwise.
- (2) Mr. Yann Delabrière was a member of our Supervisory Board until May 22, 2024, on which date his term expired and on such date Mr. Pascal Daloz was appointed as a new member of our Supervisory Board.
- (3) Mr. Maurizio Tamagnini was a member of our Supervisory Board until his resignation on March 19, 2025.

4.9.1.3 Supervisory Board remuneration comparison

Set forth in the following table is the annual change over the last five years of (i) the average remuneration of our Supervisory Board members, (ii) the performance of the Company (based on US GAAP where relevant) and (iii) the average remuneration of our indirect employees (i.e., all indirect employees other than the members of our Senior Management, including the members of our Managing Board).

In U.S. dollars	2024	2023	2022	2021	2020
Supervisory Board members remuneration					
Average remuneration of Supervisory Board members ⁽¹⁾	\$ 112,082	\$ 119,413	\$ 113,985	\$ 114,775	\$ 99,431
Company performance					
Net revenues (amounts in millions)	\$ 13,269	\$ 17,286	\$ 16,128	\$ 12,761	\$ 10,219
Operating income - US GAAP (amounts in millions)	\$ 1,676	\$ 4,611	\$ 4,439	\$ 2,419	\$ 1,323
Employee remuneration					
Average remuneration ⁽²⁾ of all global indirect employees (FTE basis) ⁽³⁾	\$ 114,400	\$ 114,100	\$ 109,600	\$ 111,200	\$ 98,500

- (1) Using the Euro per U.S. dollar exchange rate on December 31, 2024 of €1 = \$1.0394
- (2) Remuneration is defined as all remuneration paid to indirect employees including base salary, variable compensation in both cash and shares, social premiums, pension, expense allowances and benefits in kind. The average is calculated by taking the sum of remuneration costs and dividing by the average number of full-time equivalent indirect employees over the period.
- (3) Global indirect employees are all employees other than those directly manufacturing our products, excluding Senior Management. "FTE" refers to full time equivalent.

In connection with the above table and to provide insight in the correlation between the remuneration of each Supervisory Board member and the Company performance as well as the average remuneration of all global indirect employees (FTE basis) over the past five years, the table below sets forth the remuneration (including attendance fees) of each Supervisory Board member for the past five years:

Supervisory Board Members Fees ⁽¹⁾	2024	2023	2022	2021	2020
Nicolas Dufourcq	\$ 0 ⁽²⁾	0 ⁽²⁾	0 ⁽²⁾	0 ⁽²⁾	0 ⁽²⁾
Maurizio Tamagnini ⁽⁸⁾	\$ 179,296	191,433	181,475	181,224	192,002
Pascal Daloz ⁽⁷⁾	\$ 76,395	N/A	N/A	N/A	N/A
Janet Davidson	\$ 119,531	126,723	121,695	117,229	123,912
Yann Delabrière ⁽³⁾	\$ 10,394	108,389	106,216	111,566	107,962.8
Ana de Pro Gonzalo ⁽⁴⁾	\$ 167,343	175,256	172,401	171,030	172,372
Heleen Kersten	\$ 10,394	14,020	129,168	121,760	128,819
Jean-Georges Malcor ⁽³⁾	\$ N/A	N/A	N/A	N/A	8,588
Lucia Morselli ⁽⁵⁾	\$ N/A	N/A	9,608	117,796	130,660
Alessandro Rivera	\$ N/A	10,785	92,873	99,107	103,055
Frédéric Sanchez	\$ 113,814	117,556	108,885	113,265	118,391
Donatella Sciuto ⁽⁵⁾	\$ 111,736	113,242	103,548	N/A	N/A
Martine Verluyten ⁽⁴⁾	\$ N/A	N/A	N/A	N/A	7,975
Paolo Visca ⁽⁶⁾	\$ 101,861	98,143	N/A	N/A	N/A
Hélène Vletter-van Dort ⁽⁶⁾	\$ 128,366	94,908	N/A	N/A	N/A

(1) These amounts are in US dollars using the Euro per US dollar exchange rate on December 31, 2024 of €1 = \$ 1.0394 and include a fixed annual compensation for the members' mandate, together with attendance fees from January 1 until December 31 of the relevant year.

(2) Mr. Dufourcq would have been entitled to receive remuneration in the relevant years, but each year he waived his rights to receive any compensation from the Company in relation to his mandate as a member of the Supervisory Board.

(3) The term of Mr. Jean-Georges Malcor ended on June 17, 2020 and Mr. Yann Delabrière was appointed on June 17, 2020, and his term subsequently ended on May 22, 2024.

(4) The term of Ms. Martine Verluyten ended on June 17, 2020 and Ms. Ana de Pro Gonzalo was appointed on June 17, 2020.

(5) The term of Ms. Lucia Morselli ended on May 25, 2022 and Ms. Donatella Sciuto was appointed on May 25, 2022.

(6) The term of Ms. Heleen Kersten and Mr. Alessandro Rivera ended on May 24, 2023 and Mr. Paolo Visca and Mrs. Hélène Vletter-van Dort were appointed on May 22, 2024.

(7) Mr. Pascal Daloz as appointed on May 22, 2024.

(8) Mr. Maurizio Tamagnini was a member of our Supervisory Board until his resignation on March 19, 2025.

We do not have any service agreements with any of the members of our Supervisory Board. We did not extend any loans or overdrafts to any of our Supervisory Board members. Furthermore, we have not guaranteed any debts or concluded any leases with any of our Supervisory Board members or their families. No share awards or stock options were granted to Supervisory Board members.

For further details on the compensation of the members of our Supervisory Board we refer to Note 7.6.35 to our consolidated financial statements.

4.9.2. Managing Board remuneration

For details on the performance of ST in 2024, we refer to the Business overview in Section 3.2.1. (*Report of the Managing Board - Business Overview and Performance - Results highlights for the year 2024*)

4.9.2.1 Guiding principles of Managing Board Compensation

Amongst others, the following key principles are considered by the Supervisory Board to determine the remuneration structure of the members of the Managing Board:

- alignment with the Company's strategy: the compensation package should be strongly linked to the achievement of targets that are indicators of the execution of the Company's business strategy.

- improving the performance of the Company: most of the compensation (excluding base salary, benefits, and pensions) is directly linked to the Company's performance through variable pay incentives. These incentives are based on ambitious performance conditions that include a mix of internal and external criteria as well as relative performance conditions against peers. For details on the performance of the Company in 2024, we refer to the Business overview in Section 3.2.1. (*Report of the Managing Board - Business Overview and Performance - Results highlights for the year 2024*)
- enhancing long-term creation of shareholder value: to strengthen the alignment with the interests of the shareholders and to enhance the sustainable long-term value creation of the Company, the compensation structure includes short-term and long-term variable remuneration either in cash or in shares or a combination thereof.
- promoting sustainable corporate development: to ensure that the Company is managed in a sustainable and responsible manner for the common good, the remuneration includes non-financial performance conditions related to corporate social responsibility and environmental, social, and governance factors. Both short- and long-term incentive include performance conditions promoting ST's sustainable growth.
- retaining and motivating key employees: the compensation package should be competitive, ensuring remuneration levels are determined by reference internally between the Company's senior managers and externally against the Peer Group.

In accordance with the key principles of the Company's remuneration structure, the total remuneration of the members of our Managing Board, takes into consideration factors such as the size and complexity of our Company, our global presence and that of our customers, the pace of change in our industry, the Company's value proposition, strategy and goal of sustainable long-term value creation, and the need to recruit and retain key personnel.

4.9.2.2 Managing Board remuneration policy

The remuneration of the members of our Managing Board is determined by our Supervisory Board on the advice of the Compensation Committee.

In compliance with the disclosure requirements in the Dutch Civil Code, we present in this section certain comparative information on our performance relative to the compensation of the members of our Managing Board.

The Compensation Committee advises the Supervisory Board in reviewing the remuneration package of the members of our Managing Board, both in the context of the Company performance and against the Peer Group and relevant market index. Before setting targets for the members of our Managing Board, the Compensation Committee carries out scenario analyses of the possible financial outcomes of meeting target levels.

Set forth in the table below is the list of companies retained for the Peer Group compensation analysis used for the remuneration policy for the Managing Board:

Analog Devices	ON Semiconductor
Infineon	Texas Instruments
Monolithic Power Systems	Vishay
Microchip	Rohm
NXP Semiconductors	Renesas

Should one of the Peer Group companies in the above table not publish financial results for any reason, the companies Diodes and/or Melexis would replace the missing company.

The remuneration of the members of our Managing Board is bound by the remuneration policy as adopted by our 2024 AGM, with a majority of votes of 94.53% in favor, for a duration of a maximum of four years (the "2024 Remuneration Policy"). Under the terms of the Dutch Civil Code, the remuneration policy for the Managing Board shall be submitted to the AGM for adoption at least every four years after its adoption. A resolution to adopt the remuneration policy requires a majority of at least 75% of the votes cast. At the 2024 AGM, 95% of voting shareholders voted in favor of the remuneration report.

The 2024 Remuneration Policy for the Managing Board contains the following key features, which are the same as those included in the prior remuneration policy for the Managing Board adopted by our 2021 AGM:

- a link between Managing Board remuneration and long-term company strategy;
- a short-term incentive structure (fully paid in cash) featuring disclosure of criteria and threshold, targets, and maximum performance levels;
- corporate social responsibility criteria among performance conditions for both the short-term and long-term incentive in line with our objectives of promoting sustainable corporate development;
- enhanced disclosure of long-term incentive (share-settled) performance conditions and threshold and target performance levels as well as the remaining outstanding shares (which are not yet vested);
- a three-year performance period for long-term incentives (as compared to one year previously), with vesting based on performance measured over the three-year performance period, to improve alignment of Managing Board remuneration with our objective of enhancing long-term shareholder value;
- disclosure regarding early vesting provisions for the unvested stock awards;
- the implementation of share ownership guidelines for the Managing Board; and
- claw-back provisions in order to reclaim payments after they have been awarded or to withhold remuneration under specific conditions.

4.9.2.3. Managing Board remuneration structure

The remuneration structure is reflective of the level of responsibility of the Managing Board and each of the members of the Managing Board. The remuneration structure is further aligned to the Company's current context while remaining competitive and providing an incentive to promote the Company's performance over the medium to long-term and is in line with the Company's corporate interest and the interests of all its stakeholders.

The Supervisory Board, upon proposal from the Compensation Committee, determines the remuneration structure and remuneration amounts for the members of our Managing Board, based on the analysis of the theoretical maximum total direct remuneration (i.e., sum of base salary, maximum short-term incentive, and maximum long-term incentive).

The remuneration package of each member of our Managing Board, our President and Chief Executive Officer, and our President and Chief Financial Officer, respectively, is comprised of the following:

- a base salary; and
- variable components, linked to performance:

- **a short-term incentive** for our President and Chief Executive Officer of up to 210% of base salary which is fully paid in cash and for our President and Chief Financial Officer of up to 150% of base salary, which is fully paid in cash; and
- **a long-term incentive** through the grant of **stock awards**, up to a maximum of 100,000 shares for our President and Chief Executive Officer and up to a maximum of 90,000 shares for our President and Chief Financial Officer.

The sum of these three elements represents the maximum total direct remuneration for the members of our Managing Board.

The above-mentioned three elements of the maximum total direct remuneration of the members of our Managing Board are further described below.

Base salary

The purpose of the base salary is to provide a fixed level of earnings and to attract and retain the members of our Managing Board. It is a key component of overall remuneration, particularly as the short-term incentive is expressed as a percentage of base salary. The Company seeks to determine a fair and competitive base salary as compared to the Peer Group based on several factors.

Short-term incentive

The purpose of the short-term incentive is to motivate the members of our Managing Board to achieve financial and commercial objectives consistent with and supportive of the Company's strategy and to create a tangible link between annual performance and individual pay opportunity.

In accordance with the 2024 Remuneration Policy, (i) the short-term incentive of our President and Chief Executive Officer is fully paid in cash up to a maximum of 210% of the base salary for the relevant year, and (ii) the short-term incentive of our President and Chief Financial Officer is fully paid in cash up to a maximum of 150% of the base salary for the relevant year, all subject to the assessment and achievement of a number of performance conditions which are set annually by the Compensation Committee of our Supervisory Board.

The short-term incentive is subject to annual performance measurement of a unique set of 4 to 7 predefined criteria (both financial and non-financial) and a performance matrix both for financial and non-financial criteria that explicitly outline threshold and target outcomes (as well as over-performance conditions for financial criteria).

Performance measures and weightings are reviewed annually by the Compensation Committee. The recommendations made by the Compensation Committee regarding scorecard targets and weightings are designed to support the delivery of the Company's strategy. The Supervisory Board, upon recommendation by the Compensation Committee, retains the ability to adjust performance measure targets and weightings year-by-year within the overall target and maximum pay-outs approved in the remuneration policy.

The Supervisory Board, upon the recommendation of its Compensation Committee, sets the conditions and performance criteria that must be met by the members of our Managing Board for the attribution of their short-term incentive (which is paid in the subsequent year).

These performance conditions will enable the Supervisory Board to conduct a holistic and comprehensive assessment of the annual performance of the members of our Managing Board. The combination of financial and non-financial criteria is well balanced in terms of external and internal criteria and reflect the challenging objectives set by the Compensation Committee in line with the Company's ambitious long-term vision and business strategy.

Performance criteria 2024 short-term incentive

The financial performance criteria for 2024 set by the Supervisory Board were as follows (based on US GAAP):

- market share evolution, which is measured by assessing the Company's relative positioning and competitiveness in relation to its market and its industry peers and how fast the Company grows its revenues compared to its competitors. Market share is assessed on the basis of industry data published by the WSTS.
- revenue growth, which represents the total amount of income generated by the Company's operations;
- operating income, which is an important yardstick of profit measurement and reflects the operating performance of the business which does not take into consideration of non-operating gains or losses suffered by business, the impact of financial leverage and tax factors; and
- net operating cash flow, which is a liquidity metric that evaluates whether the Company has enough liquidity to meet its debt obligations. This metric helps assess the financial soundness of the Company in terms of liquidity risk, financial risk, credit risk and business risk.

The non-financial performance criteria for 2024 set by the Supervisory Board were as follows:

- execution of special manufacturing programs with a focus on SiC;
- execution of strategy implementation with a focus on the reorganization of our product groups and sales and marketing organization as announced on January 10, 2024; and
- sustainability/corporate social responsibility index, which is divided into four criteria related to:
 - health and safety: measured against, amongst others, the employee safety performance;
 - environment/climate: measured against, amongst others, direct emissions (kCO₂eq);
 - diversity and inclusion: measured against, amongst others, gender ratio among management levels; and
 - people management: measured against, amongst others, the employee survey (engagement index).

The weight of the sustainability/corporate social responsibility index is designed to remain stable over time, however the individual sub-components used to form the sustainability/corporate social responsibility index may evolve in the future to address sustainability priorities facing the Company and society.

The targets associated to each of the criteria used for the sustainability / corporate social responsibility index for the short-term incentive are consistent with the sustainability KPI definition, scope and targets of the Company that were in force at the time of the target setting.

Calculation of payout

The tables below set forth the calculation methodology for the pay-out of the short-term incentive to the members of our Managing Board.

As described in [Table A1](#) and [Chart A3.1](#) below, for our President and Chief Executive Officer the final pay-out of the short-term incentive is calculated by measuring the performance of each condition, then adding the sums of the corresponding pay-out from [Table A3](#), taking into account any applicable caps. The sum is then multiplied by the base salary to determine the final short-term incentive pay-out.

Table A1: Pay-out according to performance for each performance criterion for our President and Chief Executive Officer.

Annual short-term incentive performance criteria financial year 2024 for the President and Chief Executive Officer (to be paid in 2025)	Pay-out as a percentage of base salary			
	Performance below threshold	Performance above or equal to threshold and below target	Performance above or equal to target and below stretch	Performance above stretch
Financial performance conditions				
o Market share evolution	0%	15%	30%	45%
o Revenue growth	0%	20%	40%	60%
o Operating income	0%	20%	40%	60%
o Net operating cash flow	0%	20%	40%	60%
Sub-total for financial performance conditions	0%	75%	150%	Capped at 150%⁽¹⁾
Non-financial performance conditions				
o Execute special manufacturing programs	0%	15%	30%	30%
o Execute strategy implementation	0%	5%	10%	10%
o Sustainability/corporate social responsibility index	0%	10%	20%	Capped at 20%
Sub-total for non-financial performance conditions	0%	30%	60%	60%⁽²⁾
Total	0%	105%	210%	Short-term incentive pay-out capped at 210%

(1) Over-performance for certain financial conditions can balance the potential under-performance of other financial conditions if performance exceeds stretch targets, without exceeding a maximum pay-out of 150% of base salary in relation to the portion of the short-term incentive dependent on financial performance criteria.

(2) No stretch targets are defined for non-financial performance criteria.

As described in [Table A2](#) and [Chart A3.2](#). below, for our President and Chief Financial Officer, the final pay-out of the short-term incentive is calculated by measuring the performance of each condition, then adding the sums of the corresponding pay-out from [Table A4](#), taking into account any applicable caps. The sum is then multiplied by the base salary to determine the final short-term incentive pay-out.

[Table A2](#): Pay-out according to performance for each performance criterion for our President and Chief Financial Officer.

Annual short-term incentive performance criteria financial year 2024 for the President and Chief Financial Officer (to be paid in 2025)	Pay-out as a percentage of base salary			
	Performance below threshold	Performance above or equal to threshold and below target	Performance above or equal to target and below stretch	Performance above stretch
Financial performance conditions				
o Market share evolution	0%	12%	21%	32%
o Revenue growth	0%	14%	29%	43%
o Operating income	0%	14%	29%	43%
o Net operating cash flow	0%	14%	29%	43%
Sub-total for financial performance conditions	0%	54%	108%	Capped at 108%⁽¹⁾
Non-financial performance conditions				
o Execute special manufacturing programs	0%	10%	21%	21%
o Execute strategy implementation	0%	4%	7%	7%
o Sustainability/corporate social responsibility index	0%	7%	14%	Capped at 14%
Sub-total for non-financial performance conditions	0%	21%	42%	42%⁽²⁾
Total	0%	75%	150%	Short-term incentive pay-out capped at 150%

(1) Over-performance for certain financial conditions can balance the potential under-performance of other financial conditions if performance exceeds stretch targets, without exceeding a maximum pay-out of 108% of base salary in relation to the portion of the short-term incentive dependent on financial performance criteria.

(2) No stretch targets are defined for non-financial performance criteria.

Set forth in the following [Table A3](#), [Chart A3.1](#) and [Chart A3.2](#) is the weight set for 2024 for each of the performance criteria that have been assessed by the Supervisory Board in March 2025 for the attribution of the 2024 short-term incentive (to be paid in 2025 to each of the members of the Managing Board):

Table A3: Performance criteria with target weighting and pay-out

Annual short-term incentive performance criteria financial year 2024 (to be paid in 2025)	Target Weighting(as a % of total weighting for performance criteria)		Target pay-out (as a % of base salary)	
	CEO	CFO	CEO	CFO
Financial performance conditions (based on US GAAP)				
o Market share evolution	14%	14%	30%	21%
o Revenue growth	19%	19%	40%	29%
o Operating income	19%	19%	40%	29%
o Net operating cash flow	19%	19%	40%	29%
Sub-total for financial performance conditions	71%	71%	150%	108%
Non-financial performance conditions				
o Execute special manufacturing programs	14%	14%	30%	21%
o Execute strategy implementation	5%	5%	10%	7%
o Sustainability/corporate social responsibility index	10%	10%	Capped at 20%	Capped at 14%
Sub-total for non-financial performance conditions	29%	29%	60%	42%
Total	100%	100%	210%	150%

Chart A3.1: Performance criteria with target weighting at target pay-out for our President and Chief Executive Officer

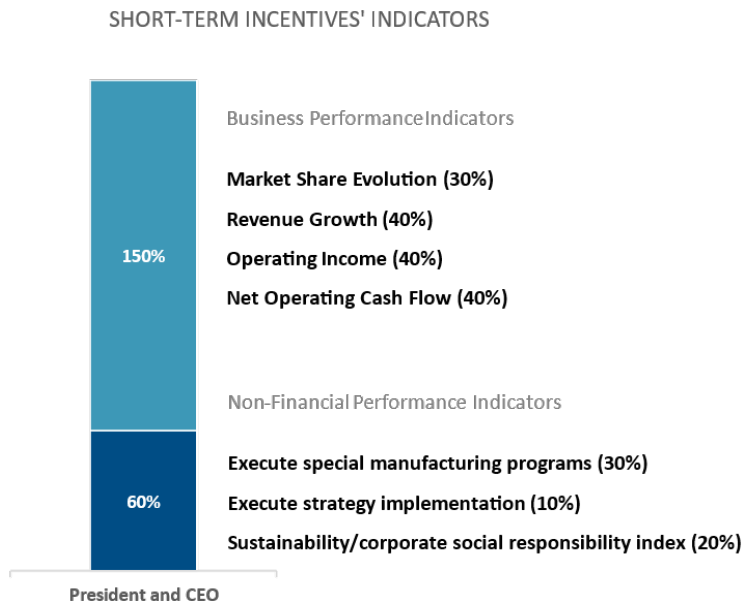

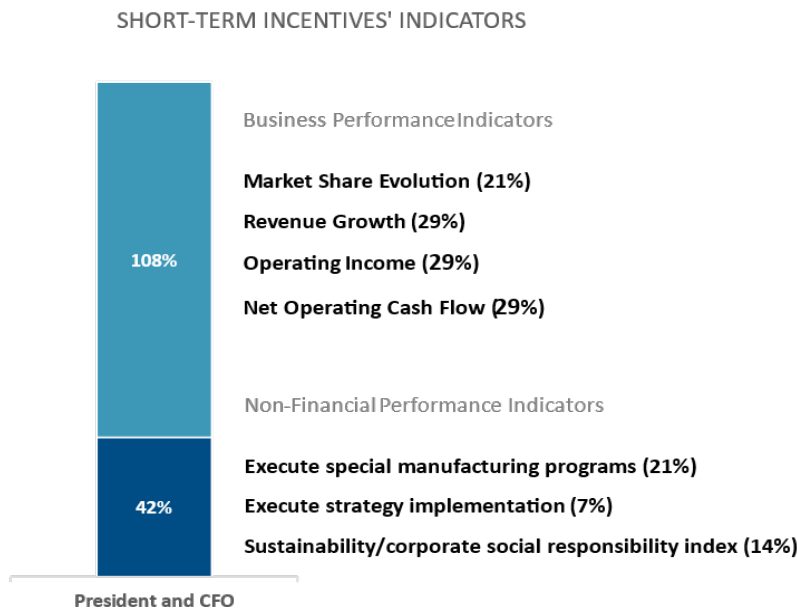

Chart A3.2: Performance criteria with target weighting at target pay-out for our President and Chief Financial Officer

Assessment of the 2024 short-term incentive

The evaluation and assessment of the fulfillment of conditions and performance criteria were completed by the Compensation Committee of our Supervisory Board on March 26, 2025, in order to determine the amount of the 2024 short-term incentive. The amount of the 2024 short-term incentive (to be paid in 2025) of the members of our Managing Board, is EUR 889,950 (gross), of which (i) EUR 660,000 for our President and Chief Executive Officer, which is 60% of his base salary, representing a global achievement rate of 60% (out of the maximum of 210%) and (ii) EUR 229,950 for our President and Chief Financial Officer, which is 42% of his base salary, calculated based on the prorated base salary (i.e. the base salary perceived in 2024 under his appointment as Managing Board member which represents approximately 61% of his annual base salary), representing a global achievement rate of 42% (out of the maximum of 150%).

The assessment of the sustainability/corporate social responsibility index is further detailed in the table below. The assessment of the other two non-financial performance conditions has been done based on a set of specific KPIs for which details cannot be disclosed due to their sensitive nature. The assessment of the criteria related to the execution of strategy implementation reflects notably the implementation of the new product group organization in 2024. The assessment of the criteria related to special manufacturing programs reflects notably the alignment with a number of pre-set deadlines.

The Compensation Committee of our Supervisory Board determined that based on the 2024 performance of our President and Chief Executive Officer:

- (1) for our President and Chief Executive Officer, the financial performance criteria have been assessed as follows: market share evolution (performance below threshold, payout of 0%), revenue growth (performance below threshold, payout of 0%), operating income (performance below threshold, payout of 0%), net operating cash flow (performance below threshold, payout of 0%), as further detailed in the table below;
- (2) for our President and Chief Executive Officer, the non-financial performance criteria have been assessed as follows: execute special manufacturing programs (performance equal to target, payout of 30%), execute strategy implementation (performance equal to target, payout of 10%), sustainability/corporate social responsibility index (performance equal to target, payout of 20%), capped at 20%.

Pay-out as a percentage of base salary for the President and Chief Executive Officer								
Annual short-term incentive performance criteria	Performance above or equal to threshold and below target ⁽¹⁾		Performance above or equal to target and below stretch		Performance above stretch		Achievement over 2024	
financial year 2024 (to be paid in 2025)

Total		105%		210%		Capped at 210%⁽²⁾		60%

- (1) The threshold acts as a trigger point: if the performance does not exceed the threshold, no payment will be made under the applicable criteria.
- (2) Based on US GAAP where relevant.
- (3) Over-performance for financial conditions can balance the potential under-performance of other financial conditions if performance exceeds stretch targets, without exceeding a maximum pay-out of 150% of base salary regarding the portion of the short-term incentive dependent on financial performance criteria.
- (4) Calculated based on the OSHA and differs from health and safety metrics included in Section 3.4.4.1 G (*Own workforce - Targets and Metrics*) which are based on the CSRD.
- (5) The calculation of this criterion differs from the calculation of ST's GHG inventory as disclosed in Section 3.4.3.1 (*Environment - Climate Change - Gross scope 1,2,3 and Total GHG emissions*) as a different scope is covered.

The Compensation Committee of our Supervisory Board determined that based on the 2024 performance of our President and Chief Financial Officer:

- (1) for our President and Chief Financial Officer, the financial performance criteria have been assessed as follows: market share evolution (performance below threshold, payout of 0%), revenue growth (performance below threshold, payout of 0%), operating income (performance below threshold, payout of 0%), net operating cash flow (performance below threshold, payout of 0%), as further detailed in the table below;
- (2) for our President and Chief Financial Officer, the non-financial performance criteria have been assessed as follows: execute special manufacturing programs (performance equal to target, payout of 21%), execute strategy implementation (performance equal to target, payout of 7%), sustainability/corporate social responsibility index (performance equal to target, payout of 14%), capped at 14%.

Pay-out as a percentage of base salary for the President and Chief Financial Officer

- (1) The threshold acts as a trigger point: if the performance does not exceed the threshold, no payment will be made under the applicable criteria.
- (2) The achievement rate is expressed as a % of base salary). Since the President and Chief Financial Officer was appointed as Managing Board member on May 22, 2024, the achievement rate for 2024 is calculated based on the prorated base salary (corresponding to the period from May 22, 2024, his appointment as Managing Board member, to December 31, 2024, i.e. 61% of his annual base salary).
- (3) Based on US GAAP where relevant.
- (4) Over-performance for financial conditions can balance the potential under-performance of other financial conditions if performance exceeds stretch targets, without exceeding a maximum pay-out of 108% of base salary regarding the portion of the short-term incentive dependent on financial performance criteria.
- (5) Calculated based on the OSHA and differs from health and safety metrics included in Section 3.4.4.1 G (*Own workforce - Targets and Metrics*) which are based on the CSRD.
- (6) The calculation of this criterion differs from the calculation of ST's GHG inventory as disclosed in Section 3.4.3.1 (*Environment - Climate Change - Gross scope 1,2,3 and Total GHG emissions*) as a different scope is covered.

Long-term incentive

The purpose of the long-term incentive is to motivate the members of our Managing Board, to deliver long-term shareholder value through long-term profitability and share price growth.

The terms of this long-term incentive are included in the long-term incentive plan approved at the 2024 AGM, allowing for grants of unvested stock awards in 2024, 2025 and 2026. The vesting of unvested stock awards is subject to the achievement of performance conditions and calculated over a three-year performance period. Grants of unvested stock awards made in 2024, 2025 and 2026 will fully vest, subject to performance conditions, in 2027, 2028 and 2029 respectively.

Award levels are determined annually by the Compensation Committee within the maximum amounts set by the Supervisory Board. In accordance with the resolution adopted by our 2024 AGM the maximum annual grant to be allowed (i) in relation to the President and Chief Executive Officer's stock award for 2024, 2025 and 2026 is 100,000 unvested stock awards, subject to performance criteria, and (ii) in relation to the President and Chief Financial Officer's stock award for 2024, 2025 and 2026 is 90,000 unvested stock awards, subject to performance criteria.

The Supervisory Board, upon recommendation of the Compensation Committee, determines whether the performance criteria are met and concludes whether and to which extent the members of our Managing Board, are entitled to any stock awards under the long-term incentive plan. Scorecard targets are not disclosed prospectively as it would require the disclosure of commercially sensitive information. Scorecard targets will be disclosed, as relevant, only when they are no longer deemed to be commercially sensitive.

Long-term incentive grant in 2024

For the 2024 long-term incentive, the performance criteria, used for the assessment for the Managing Board members, are:

- revenue growth;
- operating margin; and

- sustainability/corporate social responsibility index, which was comprised of the following KPIs (including two external criteria):
 - environment/climate: measured against, amongst others, the direct emissions (kCO₂ equivalent);
 - diversity, inclusion and people engagement: measured against, amongst others, gender ratio among management levels;
 - investor ESG index: measured against, amongst others, the Dow Jones sustainability indices; and
 - carbon rating: measured against, amongst others, the Carbon Disclosure Project carbon rating.

The targets associated to the two internal criteria (environment / climate and diversity, inclusion and people engagement) used for the sustainability / corporate social responsibility index for the long-term incentive are consistent with the sustainability KPI definition, scope and targets of the Company that were in force at the time of the target setting.

Set forth in the following [Table B1](#) and [Chart B1](#) is the weight set for each of the performance criteria that will be assessed by the Supervisory Board over the three-year performance period for the attribution of the relevant long-term incentive grant in 2024. [Table B2](#) sets out the shares to vest at the end of the three-year vesting period based on performance.

[Table B1](#): Long-term incentive performance criteria and target weighting over the three-year performance period

Long-term incentive plan performance criteria to be assessed over a three-year period	Target Weighting (as % of maximum achievement score)
Revenue growth (financial year 2026 vs financial year 2023 in comparison to Peer Group)	33.33%
Operating margin ratio before restructuring (average for the 2024 – 2026 period)	33.33%
Sustainability/ corporate social responsibility index	33.33%
Maximum achievement score	100% which corresponds to a maximum of (i) 100,000 unvested stock awards with regard to our CEO and (ii) 90,000 unvested stock awards with regard to our CFO

[Chart B1](#): Long-term incentive performance criteria and target weighting over the three-year performance period

Table B2: Shares to vest at the end of the three-year vesting period according to performance for each performance criterion

Long-term incentive plan performance criteria to be assessed over a three-year performance period	Shares to vest as a percentage of maximum award			
	Performance below threshold	Performance equal to threshold	Performance above threshold and below target	Performance above or at target
Revenue growth (financial year 2026 vs financial year 2023 in comparison to Peer Group)	0%	16.67%	25%	33.33%
Operating margin ratio before restructuring (average for the 2024 – 2026 period)	0%	16.67%	16.67%	33.33%
Sustainability/ corporate social responsibility index	0%	16.67%	16.67%	33.33%
Total	0%	50%	58.34%	100%

Vesting schedule for outstanding awards

Set forth in the following Table B3 is an overview of the outstanding awards that have been granted in accordance with the long-term incentive plan adopted by the 2021 AGM and the long-term incentive plan adopted by the 2024 AGM to the members of our Managing Board. For the purposes of the vesting schedule table below, a hypothetical achievement rate of 100% of performance conditions is used.

Table B3: Vesting schedule for the 2022, 2023 and 2024 long-term incentive grants

Name and principal position	Grant date	Final vesting date	Max. number of shares that can be granted	Number of shares that have been granted subject to performance conditions achievement ⁽²⁾	Share price at grant (in \$)	2025 vesting	2026 vesting	2027 vesting	Unvested shares as of end of 2024
Jean-Marc Chery President and Chief Executive Officer	July 24, 2024	AGM date for 2027	100,000	100,000	\$33.47			100,000 ⁽¹⁾	100,000
	July 26, 2023	AGM date for 2026	100,000	100,000	\$51.55		100,000 ⁽¹⁾		100,000
	July 27, 2022	AGM date for 2025	100,000	100,000	\$36.33	100,000 ⁽¹⁾			100,000
	Total vesting								300,000
Lorenzo Grandi President and Chief Financial Officer	July 24, 2024	AGM date for 2027	90,000	75,000	\$33.47			75,000 ⁽¹⁾	75,000
	Total vesting								75,000

(1) In the event of 100% achievement of performance criteria to be assessed by the Supervisory Board.

- (2) Shares granted based on the long-term incentive plan 2021 vest after a three-year performance period subject to the achievement of performance conditions.

Assessment of performance criteria for 2022 long-term incentive grant

The evaluation and assessment of the fulfillment of conditions and performance criteria for the 2022 long-term incentive grant, were completed by the Compensation Committee of our Supervisory Board on March 26, 2025, whereby the shares granted under the 2022 long-term incentive grant amount to 91,667.

Table B4 below sets forth the assessment of the performance criteria for the 2022 long-term incentive grant to our President and CEO, who at that time was the sole member of our Managing Board.

2022 Long-term incentive grant to our President & Chief Executive Officer

Long-term incentive performance criteria financial year 2022 (to be paid in 2025)	Performance above or equal to threshold and below target ⁽¹⁾	Performance above or equal to target and below stretch	Performance above stretch	Achievement over 2024 ⁽¹⁾	
Financial performance conditions					
Evolution of Sales of FY 2024 versus FY 2021 (rank within Peer Group) ⁽³⁾	Between 6 th (included) and 4 th (excluded) 16.66%	At 4 th or better 33.33%	At 4 th or better 33.33%	5 th rank 25%	
Average of Operating Income before restructuring expressed as a % of sales of cumulated period from FY 2022 to FY 2024	Between 13.5% (including) and 15.5% (excluding) 16.66%	>=15.5% 33.33%	>=20.80% 33.33%	22.98% 33.33%	
Non-financial performance conditions					
Sustainability/corporate social responsibility index	At Threshold (>=60%) 16.66%	>=80% (target) 33.33%	>=80% (target) 33.33%	Capped at 33.33%	
<i>Details of sustainability index</i>	<i>Weight</i>	<i>Threshold</i>	<i>Target</i>	<i>Stretch</i>	<i>Achievement</i>
GHG emissions (kTCO2 equivalent) ⁽²⁾	25%	950	900	850	708 At stretch
% women managers to senior managers (year end)	25%	At least 21% women JG 15-17	At least 22% women JG 15-17	At least 18% women JG 18 and above	21.10% JG 15-17 At Threshold
Dow Jones Sustainability Indexes	25%	In World or European Index at least 2 years	In World or European Index the 3 years	In World + European Index for 2 years	In World + European Index for 2022, 2023, 2024 At stretch
CDP Carbon	"25%	"A" or "A-" one year between 2022 and 2024	"A" or "A-" two years (between 2022 and 2024)	"A" or "A-" in 2022, 2023, and 2024	"A" or "A-" in 2023 & 2024 At target
Total	50%	100%	Capped at 100%	91.67% which corresponds to 91,667 unvested stock awards	

- (1) The threshold acts as a trigger point: if the performance does not exceed the threshold, no payment will be made under the applicable criteria.
- (2) The calculation of this criterion differs from the calculation of ST's GHG inventory as disclosed in Section 3.4.3.1 (*Environment - Climate Change - Gross scope 1,2,3 and Total GHG emissions*) as a different scope is covered.
- (3) In case of #5 ranking, the shares grant will be 25%.

Share ownership guidelines

The members of the Managing Board are expected to build up shareholding in ST equal to 1.5 times their base salary in line with the 2024 Remuneration Policy.

Claw-back provisions under Dutch law

All performance-related remuneration awarded to the members of our Managing Board, are subject to the following claw-back provisions, in accordance with Dutch law. If the Supervisory Board considers that there is a significant downward restatement of the Company's financial results, breach of duty from the members of our Managing Board, or where remuneration has been paid based upon incorrect information about the achievement of the goals on which the remuneration was based or the circumstances on which the bonus was dependent, it may, in its discretion, within two years of the performance-related remuneration of the members of our Managing Board, vesting or being paid:

- require the members of our Managing Board to repay to the Company an amount equal to the after-tax value of some or all of any short-term cash incentive or the Company's shares that were granted; and/or
- require the Company to withhold from, or offset against, any other remuneration to which the members of our Managing Board may be or become entitled in connection with its employment such an amount as the Supervisory Board considers appropriate.

When reaching its decision, the Supervisory Board will take into account the significance of the breach of duty and in addition, the Supervisory Board may take other actions in relation to the statutory provision e.g. claim for damages.

During 2024, no claw-backs occurred.

The members of our Managing Board, may also receive other types of remuneration other than the above-mentioned performance-related remuneration policy, as further described in the 2024 Remuneration Policy. Other types of remuneration described in the 2024 Remuneration Policy are, amongst others, social premiums, benefits in kind (including a company car), pension contributions and miscellaneous allowances.

Statement of Compliance with Section 303A.14 of the New York Stock Exchange Listed Company Manual

In accordance with the applicable provisions of the New York Stock Exchange Listed Company Manual providing for the recovery of erroneously awarded incentive-based compensation, the Company has adopted a statement of compliance which provides for recovery of erroneously awarded incentive-based compensation (including both cash and equity compensation) received by current and former executive officers, which includes the members of our Managing Board, during a three-year look back period following an accounting restatement. The Company did not have any restatement of financial statements that required a recovery of erroneously awarded compensation for the financial year ended December 31, 2024, nor up to the date of this report.

4.9.2.4. Compensation paid to the members of our Managing Board in financial year 2024

The members of our Managing Board, received compensation in the form of a base salary, short-term incentive, long-term incentive grant (unvested stock awards), social premiums, benefits in kind (including a company car), pension contributions and miscellaneous allowances.

The remuneration report relating to financial year 2023 was approved by the 2024 AGM with a vote percentage in favor of 95%. Amongst others, taking this high percentage of votes in favor into account, a similar approach was taken for the allocation of remuneration of the members of our Managing Board, over financial year 2024, in accordance with the remuneration policy as adopted in the 2024 AGM.

Set forth in the following table and chart is an overview of the total compensation of the members of our Managing Board, paid in 2024:

		President and Chief Executive Officer	President and Chief Financial Officer⁽¹⁾
Base salary		\$1,172,200	\$585,475
Variable components	Short-term incentive ⁽²⁾	\$2,458,745	\$ _____
	Long-term incentive ⁽³⁾	\$4,255,388 ⁽⁸⁾	\$ _____ ⁽⁴⁾
Other components	Benefits	\$120,855	\$67,850
	Social security contributions ⁽⁵⁾	\$1,058,494	\$200,801
	Pensions ⁽⁶⁾	\$399,449	\$947,460
	Miscellaneous allowances ⁽⁷⁾	\$ _____	\$ _____
	Termination benefits ⁽⁷⁾	\$ _____	\$ _____
Total		\$9,465,160	\$1,801,587

- (1) The compensation paid to our President and Chief Financial Officer as included in this table concerns his compensation received since his appointment as member of the Managing Board on May 22, 2024. The applied pro rata percentage amounts to 61% of his annual base salary (corresponding to the period from May 22, 2024, to December 31, 2024).
- (2) Short-term incentive includes the amount paid in cash in 2024 based on 2023 performance (the achievement rate was 205%). The short-term incentive based on 2024 performance will be determined by the Compensation Committee and will be paid in 2025.
- (3) The members of our Managing Board were granted, in accordance with the remuneration policy and subsequent shareholder authorizations, (i) with regard to the President and Chief Executive Officer: up to a maximum of 100,000 unvested stock awards, subject to performance criteria, and (ii) with regard to the President and Chief Financial Officer up to a maximum of 90,000 unvested stock awards, subject to performance criteria. The vesting of such stock awards is conditional upon the members of our Managing Board continued service with us.
- (4) For this financial year 2024, the long-term incentive is not relevant to our President and Chief Financial Officer, as he was appointed as member of the Managing Board on May 22, 2024. The first long-term incentive grant to our President and Chief Financial Officer occurred in July 2024, therefore the first vesting, depending on the assessment of the performance conditions by the Compensation Committee and the Supervisory Board after the three-year performance period, will take place in 2027.
- (5) The employer social security contributions relate to the fixed and variable remuneration, including the unvested stock awards.
- (6) Complementary pension plan for certain of the Company's key executives.
- (7) There were no miscellaneous allowances nor termination benefits paid to the members of our Managing Board in 2024.
- (8) The long-term incentive corresponds to the grant of shares in 2021 (100,000 shares) that have vested in full in May 2024 based on the three-year performance review period mechanism in place since 2021 (first vesting in 2024).

During 2024, the members of our Managing Board did not have any stock options and did not purchase any shares in the Company. During 2024, the members of our Managing Board sold 64,915 shares (all of which have been sold automatically from the relevant account to pay the taxes related to their vesting, through a sell-to-cover mechanism applied by default by ST).

4.9.2.4. Evolution of paid remuneration to the Managing Board

Our President and Chief Financial Officer has been appointed as member of our Managing Board per May 22, 2024, therefore the following table only includes the evolution of the total paid compensation of our President and Chief Executive Officer from 2022 to 2024:

President and Chief Executive Officer		2024	2023	2022
Base salary		\$ 1,172,200	\$ 1,213,544	\$ 1,250,954
Variable components	Short-term incentive ⁽¹⁾	\$ 2,458,745	\$ 2,819,125	\$ 2,506,576
	Long-term incentive ⁽²⁾	\$ 4,255,388	\$ 1,838,364	\$ 2,043,212
Other components	Benefits	\$ 120,885	\$ 117,737	\$ 108,023
	Social security contributions ⁽³⁾	\$ 1,058,494	\$ 877,128	\$ 857,448
	Pensions	\$ 399,499	\$ 435,717	\$ 452,230
	Miscellaneous allowances ⁽⁴⁾	\$ _____		
	Termination benefits	\$ _____		
Total		\$ 9,465,160	\$ 7,301,615	\$ 7,218,443

- (1) As of 2021 with the implementation of the remuneration policy of the Managing Board adopted at the 2021 AGM, the short-term incentive is paid fully in cash. The short-term incentive related to 2024, 2023 and 2022 was approved by the Compensation Committee and Supervisory Board with respect to the 2024, 2023 and 2022 financial year, respectively, based on the evaluation and assessment of the actual fulfillment of a number of predefined objectives for such year. The short-term incentive related to a relevant year is paid in the subsequent year, i.e. the short-term incentive related to the 2024, 2023 and 2022 financial year, respectively, is paid in 2025, 2024 and 2023 respectively. The achievement rate for the 2024 short-term incentive (to be paid in 2025), based on 2024 performance, was (i) 60% in cash out of maximum of 210% for our President and Chief Executive Officer and (ii) 42% in cash out of maximum of 150% for our President and Chief Financial Officer. The achievement rate for the 2023 short-term incentive (paid in 2024), based on 2023 performance, was 205% in cash out of the maximum of 210%. The achievement rate for the 2022 short-term incentive (paid in 2023), based on 2022 performance, was 205% in cash out of the maximum of 210%.
- (2) Following the Board's approval of the achievement of the performance conditions, the number of shares definitively acquired under the terms of the plans was as follows 56,002 shares in 2022, 36,000 shares in 2023 and 100,000 shares in 2024. The evolution of the number of shares acquired each year, is linked to the decision made by the Supervisory Board to transition from long-term incentive plans with annual vesting over a three-year performance period (long-term incentive grants before 2021) to long-term incentive plans with one-time vesting after a three-year performance period (long-term incentive grants since 2021).
- (3) The social security contributions relate to the fixed and variable remuneration, including the unvested stock awards.
- (4) There were no miscellaneous allowances nor termination benefits in the years 2024, 2023 and 2022.

4.9.2.5. Overview of the total compensation paid or owed to the members of our Managing Board, over financial years 2024, 2023, 2022

Set forth in the following table is the total compensation paid or owed to the members of our Managing Board, in office over financial years 2024, 2023 and 2022:

Name and title	Year	Base salary	Variable components		Other components ⁽¹⁾			Total	Fixed/ Variable remuneration
			Short-term Incentives ⁽²⁾	Long-term Incentives ⁽³⁾	Benefits	Social security contributions ⁽⁴⁾	Pensions		
Jean-Marc Chery President and Chief Executive Officer	2024	\$1,172,200	\$686,730	\$4,255,388	\$120,885	\$1,058,494	\$399,449	\$7,693,146	36% fixed/ 64% variable
	2023	\$1,213,544	\$2,487,766	\$1,838,364	\$117,737	\$877,128	\$435,717	\$6,970,256	38% fixed / 62% variable

	2022	\$ 1,250,954	\$ 2,564,455	\$ 2,043,212	\$ 108,023	\$ 857,448	\$ 452,230	\$ 7,276,322	37% fixed / 63% variable
Lorenzo Grandi	2024	\$585,475	\$239,263	—	\$67,850	\$200,801	\$947,460	\$2,040,849	88% fixed/ 12% variable ⁽⁵⁾
President and Chief Financial Officer									

- (1) There were no miscellaneous allowances nor termination benefits in the years 2024, 2023 and 2022.
- (2) As of 2021 with the implementation of the remuneration policy for our Managing Board adopted at the 2021 AGM, the short-term incentive is paid fully in cash. The short-term incentive related to 2024, 2023 and 2022 was approved and granted by the Compensation Committee and Supervisory Board with respect to the 2024, 2023 and 2022 financial year, respectively, based on the evaluation and assessment of the actual fulfillment of a number of pre-defined objectives for such year. The short-term incentive related to a relevant year is paid in the subsequent year, i.e. the short-term incentive related to the 2024, 2023 and 2022 financial year, respectively, is paid in 2025, 2024 and 2023 respectively. The achievement rate for the 2024 short-term incentive (to be paid in 2025), based on 2024 performance, was (i) 60% in cash out of maximum of 210% for our President and Chief Executive Officer and (ii) 42% in cash out of maximum of 150% for our President and Chief Financial Officer. The achievement rate for the 2023 short-term incentive (paid in 2024), based on 2023 performance, was 205% in cash out of maximum of 210%. The achievement rate for the 2022 short-term incentive (paid in 2023), based on 2022 performance, was 205% out of maximum of 210%.
- (3) Following the Supervisory Board's approval of the achievement of the performance conditions, the number of shares definitively acquired under the terms of the long-term incentive plans was as follows: 56,002 shares in 2022, 36,000 shares in 2023 and 100,000 shares in 2024. The evolution of the number of shares acquired each year, is linked to the decision made by the Supervisory Board to transition from long-term incentive plans with annual vesting over a three-year performance period (long-term incentive grants before 2021) to long-term incentive plans with one-time vesting after a three-year performance period (long-term incentive grants since 2021).
- (4) The social security contributions relate to the fixed and variable remuneration, including the unvested stock awards.
- (5) As our President and Chief Financial Officer was appointed as member of the Managing Board on May 22, 2024, this table does not include any long-term variable remuneration, since in his current position as member of the Managing Board, he will be eligible to receive any long-term incentive as of 2027, subject to the assessment of the performance conditions by the Compensation Committee and the Supervisory Board.

4.9.2.6. Compensation provisions in the event of termination or departure of the members of our Managing Board

The members of the Managing Board are appointed by the AGM for a three-year term, which term is renewable. Our President and Chief Executive Officer was reappointed at the 2024 AGM and our President and Chief Financial officer was appointed at the 2024 AGM, both for a three-year term, expiring at the 2027 AGM. The agreements with the members of the Managing Board may be a mandate agreement or an employment agreement. Although the relationship between a member of the Managing Board and a listed Dutch company will be treated as a mandate agreement and not as an employment agreement, existing employment agreements between the Company and a member of the Managing Board will remain in effect.

Our President and Chief Executive Officer has two employment agreements with us, first with the Company, which relates to his activities as member of our Managing Board and representative of the Company, and the second agreement with one of our legal entities in Switzerland, which relates to his activities as President and Chief Executive Officer, the executive incentive program ("EIP"), pension and other items covered by the remuneration policy for our Managing Board. The CEO Agreements can be terminated with a notice period of 6 months if terminated by the Company or 3 months if terminated by our President and Chief Executive Officer.

Our President and Chief Financial Officer has one employment agreement with one of our legal entities in Switzerland, which relates to his activities as President and Chief Financial Officer, the EIP, pension and other items covered by the 2024 Remuneration Policy (the "CFO Agreement"). The CFO Agreement can be terminated with a notice period of 3 months, if terminated by the Company, or 3 months if terminated by the President and Chief Financial Officer.

Severance clause

Pursuant to the CEO Agreements, our President and Chief Executive Officer will be entitled to a severance payment if his employment is terminated at the initiative of the Company, other than for cause, considering amongst others, his critical role in the Company and his seniority. The severance payment will be equal to a gross lump sum payment in the amount of two times his latest gross annual salary, plus the short-term incentive (being the average of the short-term incentive received in the last three years) subject to any and all applicable legal, regulatory and/or contractual deductions.

Any severance payments made will be disclosed in the remuneration report in the annual report of the financial year that this amount relates to, as well as the reason for the severance payment.

Vesting of stock awards in the event of termination or departure

In the event of termination of the employment or departure of the members of our Managing Board, their stock awards will either (i) be forfeited in full, (ii) accelerate in vesting or (iii) continue vesting, as shown in the table below.

	Resignation	Retirement	Termination by the Company		
			Not in connection with change of control or serious or gross misconduct	In connection with change of control	In connection with serious or gross misconduct
Outcome of unvested stock awards	<i>Forfeited in full</i>	<i>Continuation of vesting</i>	<i>Accelerated vesting</i>	<i>Accelerated vesting</i>	<i>Forfeited in full</i>

Set forth in the table below is an overview of the compensation of our President and Chief Executive Officer in the event of his termination or departure, as applicable.

	Resignation	Retirement	Termination by the Company		
			Not in connection with change of control or serious or gross misconduct	In connection with change of control	In connection with serious or gross misconduct
Severance Clause	<i>Not applicable</i>	<i>Not applicable</i>	<i>2 times the annual base salary plus average short-term incentive over the last 3 years</i>	<i>2 times the annual base salary plus average short-term incentive over the last 3 years</i>	<i>Not applicable</i>

4.9.3. Senior Management remuneration

4.9.3.1. Guiding principles of Senior Management compensation

The Managing Board determines the remuneration structure of the Senior Management based on, amongst others, the same key principles that the Supervisory Board considers when determining the remuneration structure of the Managing Board. These key principles are described above in Section 4.9.2.3. (*Managing Board remuneration - Guiding principles of Managing Board compensation*).

In accordance with the key principles, the total remuneration of the Senior Management takes into consideration factors such as the size and complexity of the Company, our global presence and that of our customers, the pace of change in our industry, the Company's value proposition, strategy and goal of sustainable long-term value creation, and the need to recruit and retain key personnel.

4.9.3.2. Senior Management remuneration structure

The structure of our remuneration for our (i) Managing Board, (ii) Senior Management, and (iii) certain other groups of senior employees is aligned and consists of a base salary, short-term incentive and long-term incentive, under specified conditions. The standard benefits for the aforementioned groups are also aligned.

The Managing Board determines the remuneration structure and remuneration amounts for our Senior Management based on the analysis of the theoretical maximum total direct remuneration (i.e., sum of base salary, maximum short-term incentive, and maximum long-term incentive).

The remuneration package of the Senior Management is comprised of the following:

- **base salary**; and
- **variable components**, linked to performance:
 - a short-term incentive which is fully paid in cash.
 - a long-term incentive through the grant of stock awards, that are included in the long-term incentive plan approved at the AGM.

The sum of these three elements represents the **maximum total direct remuneration** for the Senior Management.

Base Salary

The purpose of the base salary is to provide a fixed level of earnings and to attract and retain talent. It is a key component of overall remuneration, particularly as the short-term incentive is expressed as a percentage of base salary.

Short-term incentive

The short-term incentive based on the corporate EIP, entitles selected executives, including the members of Senior Management, to an annual short-term incentive. This short-term incentive is based upon the assessment of the achievement of individual, organizational and Company objectives that are set on an annual basis and focused on, *inter alia*, return on net assets, customer service, profit, cash flow and market share. The maximum amount awarded under the short-term incentive is based upon a percentage of the executive's salary and the overall achievement of the relevant objectives on an annual basis.

The 2024 short-term incentive includes a sustainability/corporate social responsibility index for Senior Management, as part of our efforts to include corporate social responsibility into the performance

framework of our Senior Management. For Executive Committee members and Executive Vice Presidents, the weight of the sustainability/corporate social responsibility index ranges between 5% and 10%. The sustainability / corporate social responsibility index is divided into four criteria related to health and safety, environment, diversity and inclusion, and people engagement.

For the 2024 short-term incentive, the sustainability/corporate social responsibility index was comprised of the following KPIs:

- health and safety: measured against, amongst others, the employee safety performance.
- environment/climate: measured against, amongst others, direct emissions (kCO2 equivalent).
- diversity and inclusion: measured against, amongst others, gender ratio among management levels.
- people management: measured against, amongst others, the employee survey (engagement index).

The weight of the sustainability/corporate social responsibility index is designed to remain stable over time, however the individual sub-components used to form the sustainability/corporate social responsibility index may evolve in the future to address sustainability priorities facing the Company and society.

Long-term incentive

The purpose of the long-term incentive, through the grant of stock awards, is to motivate the Senior Management to deliver long-term shareholder value through long-term profitability and share price growth.

In accordance with the current long-term incentive plan, and similar to the Managing Board, stock awards granted to members of our Senior Management under the long-term incentive plan vest over a three-year performance period, more specifically, the vesting of unvested stock awards in respect of:

- the Executive Committee, is subject to the achievement of performance conditions and calculated over a three-year performance period. Grants of unvested stock awards made in 2023 and 2024 will fully vest, subject to performance conditions, in 2026 and 2027 respectively, provided also that the eligible employee is still an employee of the Company at such time; and
- the Executive Vice Presidents, is subject to the achievement of performance conditions and calculated over a three-year performance period. Grants of unvested stock awards made in 2024 will fully vest, subject to performance conditions, in 2027, provided also that the eligible employee is still an employee of the Company at such time.

The Supervisory Board determines whether the performance criteria are met and concludes whether and to which extent all eligible employees are entitled to any stock awards under the long-term incentive plan.

From 2021, a new sustainability/corporate social responsibility index has been introduced among the performance conditions for the long-term incentive. For the 2024 long-term incentive, the sustainability/corporate social responsibility index was comprised of the following KPIs:

- environment/climate: measured against, amongst others, the direct emissions (kCO2 equivalent).
- diversity and inclusion: measured against, amongst others, gender ratio among management levels.
- ESG investor index: measured against, amongst others, the Dow Jones sustainability indices.
- carbon rating agency: measured against, amongst others, the Carbon Disclosure Project carbon rating.

The weight of the sustainability/corporate social responsibility index is designed to remain stable for future grants, however the individual sub-components used to form the sustainability/corporate social

responsibility index may evolve in the future to address sustainability priorities facing the Company and society.

Pension plan, life and medical insurance

Our Supervisory Board has approved the establishment of a complementary pension plan for certain key executives as selected by the members of our Managing Board, according to the general criteria of eligibility and service as determined by the Supervisory Board upon the proposal of its Compensation Committee. With respect to such complementary pension plan, we have set up an independent foundation under Swiss law which manages the plan and to which we make contributions. Pursuant to this plan, in 2024, we made a contribution of approximately \$1.35 million to the plan of the members of our Managing Board, and of \$1.18 million to the plan for all beneficiaries other than the members of our Managing Board. The amount of pension plan payments made for other beneficiaries, such as former employees retired in 2024 and/or no longer salaried in 2024, was \$1.1 million.

The members of our Senior Management, including the members of our Managing Board, were covered in 2024 under certain group life and medical insurance programs provided by us. The aggregate additional amount set aside by us in 2024 to provide pension, retirement or similar benefits to our Senior Management, including the members of our Managing Board, including the amounts allocated to the complementary pension plan described above, is estimated to have been approximately \$10.05 million, which includes statutory employer contributions for state run retirement, similar benefit programs and other miscellaneous allowances.

4.9.3.3. Compensation paid to the Senior Management in 2024, 2023 and 2022

Base salary

Over the last three years the base salary paid to the Senior Management (including the members of the Managing Board) is:

	2024 ⁽¹⁾	2023 ⁽²⁾	2022 ⁽³⁾
Senior Management base salary	\$18,264,979	\$19,225,024	\$20,848,371

- (1) Including the amounts paid in 2024 to our former President, Automotive and Discrete Group, Marco Monti, and our former Executive Vice President, Power Transistor subgroup within ST's Automotive and Discrete Group, Edoardo Merli, who left the Company in 2024. During 2024, our Senior Management consisted of 31 members.
- (2) Including amounts paid in 2023 to our former President, Technology, Manufacturing, Quality and Supply Chain, Orio Bellezza; former Executive Vice President Front-End Manufacturing, Analog and Power, Michael Hummel and former Executive Vice President, MEMS Sub-Group Analog, MEMS and Sensors Group, Andrea Onetti. During 2023, our Senior Management consisted of 34 members.
- (3) Including amounts paid in 2022 to our former Executive Vice President, Digital and Smart Power Technology and Digital Front-End Manufacturing, Joel Hartmann, and former Executive Vice President, General Manager, Sales and Marketing, Americas Region, Paul Cihak. During 2022, our Senior Management consisted of 33 members.

Short-term incentive

The amounts paid in 2024 to our Senior Management (including the members of the Managing Board) pursuant to the short-term incentive represented approximately 17.5% of the total compensation paid to our Senior Management and are further detailed below:

	Bonus paid in 2024 (2023 performance) ⁽¹⁾	Bonus paid in 2023 (2022 performance) ⁽²⁾	Bonus paid in 2022 (2021 performance) ⁽³⁾
Short-term incentive (cash) amount	\$ 18,891,495	\$ 19,654,870	\$ 17,557,713
Ratio short-term incentive / (base salary + short-term incentive)	50.84 %	50.55 %	45.72 %

- (1) Including amounts paid in 2024 to our former President, Automotive and Discrete Group, Marco Monti; our former President, Technology, Manufacturing, Quality and Supply Chain, Orio Bellezza; our former Executive Vice President, Power Transistor subgroup within ST's Automotive and Discrete Group, Edoardo Merli; our former Executive Vice President Front-End Manufacturing, Analog and Power, Michael Hummel.
- (2) Including amounts paid in 2023 to our former President, Technology, Manufacturing, Quality and Supply Chain, Orio Bellezza; former Executive Vice President Front-End Manufacturing, Analog and Power, Michael Hummel and former Executive Vice President, MEMS Sub-Group Analog, MEMS and Sensors Group, Andrea Onetti.
- (3) Including amounts paid in 2022 to our former Executive Vice President, Digital and Smart Power Technology and Digital Front-End Manufacturing, Joel Hartmann, and former Executive Vice President, General Manager, Sales and Marketing, Americas Region, Paul Cihak.

Long-term incentive

The second part of the variable component is the long-term incentive which links the long-term interests of the Senior Management with the shareholders' and investors' interests.

The amounts paid in 2024 to our Senior Management (including the member of the Managing Board, our President and Chief Executive Officer) pursuant to the long-term incentive represented approximately 38.91% of the total compensation paid to our Senior Management and are further detailed below:

	Long-term incentives paid in 2024 ⁽¹⁾	Long-term incentives paid in 2023 ⁽²⁾	Long-term incentives paid in 2022 ⁽³⁾
Long-term incentive amount	\$ 42,029,100	\$ 50,010,449	\$ 41,000,100
Ratio long-term incentive / base salary	230.11 %	260.13%	196.66%
Ratio long-term incentive / (short-term incentive + long term incentive)	68.99 %	71.79%	70.02%

- (1) Including amounts paid in 2024 to our former President, Automotive and Discrete Group, Marco Monti; our former President, Technology, Manufacturing, Quality and Supply Chain, Orio Bellezza; our former Executive Vice President, Power Transistor subgroup within ST's Automotive and Discrete Group, Edoardo Merli; our former Executive Vice President Front-End Manufacturing, Analog and Power, Michael Hummel.
- (2) Including amounts paid in 2023 to our former President, Technology, Manufacturing, Quality and Supply Chain, Orio Bellezza; former Executive Vice President Front-End Manufacturing, Analog and Power, Michael Hummel and former Executive Vice President, MEMS Sub-Group Analog, MEMS and Sensors Group, Andrea Onetti.
- (3) Including amounts paid in 2022 to our former Executive Vice President, Digital and Smart Power Technology and Digital Front-End Manufacturing, Joel Hartmann, and former Executive Vice President, General Manager, Sales and Marketing, Americas Region, Paul Cihak.

Total compensation

The following table sets forth the total amount paid as compensation in 2024, 2023 and 2022 to our Senior Management (including the members of the Managing Board) as of December 31 of each year, before applicable withholding taxes and social contributions:

Year	Base salary	Variable components		Other components ⁽¹⁾				Total	Fixed/ Variable remune- ration
		Short-term Incentives	Long-term Incentives	Benefits	Social security contri- butions	Pensions	Termination benefits		
2024 ⁽²⁾	\$18,264,979	\$18,891,495	\$42,029,100	\$2,280,421	\$12,560,478	\$2,530,968	\$11,434,984	\$107,992,426	43% fixed / 57% variable
2023 ⁽³⁾	\$19,225,024	\$19,654,870	\$50,010,449	\$1,659,639	\$10,555,981	\$1,474,372	\$6,203,607	\$108,783,942	36% fixed / 64% variable
2022 ⁽⁴⁾	\$20,848,371	\$17,557,713	\$41,000,100	\$1,706,799	\$10,468,677	\$1,498,828	\$2,284,907	\$95,365,395	39% fixed/ 61% variable

(1) There were no miscellaneous allowances in the years 2024, 2023 and 2022.

(2) Including amounts paid in 2024 to our former President, Automotive and Discrete Group, Marco Monti; our former President, Technology, Manufacturing, Quality and Supply Chain, Orio Bellezza; our former Executive Vice President, Power Transistor subgroup within ST's Automotive and Discrete Group, Edoardo Merli.

(3) Including amounts paid in 2023 to our former President, Technology, Manufacturing, Quality and Supply Chain, Orio Bellezza; former Executive Vice President Front-End Manufacturing, Analog and Power, Michael Hummel and former Executive Vice President, MEMS Sub-Group Analog, MEMS and Sensors Group, Andrea Onetti.

(4) Including amounts paid in 2022 to our former Executive Vice President, Digital and Smart Power Technology and Digital Front-End Manufacturing, Joel Hartmann, and former Executive Vice President, General Manager, Sales and Marketing, Americas Region, Paul Cihak.

We did not extend any loans or overdrafts to the members of our Managing Board, nor to any other member of our Senior Management. Furthermore, we have not guaranteed any debts or concluded any leases with the members of our Managing Board, nor with any other member of our Senior Management or their families.

For further details on the compensation of our Senior Management we also refer to Note 7.6.35 to our consolidated financial statements.

Senior Management (and the compensation related hereto in this Section 4.9.3.2. (*Managing Board remuneration - Senior Management remuneration - Senior Management remuneration structure*)) refers to:

- the members of the Managing Board;
- the members of the Executive Committee (including the members of the Managing Board) of the Company; and
- the Executive Vice Presidents of the Company.

We also include below, for comparative purposes in Section 4.9.3.3. below (i) compensation paid to the Executive Committee (excluding the members of the Managing Board,) in financial years 2024, 2023 and 2022, and in Section 4.9.3.4. (ii) compensation paid to the Executive Vice Presidents in financial years 2024, 2023 and 2022.

4.9.3.3. Compensation paid to the Executive Committee (excluding the members of the Managing Board)

Base salary

The base salary paid to the Executive Committee (excluding the members of the Managing Board) in financial years 2024, 2023 and 2022 is:

	2024 ⁽¹⁾	2023 ⁽²⁾	2022
Executive Committee base salary	\$ 5,952,378	\$ 6,782,818	\$ 7,001,152

- (1) Including amounts paid in 2024 to our President and Chief Financial Officer prior to his appointment as member of our Managing Board on May 22, 2024 and our former President, Automotive and Discrete Group, Marco Monti; our former President, Technology, Manufacturing, Quality and Supply Chain, Orio Bellezza.
- (2) Including amounts paid in 2023 to our former President, Technology, Manufacturing, Quality and Supply Chain, Orio Bellezza.

Short-term incentive

The amounts paid in financial years 2024, 2023 and 2022 to the Executive Committee (excluding the members of the Managing Board) pursuant to the short-term incentive are further detailed below:

	Bonus paid in 2024 (2023 performance) ⁽¹⁾	Bonus paid in 2023 (2022 performance) ⁽²⁾	Bonus paid in 2022 (2021 performance)
Short-term incentive (cash) amount	\$9,043,380	\$8,553,348	\$6,647,780
Ratio short-term incentive / (base salary + Short-term incentive)	60%	56%	49%

- (1) Including amounts paid in 2024 to our President and Chief Financial Officer prior to his appointment as member of our Managing Board on May 22, 2024 and our former President, Automotive and Discrete Group, Marco Monti; our former President, Technology, Manufacturing, Quality and Supply Chain, Orio Bellezza.
- (2) Including amounts paid in 2023 to our former President, Technology, Manufacturing, Quality and Supply Chain, Orio Bellezza.

Long-term incentive

The amounts paid in financial years 2024, 2023 and 2022 to the Executive Committee (excluding the members of the Managing Board) pursuant to the long-term incentive are further detailed below:

	Long-term incentives paid in 2024 ⁽¹⁾	Long-term incentives paid in 2023 ⁽²⁾	Long-term incentives paid in 2022
Long-term incentive amount	\$18,500,090	\$21,024,493	\$15,336,113
Ratio long-term incentive / base salary	311%	310%	219%
Ratio long-term incentive / (short-term incentive + long-term incentive)	67%	71%	70%

- (1) Including amounts paid in 2024 to our President and Chief Financial Officer prior to his appointment as member of our Managing Board on May 22, 2024 and our former President, Automotive and Discrete Group, Marco Monti; our former President, Technology, Manufacturing, Quality and Supply Chain, Orio Bellezza.
- (2) Including amounts paid in 2023 to our former President, Technology, Manufacturing, Quality and Supply Chain, Orio Bellezza.

Total Compensation

The following table sets forth the total amount paid as compensation in financial years 2024, 2023 and 2022, to the Executive Committee (excluding the members of the Managing Board) as of December 31, before applicable withholding taxes and social contributions:

Year	Base salary	Variable components		Other components ⁽¹⁾				Total	Fixed/ Variable remuneration
		Short-term Incentives	Long-term Incentives	Benefits	Social security contributions	Pensions	Termination benefits		
2024 ⁽²⁾	\$5,952,378	\$9,043,380	\$18,500,090	\$1,422,244	\$4,639,390	\$1,184,059	\$7,795,680	\$48,537,220	43% fixed/ 57% variable
2023 ⁽³⁾	\$6,782,818	\$8,553,348	\$21,024,493	\$879,991	\$3,612,613	\$1,038,655	\$2,638,475	\$44,530,393	34% fixed/ 66% variable
2022	\$7,001,152	\$6,647,780	\$15,336,113	\$958,896	\$2,723,709	\$1,046,598	\$283,494	\$33,997,741	35% fixed/ 65% variable

- (1) There were no miscellaneous allowances in the years 2024, 2023 and 2022.
(2) Including amounts paid in 2024 to our President and Chief Financial Officer prior to his appointment as member of our Managing Board on May 22, 2024 and our former President, Automotive and Discrete Group, Marco Monti; our former President, Technology, Manufacturing, Quality and Supply Chain, Orio Bellezza.
(3) Including amounts paid in 2023 to our former President, Technology, Manufacturing, Quality and Supply Chain, Orio Bellezza.

4.9.3.4. Compensation paid to the Executive Vice Presidents

The base salary paid to the Executive Vice Presidents in financial years 2024, 2023 and 2022 is:

	2024 ⁽¹⁾	2023 ⁽²⁾	2022 ⁽³⁾
Executive Vice Presidents base salary	\$10,554,925	\$11,228,661	\$12,596,266

- (1) Including amounts paid in 2024 to our former Executive Vice President, power transistor subgroup within ST's Automotive and Discrete group Edoardo Merli.
(2) Including amounts paid in 2023 to our former Executive Vice President Front-End Manufacturing, Analog and Power, Michael Hummel and former Executive Vice President, MEMS Sub-Group Analog, MEMS and Sensors Group, Andrea Onetti.
(3) Including amounts paid in 2022 to our former Executive Vice President, Digital and Smart Power Technology and Digital Front-End Manufacturing, Joel Hartmann, and former Executive Vice President, General Manager, Sales and Marketing, Americas Region, Paul Cihak.

Short-term incentive

The amounts paid in financial years 2024, 2023 and 2022 to the Executive Vice Presidents pursuant to the short-term incentive are further detailed below:

	Bonus paid in 2024 (2023 performance) ⁽¹⁾	Bonus paid in 2023 (2022 performance) ⁽²⁾	Bonus paid in 2022 (2021 performance) ⁽³⁾
Short-term incentive (cash) amount	\$7,389,370	\$8,282,397	\$8,403,357
Ratio short-term incentive / (base salary + Short-term incentive)	41%	42%	40%

- (1) Including amounts paid in 2024 to our former Executive Vice President, Power Transistor subgroup within ST's Automotive and Discrete Group Edoardo Merli; and our former Executive Vice President Analog and Power Front-End Manufacturing, Michael Hummel.

- (2) Including amounts paid in 2023 to our former Executive Vice President Front-End Manufacturing, Analog and Power, Michael Hummel and former Executive Vice President, MEMS Sub-Group Analog, MEMS and Sensors Group, Andrea Onetti.
- (3) Including amounts paid in 2022 to our former Executive Vice President, Digital and Smart Power Technology and Digital Front-End Manufacturing, Joel Hartmann, and former Executive Vice President, General Manager, Sales and Marketing, Americas Region, Paul Cihak.

Long-term incentive

The amounts paid in financial years 2024, 2023 and 2022 to the Executive Vice Presidents pursuant to the long-term incentive are further detailed below:

	Long-term incentives paid in 2024 ⁽¹⁾	Long-term incentives paid in 2023 ⁽²⁾	Long-term incentives paid in 2022 ⁽³⁾
Long-term incentive amount	\$19,273,622	\$27,147,593	\$23,620,775
Ratio long-term incentive / base salary	183%	242%	188%
Ratio long-term incentive / (short-term incentive + long-term incentive)	72%	77%	74%

- (1) Including amounts paid in 2024 to to our former Executive Vice President, Power Transistor subgroup within ST's Automotive and Discrete Group Edoardo Merli; and our former Executive Vice President Analog and Power Front-End Manufacturing, Michael Hummel.
- (2) Including amounts paid in 2023 to our former Executive Vice President Front-End Manufacturing, Analog and Power, Michael Hummel and former Executive Vice President, MEMS Sub-Group Analog, MEMS and Sensors Group, Andrea Onetti.
- (3) Including amounts paid in 2022 to our former Executive Vice President, Digital and Smart Power Technology and Digital Front-End Manufacturing, Joel Hartmann, and former Executive Vice President, General Manager, Sales and Marketing, Americas Region, Paul Cihak.

Total Compensation

The following table sets forth the total amount paid as compensation in financial years 2024, 2023 and 2022, to the Executive Vice Presidents as of December 31 of each year, before applicable withholding taxes and social contributions:

Year	Base salary	Variable components		Other components ⁽¹⁾			Total	Fixed/ Variable remuneration
		Short-term Incentives	Long-term Incentives	Benefits	Social security contributions	Termination benefits		
2024 ⁽²⁾	\$10,554,925	\$7,389,370	\$19,273,622	\$669,443	\$6,661,794	\$3,639,304	\$48,188,459	45% fixed / 55% variable
2023 ⁽³⁾	\$11,228,661	\$8,282,397	\$27,147,592	\$661,911	\$6,066,240	\$3,565,132	\$56,951,933	38% fixed / 62% variable
2022 ⁽⁴⁾	\$12,596,266	\$8,403,357	\$23,620,775	\$639,879	\$6,887,522	\$2,001,414	\$54,149,213	41% fixed / 59% variable

- (1) There were no miscellaneous allowances in the years 2024, 2023 and 2022.
- (2) Including amounts paid in 2024 to our former Executive Vice President, Power Transistor subgroup within ST's Automotive and Discrete Group Edoardo Merli; and our former Executive Vice President Analog and Power Front-End Manufacturing, Michael Hummel.
- (3) Including amounts paid in 2023 to our former Executive Vice President Front-End Manufacturing, Analog and Power, Michael Hummel and former Executive Vice President, MEMS Sub-Group Analog, MEMS and Sensors Group, Andrea Onetti.
- (4) Including amounts paid in 2022 to our former Executive Vice President, Digital and Smart Power Technology and Digital Front-End Manufacturing, Joel Hartmann, and former Executive Vice President, General Manager, Sales and Marketing, Americas Region, Paul Cihak.

4.9.4. Remuneration comparison between the Managing Board, the Executive Committee (excluding the members of the Managing Board), the Executive Vice Presidents and indirect employees)

Set forth in the following table is the annual change over the last five years of (i) the remuneration of the members of the Managing Board, (ii) the remuneration of the Executive Committee (excluding the members of the Managing Board), (iii) the remuneration of the Executive Vice Presidents, (iv) the average remuneration of all our indirect employees other than the members of our Senior Management, including the members of the Managing Board, and (v) the performance of the Company (based on US GAAP where relevant). The average is calculated by taking the sum of remuneration costs and dividing by the average number of full-time equivalent indirect employees over the period. The table below also shows the pay ratio between our Managing Board, the Executive Committee (excluding the members of the Managing Board), the Executive Vice Presidents and our indirect employees.

	2024	2023	2022	2021	2020
Managing Board remuneration					
Total remuneration of the members of the Managing Board (A) (amounts in thousands) ⁽¹⁾	\$11,267	\$7,302	\$7,218	\$7,559	\$5,739
Evolution of the remuneration of the members of the Managing Board	54%	1%	(5)%	32%	(26)%
Executive Committee (excluding the members of the Managing Board) remuneration					
Average remuneration of the Executive Committee (excluding the members of the Managing Board) (B) (amounts in thousands) ⁽²⁾⁽³⁾	\$6,067	\$4,948	\$4,250	\$4,381	\$3,555
Evolution of average remuneration of the Executive Committee (excluding the members of the Managing Board) ⁽¹⁰⁾	23%	16%	(3)%	23%	40%
Ratio A versus B	1.86	1.48	1.70	1.73	1.61
Executive Vice Presidents remuneration					
Average remuneration of the Executive Vice Presidents (C) (amounts in thousands) ⁽⁴⁾⁽⁵⁾⁽⁶⁾	\$2,095	\$2,373	\$2,256	\$2,779	\$2,066
Evolution of the average remuneration of the Executive Vice Presidents	(12)%	5%	(19)%	34%	29%
Ratio A versus C	5.38	3.08	3.2	2.72	2.78
Employee remuneration⁽⁷⁾					
Average remuneration of all global indirect employees (FTE basis) (D) ⁽⁸⁾	\$114,400	\$114,100	\$109,600	\$111,200	\$98,500
Evolution of the average remuneration of all global indirect employees (FTE basis) ⁽⁸⁾	—%	4%	(1)%	13%	1%
Ratio A versus D ⁽⁹⁾	98.49	64.0	65.9	68.0	58.2
Ratio B versus D	53.03	43.4	38.8	39.4	36.1
Ratio C versus D	18.31	20.8	20.6	25.0	21.0
Company's performance					
Net revenues (amounts in thousands)	\$13,269	\$17,286	\$16,128	\$12,761	\$10,219
Evolution of the revenues	(23)%	7%	26%	25%	7%
Operating income (amounts in thousands)	\$1,676	\$4,611	\$4,439	\$2,419	\$1,323
Evolution of the Operating income	(64)%	4%	84%	83%	10%

(1) Total Managing Board remuneration for 2022 and 2023 includes the remuneration to the, at that time, sole member of our Managing Board, whereas the total Managing Board remuneration for 2024 includes the remuneration of the President and Chief Executive Officer and the remuneration of the President and Chief Financial Officer as per his appointment to the Managing Board on May 22, 2024.

- (2) Average remuneration of our Executive Committee includes amounts paid in 2024 to our Chief Financial Officer before his appointment to the Managing Board, our former President, Automotive and Discrete Group, Mario Monti and 2024 / 2023 to our former President, Technology, Manufacturing, Quality and Supply Chain, Orio Bellezza.
- (3) Average remuneration of our Executive Committee includes amounts paid in 2021 to our former President, Analog, MEMS and Sensors Group, Benedetto Vigna.
- (4) Average remuneration of our Executive Vice Presidents includes amounts paid in 2024 to our former Executive Vice President Power Transistor and Discrete Group Edoardo Merli and for 2024 and 2023 to our former Executive Vice President Front-End Manufacturing, Analog and Power, Michael Hummel and former Executive Vice President, MEMS Sub-Group Analog, MEMS and Sensors Group, Andrea Onetti.
- (5) Average remuneration of our Executive Vice Presidents includes amounts paid in 2022 to our former Executive Vice President, Digital and Smart Power Technology and Digital Front-End Manufacturing, Joel Hartmann, and former Executive Vice President, General Manager, Sales and Marketing, Americas Region, Paul Cihak.
- (6) Average remuneration of our Executive Vice Presidents includes amounts paid in 2021 to our former Executive Vice President Europe and France Public Affairs, Thierry Tingaud.
- (7) Employee remuneration is defined as all remuneration paid to our indirect employees including base salary, variable compensation in both cash and shares, social premiums, pension, expense allowances and benefits in kind. The average is calculated by taking the sum of remuneration costs and dividing by the average number of full-time equivalent indirect employees over the period.
- (8) Global indirect employees are all employees other than those directly manufacturing our products, excluding Senior Management. "FTE" refers to full time equivalent.
- (9) Although the ratio between the remuneration of the members of the managing board and the global indirect employees as displayed in this table is similar to the so-called Excessive CEO pay ratio as referred to in S1-16 paragraph 97(b) of the ESRS. The calculation methodologies used are different. The ratio included in this table is calculated by taking into account the average remuneration of the members of the managing board and the average remuneration of the global indirect employees. The Excessive CEO pay ratio included in the ESRS and disclosed in Section 4.9.2. (*Remuneration Report - Managing Board remuneration*), is calculated in accordance with S1 AR 101 of the ESRS by taking into consideration the annual total remuneration of our highest paid individual and the median employee annual total remuneration.
- (10) Variation in 2024 is mainly driven by the termination benefits granted in that specific year and share price increase for long-term incentive pay-out. For further detail reference is made to Section 4.9.3.3 (*Remuneration Report - Senior Management remuneration - Senior Management remuneration structure*)

4.9.5 Share ownership

None of the members of our Supervisory Board, Managing Board or Senior Management holds shares or options to acquire shares representing more than 1% of our issued share capital.

4.9.6. Stock awards and options

Our stock-based compensation plans are designed to incentivize, attract and retain our executives and key employees by aligning compensation with our performance and the evolution of our share price. Since 2005, we have adopted long-term incentive plans based on stock awards for our management as well as key employees. Furthermore, until 2012, the Compensation Committee (on behalf of the Supervisory Board and with its approval) granted stock-based awards (the options to acquire common shares in the share capital of the Company) to the members and professionals of the Supervisory Board.

Pursuant to the shareholders' resolutions adopted by our general meetings of shareholders, our Supervisory Board, upon the proposal of the Managing Board and the recommendation of the Compensation Committee, took the following actions:

- approved conditions relating to our 2024 unvested stock award allocation under the 2021 Unvested Stock Award Plan, including restriction criteria linked to our performance (for selected employees);
- approved conditions relating to our 2023 unvested stock award allocation under the 2021 Unvested Stock Award Plan, including restriction criteria linked to our performance (for selected employees); and

- approved conditions relating to our 2022 unvested stock award allocation under the 2021 Unvested Stock Award Plan, including restriction criteria linked to our performance (for selected employees).

The sale or purchase of shares of our stock by the members or professionals of our Supervisory Board, the members of our Managing Board, and all our employees are subject to an internal policy which involves, *inter alia*, certain blackout periods.

5. Corporate Governance

5.1. Commitment to the principles of good corporate governance

Our consistent commitment to good corporate governance principles is evidenced by:

- our corporate organization under Dutch law that entrusts our management to a Managing Board acting under the supervision and control of a Supervisory Board totally independent from the Managing Board. Members of our Managing Board and of our Supervisory Board are appointed and dismissed by our shareholders;
- our early adoption of policies on important issues such as business ethics and conflicts of interest and strict policies to comply with applicable regulatory requirements concerning financial reporting, insider trading and public disclosures;
- our compliance with Dutch securities laws, because we are a company incorporated under the laws of The Netherlands, and, as applicable, our compliance with American, French and Italian securities laws, because our shares are listed in these jurisdictions, in addition to our compliance with the corporate, social and financial laws applicable to our subsidiaries in the countries in which we do business;
- our broad-based activities in the field of corporate social responsibility, encompassing environmental, social, health, safety, educational and other related issues including our corporate governance statement which evidences our policy objectives with respect to diversity as well as the results of implementing our diversity policy for the year ended December 31, 2024;
- our implementation of a non-compliance reporting channel (managed by an independent third-party). We encourage everyone, including external business partners, to express, in good faith, any concerns they might have regarding possible violations of our Code of Conduct, our policies, or the law (including, without limitations, any concerns regarding accounting, internal controls or auditing matters). Our Speak-up Policy is communicated to all employees and includes, in addition to internal local and corporate reporting channels, an independent multilingual Ethics Hotline;
- our Corporate Ethics Committee and Local Ethics Committees, whose mandate is to provide support to our management in its efforts to foster a business ethics culture consistent across regions, functions and organizations;
- our Chief Compliance and Ethics Officer, who reports to our Chief Executive Officer, also acts as Executive Secretary to our Supervisory Board, and is jointly responsible with our Chief Audit and Risk Executive for our Ethics Hotline and related investigations; and
- our Chief Audit and Risk Executive, who reports directly to our Audit Committee for Internal Audit and directly to our Chief Financial Officer for ERM and Resilience (business continuity and crisis management), is also jointly responsible with our Chief Compliance and Ethics Officer for our Ethics Hotline and related investigations.

As a Dutch listed company, we are subject to the Dutch Corporate Governance Code, which is publicly available at www.mccg.nl. We are committed to informing our shareholders of any significant changes in our corporate governance policies and practices at our AGM. Along with our Supervisory Board charter

(which we last updated in April 2022 and which also includes the charters of our Supervisory Board committees) and our Code of Conduct, the current version of our Corporate Governance Charter is posted on our website (investors.st.com), and these documents are available in print to any shareholder who may request them.

As required by article 2:391(5) jo. article 3(1) of the Decree on the content of the management report and the Dutch Corporate Governance Code, our Corporate Governance Charter includes information on the broad outline of our corporate governance structure and our compliance with the Dutch Corporate Governance Code.

Our Supervisory Board is carefully selected based upon the combined experience and expertise of its members. In fulfilling their duties under Dutch law, Supervisory Board members serve the best interests of the Company and its business, taking into consideration the interests of all our shareholders and other stakeholders, and must act independently in their supervision of our management. Our Supervisory Board has adopted criteria to assess the independence of its members in accordance with corporate governance listing standards of the New York Stock Exchange.

Our Supervisory Board has on various occasions discussed Dutch corporate governance standards, the implementing rules and corporate governance standards of the SEC and of the New York Stock Exchange, as well as other corporate governance standards. The Supervisory Board has determined, based on the evaluations by an ad hoc committee, the following independence criteria for its members: Supervisory Board members must not have any material relationship with STMicroelectronics N.V., or any of our consolidated subsidiaries, or our management. A “material relationship” can include commercial, industrial, banking, consulting, legal, accounting, charitable and familial relationships, among others, but does not include a relationship with direct or indirect shareholders.

We believe we are fully compliant with all material corporate governance standards of the New York Stock Exchange, to the extent possible for a Dutch company listed on Euronext Paris, Borsa Italiana, as well as the New York Stock Exchange.

Because we are a Dutch company, the Audit Committee is an advisory committee to the Supervisory Board, which reports to the Supervisory Board, and our general meeting of shareholders appoints our statutory auditors. Our Audit Committee has established a charter outlining its duties and responsibilities with respect to, among others, the monitoring of our accounting, auditing, financial reporting and the appointment, retention and oversight of our external auditors. In addition, our Audit Committee has established procedures for the receipt, retention and treatment of complaints regarding accounting, internal accounting controls or auditing matters, and the confidential anonymous submission by our employees regarding questionable accounting or auditing matters.

Pursuant to our Supervisory Board charter, the Supervisory Board is responsible for handling and deciding on potential reported conflicts of interests between the Company and members of the Supervisory Board, as well as the Managing Board.

The members of our Managing Board may not serve on the board of a public company without the prior approval of our Supervisory Board. Pursuant to the Supervisory Board charter, the members of our Managing Board must inform our Supervisory Board of any (potential) conflict of interest and pursuant to such charter and Dutch law, any Managing Board resolution regarding a transaction in relation to which the members of our Managing Board have a conflict of interest must be approved and adopted by our Supervisory Board. Should our entire Supervisory Board also have a conflict of interest, the resolution must be adopted by our shareholders’ meeting pursuant to Dutch law. We are not aware of any potential conflicts of interests between the private interest or other duties of our Managing Board members and our senior managers and their duties to us.

5.2. General meeting of shareholders

Our ordinary general meetings of shareholders are held at least annually, within six months after the close of each financial year, in Amsterdam, Haarlemmermeer (Schiphol Airport), Rotterdam or The Hague, The

Netherlands. Extraordinary general meetings of shareholders may be held as often as our Supervisory Board deems necessary, and must be held upon the written request of registered shareholders or other persons entitled to attend general meetings of shareholders of at least 10% of the total issued share capital to our Managing Board or our Supervisory Board specifying in detail the business to be dealt with. Such written requests may not be submitted electronically. If the Managing Board or the Supervisory Board does not convene the general meeting of shareholders within six weeks of such a request, the aforementioned shareholders or individuals may be authorized by a competent judicial authority.

Notice of general meetings of shareholders shall be given by our Managing Board or by our Supervisory Board or by those who according to the law or our Articles of Association are entitled thereto. The notice shall be given in such manner as shall be authorized or required by law (including but not limited to a written notice, a legible and reproducible message sent by electronic means and an announcement published by electronic means), as well as in accordance with the regulations of a stock exchange where our shares are officially listed at our request. In addition, shareholders and other persons entitled to attend our General Meetings of Shareholders that are registered in our share register shall be notified by letter that the meeting is being convened. The notice convening our general meeting of shareholders shall be given with due observance of the statutory notice period, which is currently 42 days prior to the meeting.

The notice of our general meeting of shareholders states the business to be transacted as well as other information prescribed by law and our Articles of Association. The agenda is fixed by the author of the notice of the meeting; however, one or more shareholders or other persons entitled to attend general meetings of shareholders representing at least one-tenth of our issued share capital may, provided that the request was made at least five days prior to the date of convocation of the meeting, request that proposals be included on the agenda. Notwithstanding the previous sentence, proposals of persons who are entitled to attend general meetings of shareholders will be included on the agenda, if such proposals are made in writing to our Managing Board within a period of sixty days before that meeting by persons who are entitled to attend our General Meetings of Shareholders who, solely or jointly, represent at least 1% of our issued share capital or a market value of at least €50 million. The requests referred to in the previous two sentences may not be submitted electronically. The aforementioned requests must comply with conditions stipulated by our Managing Board, subject to the approval of our Supervisory Board, which shall be posted on our website. Pursuant to Dutch law, a shareholder requesting discussion of an agenda item must disclose to us its entire beneficial interest (long and short position). We are required to disclose this interest on our website.

Dutch law prescribes a fixed registration date of 28 days prior to the date of the General Meeting of Shareholders, which means that shareholders and other persons entitled to attend our General Meetings of Shareholders are those persons who have such rights at such date and, as such, are registered in a register designated by our Managing Board, regardless of who is a shareholder or otherwise a person entitled to attend our general meeting of shareholders at the time of the meeting if a registration date would not be applicable.

Unless otherwise required by our Articles of Association or Dutch law, resolutions of our General Meetings of Shareholders require the approval of a majority of the votes cast at a meeting at which at least fifteen percent of the issued and outstanding share capital is present or represented. If a quorum is not present, a further meeting can be convened which shall be entitled, irrespective of the share capital represented, to pass a resolution. We may not vote our shares held in treasury. Blank and invalid votes shall not be counted.

In general, the most important items of our General Meetings of Shareholders are:

- the adoption of our annual accounts;
- the adoption of a dividend;
- the discharge of the members of our Managing Board and Supervisory Board;
- the adoption of the compensation policy of our Managing Board;

- the determination of the compensation of the members of our Supervisory Board;
- the appointment, suspension and dismissal of the members of our Managing Board;
- the appointment, suspension and dismissal of the members of our Supervisory Board;
- the appointment of our auditors;
- the authorization to our Managing Board to repurchase shares;
- the issuance of shares and the granting of rights to subscribe for shares (option rights) as well as the delegation of these authorities to our Supervisory Board;
- approving resolutions of our Managing Board as referred to below under “Managing Board”; and
- resolutions regarding the amendment of our Articles of Association, our liquidation, legal merger and legal demerger.

Under Dutch law, our general meeting of shareholders has the authority to adopt our statutory annual accounts as prepared by our Managing Board. Our general meeting of shareholders does not have the authority to amend our statutory annual accounts as prepared by our Managing Board. Our general meeting of shareholders can:

- i. either adopt our statutory annual accounts in the form as prepared by our Managing Board; or
- ii. instruct our Managing Board to amend our statutory annual accounts before adopting these annual accounts; or
- iii. not adopt the statutory annual accounts.

If our general meeting of shareholders instructs our Managing Board to amend our statutory annual accounts, our Managing Board is required to make the necessary amendments, unless the instruction contravenes the provisions of reasonableness and fairness (*redelijkheid en billijkheid*). Furthermore, the instruction must not contravene with the applicable presentation rules for the statutory annual accounts, including requirements of consistency and balance continuity. If there are multiple options, our general meeting of shareholders is authorized to decide with due observance of said limits.

If there are doubts regarding the correctness of our statutory annual accounts, the annual report and the other information, a petition for revision of our statutory annual accounts can be filed with the Enterprise Chamber (*Ondernemingskamer*) of the Amsterdam Court of Appeal in The Netherlands by each interested party on the basis of non-compliance with the applicable presentation requirements for the statutory annual accounts, the annual report and/or the other information prescribed by the EU IFRS regime, Title 9 of Book 2 of the Dutch Civil Code and/or the Dutch Financial Markets Supervision Act (*Wet op het financieel toezicht*). The petition must state in which respect the documents require revision. The petition can also be filed by the Advocate General (*advocaat-generaal*) of the Amsterdam Court of Appeal on the basis of public interest as well as the AFM with due observance of Section 4 of the Dutch Financial Markets Supervision Act.

5.3. Supervisory Board

Our Supervisory Board advises our Managing Board and is responsible for supervising the policies pursued by our Managing Board, the manner in which the Managing Board implements the sustainable long-term value creation strategy and the general course of our affairs and business. Our Supervisory Board consists of such number of members as is resolved by our general meeting of shareholders upon a non-binding proposal of our Supervisory Board, with a minimum of six members. Decisions by our shareholders concerning the number and the identity of our Supervisory Board members are taken by a simple majority of the votes cast at a meeting, provided quorum conditions are met.

Under Dutch law, certain statutory provisions limit the number of supervisory positions that members of our Supervisory Board may hold. A member of our Supervisory Board can only be appointed as such if

he/she does not hold more than four supervisory positions at other so-called "large" Dutch entities. In this connection, the position of chairman equals two positions. The term supervisory position means the position of supervisory director or non-executive director. Supervisory positions at several entities belonging to the same group constitute one position, and supervisory positions at non-Dutch entities are not taken into account. Furthermore, an appointment by the Enterprise Chamber (*Ondernemingskamer*) of the Amsterdam Court of Appeal as part of corporate inquiry proceedings is not taken into account. For purposes of the foregoing, "large" Dutch entities are Dutch limited liability companies, private companies with limited liability and foundations which meet at least two of the following three criteria ("Large Dutch Entities"): (i) the value of the assets according to the consolidated statement of financial position with explanatory notes exceeds €20 million; (ii) the net turnover for the financial year exceeds €40 million; or (iii) there are, on average, 250 or more employees during the financial year.

In The Netherlands, companies such as ours are expected to pursue a policy of having a balanced participation by men and women in supervisory boards. We have balanced participation by men and women on our Supervisory Board and currently, our Supervisory Board comprises nine members of which 4 are female and 5 are male.

In accordance with the criteria as reflected in our Supervisory Board charter and diversity policy, members of our Supervisory Board are selected on the basis of their specific business, financial, technical and/or legal expertise, prior professional experience, soundness of judgment, ability to make analytical enquiries and willingness to devote the time required to adequately perform their activities as Supervisory Board members. The object of our diversity policy is to have a diverse composition of our Supervisory Board in the areas that are relevant to us, such as nationality, experience, background, gender and age. Our Supervisory Board endorses the principle of a diversified Supervisory Board, including the aforementioned statutory gender balance rules, within the scope of the criteria as reflected in our Supervisory Board charter and diversity policy. We will continue to ensure an appropriate balance as recommended by the aforementioned statutory gender balance rules. The Supervisory Board meets the other criteria as set forth in their Charter as well, resulting in a diversified composition of the Supervisory Board.

The responsibilities of our Supervisory Board include (but are not limited to):

- supervising, monitoring, and advising our Managing Board on: (i) our performance, (ii) our strategy and risks inherent to our business activities, (iii) the structure and management of the internal risk management and control systems, and (iv) compliance with legislation and regulations;
- disclosing, complying with and enforcing our corporate governance structure;
- selecting and recommending the appointment of the member(s) of the Managing Board;
- proposing the compensation policy for the member(s) of our Managing Board (such policy to be adopted by our General Meeting of Shareholders), fixing the compensation annually and the contractual terms and conditions of employment of the member(s) of our Managing Board (in accordance with the said compensation policy);
- electing and recommending the appointment of the members of our Supervisory Board and proposing their remuneration;
- evaluating and assessing the functioning of our Managing Board, our Supervisory Board, and their individual members (including the evaluation of our Supervisory Board's profile and the introduction, education and training program);
- handling, and deciding on, potential reported conflicts of interest between us on the one hand and members of our Supervisory Board, our Managing Board, our external auditor and our (major) shareholder(s) on the other hand;
- selecting and recommending the appointment of our external auditor upon proposal by our Audit Committee;

- reviewing and approving our whistleblower procedures upon approval by the Audit Committee;
- handling, and deciding on, reported alleged irregularities that relate to the functioning of our Managing Board;
- approving decisions by our Managing Board as referred above under “Managing Board”;
- supervising the adoption and implementation by our Managing Board on a consolidated basis of strategic pluri-annual plans and annual budgets in line with the decisions of our Supervisory Board;
- on an annual basis, the renewal of the authorization by our Managing Board to issue guarantees to companies whose accounts are consolidated by us, as well as guarantees granted to third parties including nonconsolidated subsidiaries of us; and
- declaring independently as well as proposing to our general meeting of shareholders to declare, distributions out of our share premium reserve and other reserves available for shareholder distributions under Dutch law.

Our Supervisory Board charter, as posted on our website, contains detailed provisions on the reporting and handling of (potential) conflicts of interest.

For information on the identity of our Supervisory Board members, including its committees, as well as the compensation of the members of our Supervisory Board, see the report of our Supervisory Board. We believe that at least one member of our Supervisory Board can be regarded as a financial expert.

For information on the role and identity of the committees of our Supervisory Board, see the report of our Supervisory Board.

5.4. Managing Board

In accordance with Dutch law, our management is entrusted to the Managing Board under the supervision of our Supervisory Board. Mr. Jean-Marc Chery and Mr. Lorenzo Grandi are currently the members of our Managing Board with the functions of President and Chief Executive Officer and President and Chief Financial Officer. Under our Articles of Association, the members of our Managing Board are appointed for a three-year term, upon a non-binding proposal by our Supervisory Board, at our AGM (by a simple majority of the votes cast, provided quorum conditions are met), which term may be renewed one or more times.

In The Netherlands, companies such as ours are expected to pursue a policy of having a balanced participation by men and women in managing boards. Where seats on a managing board are to be divided among individuals, balanced participation is deemed to exist if at least 30% of the seats are taken by men and at least 30% by women. While as of our 2024 AGM our Managing Board consists of two members, since its creation in 1987, our Managing Board has always been comprised of a sole member, and therefore we have not yet put in place a diversity policy for our Managing Board.

Our shareholders may suspend or dismiss one or more members of our Managing Board, in accordance with the procedures laid down in our Articles of Association. Under Dutch law, our Managing Board is entrusted with our general management and the representation of our Company. Our Managing Board must seek prior approval from our shareholders for decisions regarding a significant change in the identity or nature of the Company. Under our Articles of Association and our Supervisory Board charter, our Managing Board must also seek prior approval from our Supervisory Board for certain other decisions with regard to the Company and our direct or indirect subsidiaries.

The members of our Managing Board may not serve on the board of a public company without the prior approval of our Supervisory Board. Pursuant to our Supervisory Board charter, the members of our Managing Board must inform our Supervisory Board of any (potential) conflict of interest and pursuant to such charter and Dutch law, any Managing Board resolution regarding a transaction in relation to which the members of our Managing Board have a conflict of interest must be approved and adopted by our

Supervisory Board. Should our entire Supervisory Board also have a conflict of interest, the resolution must be adopted by our shareholders pursuant to Dutch law. Note 7.6.37 of our consolidated financial statements includes a table summarizing related party transactions. We are not aware of any potential conflicts of interests between the private interest or other duties of our Supervisory Board members, our Managing Board members and our senior managers and their duties to us that were of material significance to the Company, or to the relevant member of the Supervisory Board, to the relevant member of the Managing Board, or to any of our senior managers. All transactions with related parties have been taken place at arms' length and were in compliance with best practice provision 2.7.4 of the Dutch Corporate Governance Code.

Pursuant to our Articles of Association and the Supervisory Board charter, the following decisions by our Managing Board with regard to the Company and any of our direct or indirect subsidiaries (an "ST Group Company") require prior approval from our Supervisory Board: (i) any modification of our or any ST Group Company's Articles of Association or other constitutional documents, other than those of wholly owned subsidiaries; (ii) other than for wholly owned subsidiaries, any change in our or any ST Group Company's authorized share capital or any issue, acquisition or disposal by us — with the exception of shares in our share capital acquired in order to transfer these shares under employee stock option or stock purchase plans — or any ST Group Company of own shares or change in share rights and any issue of instruments resulting in a share in the capital of any ST Group Company or its profits (iii) the liquidation or dissolution of the Company or any ST Group Company or the disposal of all or a substantial and material part of our business or assets, or those of any ST Group Company, or of any shares in any ST Group Company; (iv) any merger, acquisition or joint venture agreement (and, if substantial and material, any agreement relating to IP) to which we or any ST Group Company is, or is proposed to be, a party, as well as the formation of new companies by us or any ST Group Company (with the understanding that only acquisitions above \$25 million per transaction are subject to prior Supervisory Board approval); (v) our draft consolidated statement of financial position and consolidated financial statements, as well as our and any ST Group Company's profit distribution policies; (vi) entering into any agreement that may qualify as a related party transaction, including any agreement between us or any ST Group Company and any of our major shareholders; (vii) the appointment of members of the Executive Committee; (viii) the key parameters of our pluri-annual plans and our consolidated annual budgets, as well as any significant modifications to said plans and budgets, or any one of the matters set forth in our Articles of Association and not included in the approved plans or budgets; (ix) operations which have to be submitted for Supervisory Board prior approval even if their financing was already provided for in the approved annual budget; (x) our quarterly, semi-annual and annual consolidated financial statements prepared in accordance with U.S. GAAP and, as required, according to IFRS; (xi) the exercise of any shareholder right in a ST joint venture company, which is a company (a) with respect to which we hold directly or indirectly either a minority equity position in excess of 25% or a majority position without the voting power to adopt extraordinary resolutions, or (b) in which we directly or indirectly participate and such participation has a value of at least one-third of our total assets according to the Consolidated Statement of Financial Position and notes thereto in our most recently adopted (statutory) annual accounts, with the understanding, for the avoidance of doubt, that decisions of the Managing Board regarding the general management and/or operations of such ST joint venture company are not subject to Supervisory Board approval and that the Managing Board reports to the Supervisory Board on the operations of the ST joint venture companies as part of its regular reporting to the Supervisory Board and in principle at least every six months; (xii) the strategy of our company; (xiii) the annual internal audit plan and the appointment, replacement, reassignment and dismissal of our Chief Audit and Risk Executive; (xiv) all proposals to be submitted to a vote at the AGM; (xv) the formation of all companies, acquisition or sale of any participation and conclusion of any cooperation and participation agreement; (xvi) all our pluri-annual plans and the budget for the coming year (covering investment policy, policy regarding R&D, and commercial policy and objectives, general financial policy and policy regarding personnel); and (xvii) all acts, decisions or operations covered by the foregoing and constituting a significant change with respect to decisions already approved by the Supervisory Board or not provided for in the above list and as specifically laid down by a Supervisory Board resolution to that effect.

Senior Management

General management of our business

The members of our Managing Board are entrusted with our general management and is supported in his tasks by our Executive Committee and Executive Vice Presidents, who together constitute our Senior Management.

As a company committed to good governance, we hold corporate meetings on a regular basis. Such meetings, which involve the participation of several members of our Senior Management include:

- Executive Committee, which meets once every month and oversees the general strategy and is responsible for the risk management of the Company.
- Corporate Operations Review, which meets twice per quarter to review monthly results, short-term forecasts and monthly business results.
- Corporate Staff Meeting, which meets once per quarter to review the business in its entirety and to plan and forecast for the next quarter and beyond.

Executive Committee

The Executive Committee acts under the authority and responsibility of the Managing Board and in this respect manages the Company. The Managing Board remains legally responsible for the management of the Company. The responsibilities of the Executive Committee include overseeing the general strategy as well as the risk management in connection with the Company's activities, operational and financial objectives and financial reporting processes. The Executive Committee adopts resolutions based on consensus, or if no consensus can be reached, by a majority of the votes cast by the members of the Managing Board including the vote of the chairman of the Executive Committee.

The chairman of the Executive Committee is our President and Chief Executive Officer and he thus serves as the primary interface between the Executive Committee and the Supervisory Board. Members of the Executive Committee are appointed by the Managing Board subject to the approval of the Supervisory Board. Members of the Executive Committee can be suspended and dismissed by the Managing Board without prior approval by the Supervisory Board.

The Executive Committee was composed of the following nine members as of December 31, 2024, as set forth in the table below.

Name(1)	Position	Years with Company	Years in Semiconductor Industry	Age
Jean-Marc Chery	President and Chief Executive Officer	40	40	64
Marco Cassis	President, Analog, Power & Discrete, MEMS and Sensors Group	37	37	61
Rajita D'Souza	President, Human Resources, Corporate Social Responsibility	4	4	52
Remi El-Ouazzane	President, Microcontrollers and Digital ICs and RF products Group	3	27	51
Lorenzo Grandi	President and Chief Financial Officer	37	37	63
Fabio Gualandris	President, Quality, Manufacturing and Technology	36	37	65
Steven Rose	President, Legal Counsel and Public Affairs	33	33	62
Jerome Roux	President, Sales and Marketing	33	37	59

(1) Mr Monti left the Company in 2024.

Detailed biographies of our Executive Committee members are available on our website www.st.com.

Executive Vice Presidents

The group of Executive Vice Presidents consisted of the following people as of December 31, 2024:

Name⁽¹⁾	Position	Years with Company	Years in Semi-Conductor Industry	Age
Mario Aleo	Executive Vice President, Power Transistors Sub-Group, Analog, Power & Discrete, MEMS and Sensors Group			
Michael Anfang	Executive Vice President, Sales & Marketing, Europe, Middle East and Africa Region (EMEA)	26	34	56
Christophe Ayela	Executive Vice President, Analog & Power Front-End Manufacturing	34	34	58
Alexandre Balmeffrezol	Executive Vice President and General Manager of the Imaging sub-group within ST's Analog, Power & Discrete, MEMS and Sensors Group	27	27	50
Stefano Cantù	Executive Vice President, Strategic Corporate Programs Office	30	30	56
Henry Cao	Executive Vice President, Sales & Marketing, China Region	4	4	51
Alessandro Cremonesi	Executive Vice President, Chief Innovation Officer and General Manager System Research and Applications Group	40	40	66
Alberto Della Chiesa	Executive Vice President Supply Chain	36	36	60
Ricardo De Sa Earp	Executive Vice President, General-Purpose Microcontroller sub-group within ST's Microcontrollers, Digital ICs and RF products Group	27	27	61
Franck Freymond	Executive Vice President, Chief Audit & Risk Executive	14	14	56
Fabrice Gomez	Executive Vice President, Head of Back-End Manufacturing & Technology	12	12	56
Frédérique Le Grevés	Executive Vice President, Europe and France Public Affairs, President of STMicroelectronics France	4	4	57
Claudia Levo	Executive Vice President, Integrated Marketing & Communications	13	15	59
Matteo Lo Presti	Executive Vice President, General Manager, Analog sub-group within ST's Analog, Power & Discrete, MEMS and Sensors Group	31	34	60
Laurent Malier	Executive Vice President Digital Front-End Manufacturing and Technology	9	30	57
Hiroshi Noguchi	Executive Vice President, Sales & Marketing, Asia Pacific Region excluding China (APeC)	17	17	49
Giuseppe Notarnicola	Executive Vice President, Treasury, Insurance, M&A, IP BU, and Italy Public Affairs	19	19	63
Rino Peruzzi	Executive Vice President, Sales & Marketing, Americas and Global Key Account Cluster	26	26	59
Jerome Ramel	Executive Vice President, Corporate Development and Integrated External Communication			
Chouaib Rokbi	Executive Vice President, Digital Transformation and Information Technology, and Global Procurement	24	24	53
Bertrand Stoltz	Executive Vice President, Corporate Finance, Asia Public Affairs	30	30	54
Geoff West	Executive Vice President, Chief Procurement Officer	31	39	61
Nicolas Yackowlew	Executive Vice President, Product Quality & Reliability	29	30	55

(1) Our former Executive Vice President, Power Transistor subgroup, Mr. Edoardo Merli has left the Company in 2024.

Detailed biographies of our Executive Vice Presidents are available on our website www.st.com.

5.5. Dutch Gender Balance Act

On January 1, 2022, the Dutch Gender Balance Act (Wet evenwichtige man-vrouw verhouding, “GBA”) promoting gender balance within the management of large companies entered into force. Pursuant to the GBA, below we report on (i) the current composition of our Supervisory Board, Managing Board and our Senior Management (as defined in Section 5. (*Corporate Governance - Managing Board*)) in number of men and women, (ii) the gender balance target that we have set for our Supervisory Board and our Senior Management, (iii) our action plan to reach these gender balance targets; (iv) the results of our efforts in meeting the set gender balance targets. For the purpose of reporting under the GBA, we consider our Senior Management to be our sub-top as referenced in the GBA.

We operate in an industry in which women are traditionally under-represented, and it is a priority for us to attract, retain and grow our female talent pool. We aim to encourage girls to choose technical studies at an early stage in their education, helping us to address the shortage of women in technical positions. In 2024 we continued to promote diversity in STEM (Science, Technology, Engineering and Mathematics) functions. We organized local initiatives that raise awareness among people about the importance of STEM related subjects.

Composition of our Supervisory Board, Managing Board and Senior Management indicated in number of men and women

On December 31, 2024, our Managing Board consisted of two males, our President and Chief Executive Officer and our President and Chief Financial Officer.

On December 31, 2024, our Supervisory Board consisted of 9 members, of which 4 female (44%) and 5 male (56%). Please refer to Section 4.1. (*Report of the Supervisory Board - Composition of the Supervisory Board*) for further details on the composition of our Supervisory Board.

On December 31, 2024, our Senior Management consisted of 31 members, of which 3 female (10%) and 28 male (90%). More specifically, on December 31, 2024, our Executive Committee consisted of 8 members, of which 1 female (12%) and 8 male (88%), and our Executive Vice Presidents as a group consisted of 23 members, of which 2 female (9%) and 21 male (91%). Please refer to Section 5.4. (*Managing Board*) for further details on the composition of our Senior Management.

Gender balance target for our Supervisory Board, Managing Board and Senior Management

Gender balance target Managing Board. Our Managing Board has historically consisted of one person until May 22, 2024, as of which date our Managing Board consists of 2 male members. Since the change in the composition of our Managing Board is relatively new, we have not yet set a gender balance target for our Managing Board. Considering that at this point we deem continuity in the current composition of our Managing Board to best serve the interests of the Company, we will for now not be setting any particular diversity target specifically for the composition of our Management Board.

Gender balance target Supervisory Board. As stated in our diversity policy for our Supervisory Board, the gender balance target for our Supervisory Board is that at least 30% of its members is male and at least 30% is female. On December 31, 2024, our target was exceeded for both the male and female members of our Supervisory Board as mentioned above.

Gender balance target Senior Management. Our gender balance target for our Senior Management is that at least 25% is female and at least 25% is male by 2035, to ensure a more balanced ratio of male

and female members within our Senior Management. The same target applies respectively to our Executive Committee, and to our Executive Vice Presidents as a group.

Gender balance action plan

- *Managing Board.* We do not yet have a gender balance action plan in place for our Managing Board nor a gender balance target, since until May 22 2024 our Managing Board historically consisted of one member only.
- *Supervisory Board.* No specific gender balance action plan is in place for our Supervisory Board as in its current composition our gender balance targets for our Supervisory Board are met and even exceeded.
- *Senior Management.* We have implemented a gender balance action plan to achieve the above mentioned gender balance target for a more balanced ratio of male and female members in our Senior Management. This plan is applied respectively to our Executive Committee and to our Executive Vice Presidents as a group.

We are committed to strengthening the role of women in building the future of our Company and have therefore accelerated the relevant programs aimed at increasing the proportion of women in management roles. Programs such as the WIL and AWIL programs play a key role in preparing the pipeline of women in management roles within our Company to ultimately reach the above mentioned gender balance target in our Senior Management, in our Executive Committee and in our Executive Vice Presidents as a group.

The WIL program launched in 2015 for junior and middle management aims to prepare the next generation of female leaders. The AWIL program, launched in 2021 is aimed at senior female managers and directors to identify their leadership style and increase their visibility and recognition within our Company. Both programs consist of training, coaching and mentoring.

Results

Supervisory Board. With regard to our Supervisory Board, the gender balance target of at least 30% male and at least 30% female has been exceeded.

Senior Management. Our WIL and AWIL programs accelerate the development of women for leadership positions in our Company. We continue to make progress in women representation at all management levels.

Due to a shortage of women in our executive talent pool, the female representation within our Senior Management remained unchanged compared to December 31, 2023. More specifically per December 31, 2024: (i) the female representation in our Senior Management remained 10%; (ii) the female representation in our Executive Committee increased from 11% to 12% and (iii) the female representation in our Executive Vice Presidents as a group remained 9%.

We remain dedicated to increasing the representation of women in executive levels, both by increasing the internal pool and building an external one with sourcing partners.

5.6. Indemnification of members of our Managing Board and Supervisory Board

To the extent permitted by Dutch law, members of our Managing Board and Supervisory Board as well as our officers or agents shall be indemnified by us against expenses, such as the reasonable costs of defending claims, as stated in our Articles of Association. Under certain circumstances, there will be no entitlement to this reimbursement. We hold a Director and Officer liability insurance for the members of our Managing Board and Supervisory Board as well as our officers.

5.7. Risk Management and Control Systems

For our statement on the main features of our risk management and control systems and of the group of which the financial data are included in our annual accounts, please refer to Section 3.3. (*Report of the Managing Board - Risk Management and Internal Control*).

5.8. Required information Article 10 Takeover Directive

The EU Takeover Directive requires that listed companies publish additional information providing insight into defensive structures and mechanisms which they apply. The relevant provision has been implemented into Dutch law by means of the Decree on Article 10 of the Takeover Directive of April 5, 2006. Pursuant to this decree, Dutch companies whose securities have been admitted to trading on a regulated market have to include information in their annual report which could be of importance for persons who are considering taking an interest in the company.

This information comprises amongst other things:

- the capital structure of the company;
- restrictions on the transfer of securities and on voting rights;
- special powers conferred upon the holders of certain shares;
- the rules governing the appointment and dismissal of board members and the amendment of the Articles of Association;
- the rules on the issuing and the repurchasing of shares by the company;
- significant agreements to which the company is a party and which contain change of control rights (except where their nature is such that their disclosure would be seriously prejudicial to the company); and
- agreements between the Company and its board members or employees providing for a “golden parachute”.

Capital structure

The authorized share capital of STMicroelectronics N.V. is €1,810 million consisting of 1,200,000,000 common shares and 540,000,000 preference shares, each with a nominal value of €1.04. As of December 31, 2024, the number of common shares issued was 911,281,920 shares (December 31, 2023: 911,281,920 shares).

As of December 31, 2024, the number of common shares outstanding was 898,175,408 shares (December 31, 2023: 902,771,081 shares). There were no preference shares issued as of December 31, 2024, and December 31, 2023, respectively.

Restrictions on the transfer of shares

We do not have restrictions on the transfer of our common and preference shares, provided that Stichting Continuïteit ST, if it holds preference shares, requires our consent to sell or otherwise dispose of preference shares or voting rights attached thereto.

Holdings in us that are subject to a disclosure obligation

For information on holdings in us that are subject to a disclosure obligation pursuant to chapter 5.3 of the Dutch Financial Markets Supervision Act ("*Wet op het financieel toezicht*"), please refer to Section 5.11. (*Corporate Governance - Major Shareholders*).

Special controlling rights

We do not have special controlling rights attached to our common or preference shares.

Control of employees share/option schemes

We do not have any scheme granting rights to employees to subscribe for or acquire shares in our share capital or the share capital of one of our subsidiaries where the control is not directly exercised by the employees. However, key employees as determined by our unvested share award plans are granted share awards (as part of their compensation) with a staggered vested schedule pursuant to our determined criteria. For more information on employees share/option schemes, see the remuneration report in Section 4.9. (*Report of the Supervisory Board - Remuneration Report*).

Restrictions on voting rights

We do not have any restrictions on voting rights nor have we cooperated in the issuance of depository receipts for shares.

Agreements with shareholders that may give rise to restrictions on the transfer of shares or restrictions of voting rights

We do not have any agreements with shareholders that may give rise to restrictions on the transfer of shares or restrictions of voting rights. However, please see below in Section 5.12. (*Corporate Governance - Shareholders' Agreements*) for certain information on shareholders' agreements regarding us to which we are not a party.

Provisions on appointment and dismissal of members of our Managing Board and Supervisory Board and amendment of our Articles of Association

Please see the information included above in Section 5.3. (*Corporate Governance - Supervisory Board*) and Section 5.4. (*Corporate Governance - Managing Board*) with respect to the appointment and dismissal of the members of our Managing Board and Supervisory Board.

Our Articles of Association can be amended by our general meeting of shareholders, upon the proposal of our Supervisory Board, by a simple majority of the votes cast at a meeting where at least 15% of the issued and outstanding share capital is present or represented. If a quorum is not present, a further meeting can be convened which shall, irrespective of the share capital represented, to pass a resolution. If the relevant amendment affects the rights of holders of common shares or holders of preference shares, the approval of the meeting of holders of common shares and the meeting of holders of preference shares, respectively, is required.

Authority of the Managing Board and Supervisory Board regarding the issuance and repurchase of shares

Pursuant to our Articles of Association, our Managing Board does not have the authority to issue shares or grant rights to subscribe for shares. Our Supervisory Board has this authority. Our 2024 AGM

authorized our Supervisory Board, until the conclusion of the 2025 AGM, to resolve upon: (i) the issuance of common shares or the granting of rights to subscribe for common shares in our share capital, up to a maximum of 10% of our issued common share capital as per December 31, 2022, but not exceeding the limits of the authorized share capital, (ii) the terms and conditions of an issuance of common; and (iii) the limitation and/or exclusion of pre-emptive rights of existing shareholders upon issuance of common shares or rights to subscribe for it.

Pursuant to a shareholders' resolution adopted at our 2024 AGM, our Managing Board, subject to the approval of our Supervisory Board, was authorized, until the conclusion of the 2025 AGM, to acquire common shares and/or preference shares subject to the limits of Dutch law and our Articles of Association and in accordance with the acquisition price conditions set forth in such shareholders' resolution. Furthermore, our Articles of Association provide that we shall be able to acquire shares in our own share capital in order to transfer these shares under employee stock option or stock purchase plans, without an authorization of our general meeting of shareholders.

Significant agreements to which we are a party and which contain change of control rights

On August 4, 2020, we issued senior unsecured bonds, in two tranches, one of \$750 million with a maturity of 5 years and one of \$750 million with a maturity of 7 years, convertible into new or existing common shares in our share capital. Pursuant to the terms and conditions of the senior bonds (the "Conditions"), bondholders have certain conversion rights and redemption rights upon a change of control, all as provided in the Conditions.

Agreements with our President and Chief Executive Officer regarding distributions upon the termination of his employment contract in connection with a public offer on us

The CEO Agreements, provide for distributions upon termination of his employment agreements upon a change of control, amongst others, pursuant to a takeover bid, as further described in Section 4.9.2.7. (*Remuneration Report - Managing Board remuneration - Compensation provisions in the event of termination or departure of the members of our Managing Board - Table of the compensation in the event of termination or departure of the members of our Managing Board*).

Stichting Continuïteit ST — our preference shares

We have an option agreement with an independent foundation, Stichting Continuïteit ST (the "Stichting"), regarding our preference shares. This is a common practice used by a majority of publicly traded Dutch companies. Our Managing Board and our Supervisory Board, along with the board of the Stichting, have declared that they are jointly of the opinion that the Stichting is independent of us. The option agreement provides for the issuance of up to a maximum 540,000,000 preference shares. Any such shares would be issued to the Stichting upon its request and in its sole discretion and upon payment of at least 25% of the par value of the preference shares to be issued.

The Stichting would have the option, which it shall exercise in its sole discretion, to take up the preference shares. The shares would be issuable in the event of actions which the board of the Stichting determines would be contrary to our interests, our shareholders and our other stakeholders and which in the event of a creeping acquisition or offer for our common shares are not supported by our Managing Board and Supervisory Board. The preference shares may remain outstanding for no longer than two years.

No preference shares have been issued to date. The effect of the preference shares may be to deter potential acquirers from effecting an unsolicited acquisition resulting in a change of control as well as to create a level-playing field in the event actions which are considered to be hostile by our Managing Board and our Supervisory Board, as described above, occur and which the board of the Stichting determines to be contrary to our interests and our shareholders and other stakeholders.

The board of the Stichting is currently comprised of the following three members:

- Professor S.C.J.J. Kortmann, a well-known professor at law at the Radboud University in Nijmegen, The Netherlands, as Chairman of the Board;
- Mr. F. Ago, a well-known and experienced attorney at law in Italy; and
- Mr. E.G. Alphandéry, a professor of economics and former French Minister of Economy.

All members of the board of the Stichting are independent from the Company.

5.9. Shares without voting rights and shares which do not give any or only a limited right to share in the profits or reserves

We do not have any shares without voting rights or shares which do not give any or only a limited right to share in the profits or reserves of the Company.

5.10. Code of Conduct

Our Code of Conduct is designed to promote honest and ethical business conduct. Our Code of Conduct sets clear expectations on the way we conduct business and make our decisions, fostering a culture of integrity. Our Code of Conduct is applicable to all of our employees and senior managers. We have adapted and will amend our Code of Conduct and related policies, as appropriate, to raise awareness, ensure effectiveness and compliance, and to reflect regulatory or other changes. Our Code of Conduct also encourage our employees (or any interest third-party) to speak up and express any concern they may have in good faith, without fear of retaliation. Our Code of Conduct provides that if any employee or senior manager acts in contravention of the principles set forth therein, we will take appropriate steps in terms of the procedures in place for fair disciplinary action. This action may, in cases of severe breaches, include dismissal. Our Code of Conduct is available on our website in the Corporate Governance section, at st.com.

5.11. Deviations from the Dutch Corporate Governance Code

According to the Dutch Corporate Governance Code, we are required to publish a list of current deviations from the Dutch Corporate Governance Code, and an explanation why we do not comply, the so-called comply-or-explain-principle. Because we are listed on the New York Stock Exchange, we are required to comply with the U.S. Sarbanes-Oxley Act of 2002, as well as listing rules of the New York Stock Exchange, and the rules and regulations promulgated by the SEC. For the full text of (i) the U.S. Sarbanes-Oxley Act of 2002, please see www.govinfo.gov, (ii) the listing rules of the New York Stock Exchange, please see nyseguide.srorules.com/listed-company-manual and (iii) the rules and regulations promulgated by the SEC, please see www.sec.gov.

We comply with such principles and best practice provisions of the Dutch Corporate Governance Code or explain why we deviate from such principles or provisions. We comply with the Dutch Corporate Governance Code principles and best practice provisions, with the exception of the following best practice provisions:

- best practice provisions 1.1.5 and 2.1.5.: As referenced Section 3.4. (*Report of the Managing Board - Sustainability statement*) our corporate social responsibility policy addresses, amongst others, the topics of diversity, equity and inclusion and stakeholder engagement. This policy is available on our website: https://www.st.com/resource/en/policy_statement/st-corporate-social-responsibility-policy.pdf. We are currently in the process of drawing up a dedicated policy on this subject and will report on the progress in our next annual report;
- best practice provision 2.1.7: As explained in the report of our Supervisory Board, our criteria deviate from the independence criteria as included in best practice provision 2.1.7 of the Dutch Corporate Governance Code, specifically item iii. of such best practice provisions (and therewith also best practice provision 2.1.10 of the Dutch Corporate Governance Code), but are in conformity with governance listing standards of the New York Stock Exchange and our Corporate

Governance Charter as approved by our shareholders in the 2004 AGM. This departure is expected to continue for more than one financial year;

- best practice provision 2.2.2: The term of office of Supervisory Board members may from time to time exceed the maximum term mentioned in the Dutch Corporate Governance Code. However, if the maximum term is exceeded, this is always approved by our shareholders as members of our Supervisory Board are appointed by our general meeting of shareholders. As mentioned in our Supervisory Board charter, we consider that it may not always be in our best interests to limit the number of terms members may serve on our Supervisory Board. However, none of the current members of our Supervisory Board currently exceed the maximum term mentioned in the Dutch Corporate Governance Code;
- best practice provision 3.1.2. vi.: No specific holding term of five years apply to the unvested stock awards granted to the members of our Managing Board, under the long-term incentive plan. This element is part of the employment conditions on the basis of which the members of the Managing Board accepted their responsibilities. Those conditions are among others based on the international context in which we operate, industry standards and applicable laws, and in line with our remuneration policy adopted by our 2021 AGM and renewed by our 2024 AGM;
- best practice provision 3.2.3: As described in Section 3.9.2.G. (*Managing Board remuneration - Compensation provisions in the event of termination or departure of the members of our Managing Board*), the remuneration in the event of dismissal of our President and Chief Executive Officer, exceeds one year's salary. The remuneration in the event of dismissal shall be paid only if the employment agreement is terminated by us. This element is part of the employment conditions on the basis of which our President and Chief Executive Officer accepted his responsibilities. Those conditions are among others based on the international context in which we operate, industry standards and applicable laws, and in line with our, at that time, remuneration policy as approved by our 2005 AGM, and approved by our 2024 AGM. This departure is expected to continue for more than one financial year;
- best practice provision 3.4.1: We believe we comply with most elements of this best practice provision but do not disclose certain select compensation information, among others, to the extent that we believe it is competitively sensitive information that if disclosed could harm our ability to attract and retain executives and other key personnel; and
- best practice provision 3.4.1. iv.: The pay ratio disclosed in Section 4.9.4. (*Remuneration Report - Remuneration comparison between the Managing Board, the Executive Committee (excluding the members of our Managing Board), the Executive Vice Presidents and employees*) uses the calculation methodology in line with our previous years' disclosure. As per financial year 2023, the Dutch Corporate Governance Code prescribes an alternate calculation methodology compared to that used for our previous years and the CSRD, which is the basis for our sustainability reporting over financial year 2024, prescribes yet another alternate calculation methodology which will also differ from the calculation methodology in the Dutch Corporate Governance Code. In order to safeguard clarity and consistency of disclosures of the pay ratio within the Company, for financial year 2024, we report on the pay ratio in line with previous years' disclosure in Section 4.9.4. (*Remuneration Report - Remuneration comparison between the Managing Board, the Executive Committee (excluding the members of our Managing Board), the Executive Vice Presidents and employees*) and, in addition, we also report such ratio in compliance with the CSRD in Section 3.4.4.1 (*Social - Own workforce*).

5.12. Major Shareholders

Holders of our shares (including certain comparable instruments, such as instruments with a value (partly) dependent on shares or distributions on shares, or contracts creating an economic position similar to shares) or voting rights (including potential interests, such as via options or convertible bonds) may have disclosure obligations under Dutch law. Any person or entity whose direct or indirect interest in our share

capital or voting rights (including potential interest) reaches, exceeds or falls below a certain threshold must make a disclosure to the AFM immediately. The threshold percentages are 3%, 5%, 10%, 15%, 20%, 25%, 30%, 40%, 50%, 60%, 75% and 95%. If a person's direct or indirect interest in the share capital or voting rights passively reaches, exceeds or falls below the abovementioned thresholds (e.g. as a result of a change in the capital of the company), the person in question must give notice to the AFM no later than the fourth trading day after the AFM has published the change in the share capital and/or voting rights in the public register. In addition, a notification requirement applies in respect of shares with special statutory rights (e.g. priority shares), regardless of the abovementioned percentages.

Furthermore, each person who is or ought to be aware that the substantial holding he holds in the Company, reaches, exceeds or falls below any of the abovementioned thresholds vis-à-vis his most recent notification to the AFM, which change relates to the composition of the notification as a result of certain acts (e.g. (i) the exchange of certain financial instruments for shares or depositary receipts for shares, (ii) the exchange of shares for depositary receipts for shares, or (iii) as a result of the exercise of rights pursuant to a contract for the acquisition of voting rights) must give notice to the AFM no later than the fourth trading day after he became or ought to be aware of this change.

For the purpose of calculating the percentage of capital interest or voting rights, among others, the following interests must be taken into account: (i) those directly held by him; (ii) those held by his controlled undertakings for purposes of the Dutch Financial Supervision Act; (iii) shares held by a third-party for such person's account and the votes such third-party may exercise; (iv) the votes held by a third-party if such person has concluded an oral or written voting agreement with such party which provides for a lasting common policy on voting; (v) the votes held by a third-party if such person has concluded an oral or written agreement with such party which provides for a temporary and paid transfer of the votes; and (vi) the votes which a person may exercise as a proxy but in his own discretion. A person who has a 3% or larger interest in the share capital or voting rights and who ceases to be a controlled undertaking must without delay notify the AFM. As of that moment, all notification obligations under the Dutch Financial Supervision Act will become applicable to the former controlled undertaking itself. The management company of a common fund (*beleggingsfonds*) shall be deemed to have the disposal of the shares held by the depositary and the related voting rights. The depositary of a common fund shall be deemed not to have the disposal of shares or voting rights. Furthermore, special rules apply to the attribution of the ordinary shares which are part of the property of a partnership or other community of property. A holder of a pledge or right of usufruct in respect of our shares can also be subject to a notification obligation if such person has, or can acquire, the right to vote on our shares. If a pledgor or usufructuary acquires such voting rights, this may also trigger a notification obligation for the holder of our shares. A person is also deemed to hold shares if he has a financial instrument (i) whose rise in value depends in part on the rise in value of the underlying shares or on dividend or other payments on those shares (in other words, a long position must be held in those shares), and (ii) which does not entitle him to acquire shares in a listed company (i.e., it is a cash-settled financial instrument). In addition, a person who may, by virtue of an option, be obliged to buy shares in a listed company is also equated with a shareholder. Moreover, a person who has entered into a contract (other than a cash-settled financial instrument) that gives him an economic position comparable to that of a shareholder in a listed company is also deemed to hold shares for the purposes of the disclosure obligation.

The holder of a financial instrument representing a short position in our shares is required to notify the AFM if such short position, expressed in a capital percentage, reaches or crosses a threshold percentage. The threshold percentages are the same as referred to above in this section. Short position refers to the gross short position (i.e., a long position held by the holder cannot be offset against the short position). There is also a requirement to notify the AFM of the net short position (i.e., long positions are offset against short positions) if such short position, expressed in a capital percentage, reaches or crosses a threshold percentage. The threshold percentages are 0.2% and each 0.1% above that. Notifications as of 0.5% and each 0.1% above that will be published by the AFM. The notification shall be made no later than 3:30 pm CET on the following trading day.

Under Dutch law, the members of our Managing Board and each of the members of our Supervisory Board must without delay notify the AFM of any changes in his interest or potential interest in our share

capital or voting rights. Under the European Market Abuse Regulation, the members of our Managing Board, the members of the Executive Committee and each of the members of our Supervisory Board, as well as any other person who would have the power to take managerial decisions affecting the future developments and business prospects of the Company having regular access to inside information relating, directly or indirectly, to the Company, must notify the AFM of any transactions conducted for his or her own account relating to the shares or in financial instruments the value of which is also based on the value of the shares. In addition, certain persons who are closely associated with members of the Managing Board, the Executive Committee and Supervisory Board or any of the other persons as described above, are required to notify the AFM of any transactions conducted for their own account relating to the shares or in financial instruments the value of which is also based on the value of the shares.

The AFM publishes all notifications on its public website (www.afm.nl). Non-compliance with the notification obligations under European or Dutch law can lead to imprisonment or criminal fines, or administrative fines or other administrative sanctions. In addition, non-compliance with these notification obligations may lead to civil sanctions, including, without limitation, suspension of the voting rights attaching to our shares held by the offender for a maximum of three years, (suspension and) nullification of a resolution adopted by our shareholders' meeting (if it is likely that such resolution would not have been adopted if the offender had not voted) and a prohibition for the offender to acquire our shares or votes for a period of no more than five years. Shareholders are advised to consult with their own legal advisers to determine whether notification obligations apply to them.

The following table sets forth certain information with respect to the ownership of our issued common shares as of December 31, 2024, based on information available to us:

Shareholders	Common Shares Owned	
	Number	%
STMicroelectronics Holding N.V. ("ST Holding")	250,704,754	27.5
Public ⁽¹⁾	647,470,654	71.1
Treasury shares	13,106,512	1.4
Total	911,281,920	100.0

(1) According to the report available on Schedule 13G filed with the SEC on October 25, 2024, we understand that as of December 31, 2024 BlackRock, Inc. is the beneficial owner of 57,534,085 of our common shares (representing approximately 6.3 % of our issued common shares).

We are not aware of any significant change over the past three years in the percentage ownership of our shares by ST Holding, our major shareholder. ST Holding does not have any different voting rights from those of our other shareholders.

According to the report on Schedule 13G ("2024 ST Holding 13G") jointly filed with the SEC on February 14, 2024, by ST Holding, Bpifrance Participations S.A., a successor to its former wholly-owned subsidiary FT1CI, ("Bpifrance"), the Italian Ministry of the Economy and Finance (the "MEF" and together with Bpifrance hereinafter the "STH Shareholders"), Caisse des d'epots et consignations ("CDC"), EPIC BpiFrance ("EPIC") and Bpifrance S.A., the Italian government and the French government, each indirectly through the MEF and Bpifrance, respectively, held 13.9% of our share capital as of December 31, 2024. The ownership percentages of each the MEF and Bpifrance are based on 902,771,081 shares outstanding as of December 31, 2023. Bpifrance is 99.9% owned by Bpifrance S.A., in which CDC and EPIC each hold a 49.2% participation. Below is a brief summary of certain details from the 2024 ST Holding 13G.

All transactions with major shareholders were in compliance with best practice provision 2.7.5 of the Dutch Corporate Governance Code.

5.13. Shareholders' Agreements

5.13.1. STH Shareholders' Agreement

The filers of the 2024 ST Holding 13G have entered into the STH Shareholders' Agreement which governs relations between them, including for certain matters relating to the ownership of our shares and the actions of our management to the extent shareholder approval is required. Below is a brief summary of certain details from the 2024 ST Holding 13G.

5.13.1.1. Standstill

The STH Shareholders' Agreement contains a standstill provision that precludes any of the parties and the parties' affiliates from acquiring, directly or indirectly, any of our common shares or any instrument providing for the right to acquire any of our common shares other than through ST Holding. The standstill is in effect for as long as such party holds our common shares through ST Holding. The parties agreed to continue to hold their stakes in us at all times through the current holding structure of ST Holding, subject to certain limited exceptions.

5.13.1.2. Corporate Governance

The STH Shareholders' Agreement provides for a balanced corporate governance between the STH Shareholders for the duration of the "Balance Period", despite actual differences in indirect economic interest in us. The "Balance Period" lasts as long as each STH Shareholder owns at any time a voting stake in ST Holding equal to at least 47.5% of the total voting stakes of ST Holding.

Managing Board and Supervisory Board members can only be appointed by the general meeting of shareholders upon a proposal by the Supervisory Board. The Supervisory Board passes resolutions, including on such a proposal, by at least three quarters of the votes of the members in office. The STH Shareholders Agreement, to which we are not a party, furthermore provides that: (i) each of the STH Shareholders, Bpifrance, on the one hand, and the MEF, on the other hand, may propose the same number of members for election to the Supervisory Board by our shareholders, and ST Holding shall vote in favor of such members; and (ii) any decision relating to the voting rights of ST Holding shall require the unanimous approval of the STH Shareholders. ST Holding may therefore be in a position to effectively control actions that require shareholder approval, including, as discussed above, the proposal of six out of nine members for election to our Supervisory Board (three members by each STH Shareholder) and the appointment of our Managing Board, as well as corporate actions, and the issuance of new shares or other securities. As a result of the STH Shareholders Agreement, the Chairman of our Supervisory Board is proposed by an STH Shareholder for a three-year term, and the Vice-Chairman of our Supervisory Board is proposed by the other STH Shareholder for the same period, and vice-versa for the following three-year term. The STH Shareholder proposing the appointment of the Chairman may furthermore propose the appointment of the Assistant Secretary of our Supervisory Board, and the STH Shareholder proposing the appointment of Vice-Chairman proposes the appointment of the Secretary of our Supervisory Board. Finally, each STH Shareholder also proposes the appointment of a financial controller to the Supervisory Board.

The STH Shareholders furthermore agreed that during the Balance Period, any other decision, to the extent that a resolution of ST Holding is required, must be pursuant to the unanimous approval of the shareholders of ST Holding.

At the end of the Balance Period i.e., once a shareholder's voting stake in ST Holding has decreased under the 47.5% threshold, such STH Shareholder being thereafter referred to as "minority shareholder" and the other one being referred to as "majority shareholder", the members of our Supervisory Board and those of ST Holding designated by the minority shareholder of ST Holding will, pursuant to the Shareholders' Agreement, immediately resign upon request of ST Holding's majority shareholder.

After the end of the Balance Period, unanimous approval by the shareholders of ST Holding remains required to approve:

- as long as any of the STH Shareholders indirectly owns at least the lesser of 3% of our issued and outstanding share capital or 10% of the STH Shareholders' aggregate stake in us at such time, with respect to ST Holding, any changes to the Articles of Association, any issue, acquisition or disposal of shares in ST Holding or change in the rights of its shares, its liquidation or dissolution and any legal merger, de-merger, acquisition or joint venture agreement to which ST Holding is proposed to be a party;
- as long as any of the STH Shareholders indirectly owns at least 33% of the STH Shareholders' aggregate stake in us, certain changes to our Articles of Association (including any alteration in our authorized share capital, or any issue of share capital and/or financial instrument giving the right to subscribe for our common shares, changes to the rights attached to our shares, changes to the preemptive rights, issues relating to the form, rights and transfer mechanics of the shares, the composition and operation of the Managing and Supervisory Boards, matters subject to the Supervisory Board's approval, the Supervisory Board's voting procedures, extraordinary General Meetings of Shareholders and quorums for voting at General Meetings of Shareholders);
- any decision to vote our shares held by ST Holding at our general meeting of shareholders with respect to any substantial and material merger decision. In the event of a failure by the STH Shareholders to reach a common decision on the relevant merger proposal, our shares attributable to the minority shareholder and held by ST Holding will be counted as present for purposes of a quorum of shareholders at one of our General Meeting of Shareholders, but will not be voted (i.e., will be abstained from the vote in a way that they will not be counted as a negative vote or as a positive vote);
- in addition, the minority shareholder will have the right to designate at least one member of the list of candidates for the Supervisory Board to be proposed by ST Holding if that shareholder indirectly owns at least 3% of our total issued and outstanding share capital, with the majority STH Shareholder retaining the right to appoint that number of members to the Supervisory Board that is at least proportional to such majority shareholder's voting stake.

Finally, at the end of the Balance Period, the unanimous approval required for other decisions taken at the STMicroelectronics N.V. level shall only be compulsory to the extent possible, taking into account the actual power attached to the direct and indirect shareholding together held by the STH Shareholders in our Company.

5.13.1.3. Ownership of ST Shares

The STH Shareholders Agreement provides that each STH Shareholder retains the right to direct ST Holding to dispose of its stake in us at its sole discretion pursuant to the issuance of financial instruments, an equity swap, a structured finance deal or a straight sale; however, except in the case of a public offer, no sales by any party to the STH Shareholders Agreement may be made of any of our shares or any shares of Bpifrance or ST Holding to any of our top ten competitors or any company controlling such a competitor. The STH Shareholders Agreement also requires all of the parties to the STH Shareholders Agreement to hold their stakes in us at all time through the current holding structure of ST Holding, subject to certain limited exceptions, and precludes all such parties and their affiliates from acquiring any of our common shares other than through ST Holding.

5.13.1.4. Change of Control Provision

The STH Shareholders Agreement provides for tag-along rights, pre-emptive rights, and provisions with respect to a change of control of any of the STH Shareholders, on the one hand, and the Italian Ministry

of the Economy and Finance, on the other hand. The STH Shareholders may transfer shares of ST Holding, to any of their respective affiliates, which could include entities ultimately controlled by the Italian government or the French government.

5.13.1.5. Deadlock

In the event of a disagreement that cannot be resolved between the parties as to the conduct of the business and actions contemplated by the STH Shareholders' Agreement, each party has the right to offer its interest in ST Holding to the other, which then has the right to acquire, or to have a third-party acquire, such interest. If neither party agrees to acquire or have acquired the other party's interest, then together the parties are obligated to try to find a third-party to acquire their collective interests, or such part thereof as is suitable to resolve the deadlock.

5.13.1.6. Duration

The STH Shareholders' Agreement will remain in force as long as the MEF, on the one hand and Bpifrance, on the other hand, are shareholders of ST Holding.

6. Dividend Policy

Our dividend policy reads as follows: "STMicroelectronics seeks to use its available cash in order to develop and enhance its position in a competitive semiconductor market while at the same time managing its cash resources to reward its shareholders for their investment and trust in STMicroelectronics. Based on its results, projected capital requirements as well as business conditions and prospects, the Managing Board proposes on an annual basis to the Supervisory Board, whenever deemed possible and desirable in line with STMicroelectronics' objectives and financial situation, the distribution of a quarterly cash dividend, if any. The Supervisory Board, upon the proposal of the Managing Board, decides or proposes on an annual basis, in accordance with this policy, which portion of the profits or distributable reserves shall not be retained in reserves to fund future growth or for other purposes and makes a proposal concerning the amount, if any, of the quarterly cash dividend."

On May 22, 2024, our shareholders approved a cash dividend of US\$0.36 per outstanding share of our common stock, which was distributed in quarterly installments of US\$0.09 in each of the second, third and fourth quarters of 2024 and will also be distributed in the first quarter of 2025. Future dividends, if any, and their timing and amounts may be affected by our accumulated profits, our capacity to generate cash flow, our financial situation, the general economic situation and prospects and any other factors that the Supervisory Board, upon the recommendation of our Managing Board, shall deem important. For a history of dividends paid by us to our shareholders, see Note 7.6.20.6 of our consolidated financial statements.

7. Consolidated financial statements

7.1. Consolidated income statement

In millions of U.S. dollars, except per share amount	Notes	Year ended

7.6. Notes to the consolidated financial statements

7.6.1. Corporate information

STMicroelectronics N.V. (“the Company”), with Commercial Register No. 33194537 and RSIN 008751171, is organized under the laws of the Netherlands with its corporate legal seat in Amsterdam, the Netherlands, and head offices at WTC Schiphol Airport, Schiphol Boulevard 265, 1118 BH Schiphol, the Netherlands. Headquarters and operational offices are managed through STMicroelectronics International N.V., a wholly owned subsidiary of STMicroelectronics N.V., and are located at 39, Chemin du Champ des Filles, 1228 Plan-les-Ouates, Geneva, Switzerland.

The Group is a global semiconductor group of companies that designs, develops, manufactures and markets a broad range of products, including discrete and general purpose components, ASICs, full-custom devices and semi-custom devices and ASSPs for analog, digital and mixed-signal applications. In addition, the Group participates in the manufacturing value chain of smartcard products, which includes the production and sale of both silicon chips and smartcards.

The Group’s products are used in a wide variety of applications for the four end-markets the Group addresses: automotive, industrial, personal electronics and communications equipment, computers and peripherals. For the automotive and industrial markets, the Group addresses a wide customer base, particularly in industrial, with a broad and deep product portfolio. In personal electronics and communications equipment, computers and peripherals, the Group has a selective approach both in terms of the customers the Group serves, as well as in the technologies and products it offers.

The Company is a publicly traded company, listed on the New York Stock Exchange, on Euronext Paris and on the Borsa Italiana.

These consolidated financial statements have been approved by the Supervisory Board on March 26, 2025 for submission to the AGM.

7.6.2. Basis of preparation

The consolidated financial statements have been prepared on a historical cost basis, except for derivative financial instruments, debt and equity financial assets that have been measured at fair value. The consolidated financial statements are presented in dollars of the United States of America and all values are rounded to the nearest million (\$ million) except when otherwise stated. Under Article 35 of the Company’s Articles of Association, the financial year extends from January 1 to December 31, which is the period-end of each fiscal year.

7.6.3. Statement of compliance

These consolidated financial statements are prepared for Dutch statutory purposes in accordance with IFRS as adopted by the EU. These consolidated financial statements also comply with article 362.9 of Book 2 of the Dutch Civil Code. For internal and external financial reporting purposes, the Group uses generally accepted accounting principles in the United States (“U.S. GAAP”) as its primary set of reporting standards.

7.6.4. Basis of consolidation

The consolidated financial statements comprise the financial statements of the Group for the year ended December 31, 2024.

Subsidiaries are fully consolidated from the date of acquisition, being the date on which the Group obtains control and continues to be consolidated until the date that such control ceases. Subsidiaries are all entities over which the Group has control. The Group controls an entity when the Group is exposed to, or has rights to, variable returns from its involvement with the entity and has the ability to affect those returns through its power to direct the activities of the entity. If the Group loses control over a subsidiary, it:

- derecognizes the assets (including goodwill) and liabilities of the subsidiary;
- derecognizes the amount of any noncontrolling interest;

- derecognizes the cumulative translation differences recorded in equity;
- decognizes the fair value of the consideration received;
- decognizes the fair value of any investment retained;
- recognizes any surplus or deficit in profit or loss; and
- reclassifies the parent's share of components previously recognized in other comprehensive income to profit or loss.

The financial statements of the subsidiaries are prepared for the same reporting period as the parent company, using consistent accounting policies. All intra-group assets and liabilities, equity, income, expenses and cash flows resulting from intra-group transactions are eliminated in full on consolidation.

Noncontrolling interest is the share of equity in a subsidiary not attributable, directly or indirectly, to the parent company. Noncontrolling interest is presented separately in the consolidated income statement, consolidated statement of comprehensive income, consolidated statement of financial position and consolidated statement of changes in equity respectively.

Changes in a parent's ownership interest in a subsidiary that do not result in a loss of control are accounted for as equity transactions.

In assessing control, the Group takes into consideration the design and purpose of the activities of the investee, the power it exercises over the investee, through voting or other contractual rights, together with its exposure and rights to variable returns and how its power over the investee affect the amounts.

7.6.5. Changes in accounting policies

The accounting policies adopted are consistent with those followed in the preparation of the Group's annual financial statements for the year ended December 31, 2024. The following new or amended standards were effective and adopted on January 1, 2024 with no material effect on the Group's consolidated financial statements.

Amendments to IAS 1, Presentation of Financial Statements: the amendments specify the requirements for classifying liabilities as current or non-current by clarifying the requirements of IAS 1 when an entity expects to refinance or roll over an obligation under an existing loan facility. The amendments also have implications on the requirements related to covenant breaches. The amendments clarify: what is meant by a right to defer settlement; that a right to defer must exist at the end of the reporting period and that the classification is not affected by the likelihood that an entity will exercise its deferral right and that only if an embedded derivative in a convertible liability is itself an equity instrument would the terms of a liability not impact its classification. IAS 1, as amended, was endorsed by the EU in December 2023. The Group applied these amendments starting January 1, 2024. The presentation on the consolidated statement of financial position of the convertible bonds issued by the Company is in the scope of the amended guidance, which had no impact on the classification of the convertible debt upon adoption of the amended guidance.

The following amendments to existing standards became effective in 2024 with no impact on the accounting policies, financial position or performance of the Group:

- amendments to IAS 7: Statement of Cash Flows and IFRS 7 Financial Instruments: Disclosures: Supplier Finance Arrangements; and
- amendments to IFRS 16: Leases: Lease Liability in a Sale and Leaseback.

7.6.6. Standards and amendments issued but not yet effective

Standards and amended standards issued but not yet effective up to the date of issuance of these unaudited Semi Annual Financial Statements are listed below. The detailed descriptions of new or amended standards and interpretations issued are those that the Group reasonably expects to have an

impact on disclosures, financial position or performance when applied at a future date. The Group intends to adopt the new or amended guidance when effective.

IFRS 18, Presentation and Disclosure in Financial Statements: the IASB issued in April 2024 a new standard to enhance comparability and transparency when entities report economic performance. IFRS 18 focuses on the statement of profit or loss and introduces key new concepts which relate to: the structure of the statement of profit or loss; new disclosures for certain performance measures (management-defined performance measures); enhanced principles on aggregation and disaggregation which apply to the primary financial statements and related notes. IFRS 18 is intended to replace IAS 1, while many of IAS 1 principles are retained, with limited changes. IFRS 18 has not been endorsed by the EU yet. The new standard is effective for annual and interim periods starting January 1, 2027, including comparative information. The Group will apply the amended guidance when effective and is currently assessing the impact IFRS 18 will have on its consolidated financial statements, and more specifically on its consolidated income statement.

Amendments to the Classification and Measurement of Financial Instruments (IFRS 9 and IFRS 7): the amendments clarify that a financial liability is derecognized on the settlement date, which is when the related obligation is discharged or cancelled or expires or the liability otherwise qualifies for derecognition. The amendments also clarify how to assess the contractual cash flow characteristics of financial assets that include environmental, social and governance (ESG)-linked features and other similar contingent features. Additional disclosures are required under IFRS 7 for financial assets and liabilities with contractual terms that reference a contingent event (including those that are ESG-linked), and equity instruments classified at fair value through other comprehensive income. The amendments also clarify the treatment of non-recourse assets and contractually linked instruments. IFRS 9 and IFRS 7, as amended, have not been endorsed by the EU yet. The amendments are effective for annual periods starting January 1, 2026. Early adoption is permitted, with an option to early adopt the amendments for contingent features only. The Group will apply the amended guidance when effective and is currently assessing the impact these amendments will have on its consolidated financial statements.

Amendments to IFRS 9 and IFRS 7 related to Contracts Referencing Nature-dependent Electricity: the amendments are aimed to help entities to better report the financial effects of nature-dependent electricity contracts, which are often structured as power purchase agreements ("PPA"), in the light of the increased use of these contracts. The IASB has made targeted amendments to IFRS 9 and IFRS 7, which includes:

- clarifying the application of the "own" use" requirements;
- permitting hedge accounting if these contracts are used as hedging instruments; and
- adding new disclosures requirements to enable investors to understand the effect of these contracts on the entity's financial performance and cash flows.

IFRS 9 and IFRS 7, as amended, have not been endorsed by the EU yet. The amendments are effective for annual periods starting January 1, 2026. Early adoption is permitted. The Group will apply the amended guidance when effective and is currently assessing the impact these amendments will have on its consolidated financial statements.

The following new standards and amended standards are not expected to have a material impact on the accounting policies, financial position or performance of the Group:

- IFRS 19: Subsidiaries without Public Accountability: Disclosures;
- amendments to IAS 21: The Effects of Changes in Foreign Exchange Rates: Lack of exchangeability; and
- annual improvements Volume 11 (issued on July 18, 2024).

7.6.7. Summary of material accounting policies

7.6.7.1. Business combinations and goodwill

The Group applies the acquisition method to account for business combinations. The consideration transferred in a business combination (including any deferred and contingent consideration) is measured at fair value. Acquisition-related costs are expensed as incurred.

Each identifiable asset and liability are, with limited exceptions as set forth in the purchase accounting method, measured initially at the acquisition-date fair value. Only components of noncontrolling interest that constitute a present ownership interest and entitle their holder to a proportionate share of the entity's net assets in the event of liquidation are measured at either fair value or at the present ownership interests' proportionate share of the acquiree's net identifiable assets. All other components of noncontrolling interest are measured at their acquisition date fair value.

Goodwill arises when there is a positive difference between:

- the aggregate of consideration transferred, any noncontrolling interest in the acquiree and, in a business combination achieved in stages, the acquisition-date fair value of the acquirer's previously held equity interest in the acquiree; and
- the fair value of the net identifiable assets acquired.

Goodwill is initially recorded at cost. If the acquirer has made a gain from a bargain purchase, that gain is recognized in the consolidated income statement.

After initial recognition, goodwill is not subject to amortization but is tested at least annually for impairment. For the purpose of impairment testing, goodwill acquired in a business combination is, from the acquisition date, allocated to each of the Group's cash generating units ("CGU") that are expected to benefit from the synergies of the combination, irrespective of whether other assets or liabilities of the acquiree are assigned to those units.

A cash-generating unit is the smallest identifiable group of assets that generates cash inflows that are largely independent of the cash inflows from other assets or groups of assets.

Goodwill impairment tests are undertaken annually or more frequently if events or changes in circumstances indicate a potential impairment. The impairment test determines whether the recoverable amount of each cash-generating unit, which is the higher of its assets' fair value less costs of disposal and its value in use, is lower than its total carrying amount. If lower, an impairment loss is recognized for the excess of the carrying amount over the recoverable amount. If the impairment loss exceeds the book value of goodwill, allocation is made on a pro rata basis over the remaining assets of the CGU. In determining the value in use of a cash-generating unit, the Group usually estimates the expected discounted future cash flows associated with the unit. Significant management judgments and estimates are used in forecasting the future discounted cash flows, including: the applicable industry's sales volume forecast and selling price evolution, the cash-generating unit's market penetration and its revenue evolution, the market acceptance of certain recent technologies and products, or the relevant cost structure. The pre-tax discount rates applied are based on various scenarios incorporating a weighted average cost of capital and the perpetuity rates used in calculating cash flow terminal values.

7.6.7.2. Foreign currency translation

The U.S. dollar is the functional currency for the Company and the presentation currency for the Group, which is the currency of the primary economic environment in which the Group operates. The worldwide semiconductor industry uses the U.S. dollar as a currency of reference for actual pricing in the market. Furthermore, the majority of the Group's transactions are denominated in U.S. dollars, and revenues from external sales in U.S. dollars largely exceed revenues in any other currency. However, certain significant costs are largely incurred in the countries of the Eurozone and other non-U.S. dollar currency areas.

The functional currency of each subsidiary throughout the Group is either the local currency or the U.S. dollar, determined on the basis of the economic environment in which each subsidiary operates. For consolidation purposes, assets and liabilities included in the statement of financial position of the Group's subsidiaries having the local currency as functional currency are translated into the presentation currency of the Group at current rates of exchange at the reporting date. Income and expense items and cash flow items are translated at the monthly exchange rate in which they are recognized. The currency translation adjustments ("CTA") generated by the conversion of the financial position and results of operations from local functional currencies are reported as a component of other comprehensive income in the consolidated statement of comprehensive income and the consolidated statement of changes in equity.

Goodwill and fair value adjustments arising on the acquisition of a foreign entity are treated as assets and liabilities of the foreign entity and translated into the presentation currency of the Group at closing rate. Exchange differences arising are recognized in other comprehensive income.

Assets, liabilities, revenues, expenses, gains or losses arising from transactions denominated in foreign currency are recorded in the functional currency of the recording entity at the prevailing exchange rate. At each reporting date, monetary assets and liabilities denominated in a currency other than the recording entity's functional currency are re-measured into the functional currency at the exchange rate prevailing at the reporting date. The related exchange gains and losses are recorded in the consolidated income statement as "Other income" or "Other expenses".

7.6.7.3. Revenue recognition

Arrangements with customers are considered contracts if all the following criteria are met: (a) parties have approved the contract and are committed to perform their respective obligations; (b) each party's rights regarding the goods or services to be transferred can be identified; (c) payment terms for the goods or services to be transferred can be identified; (d) the contract has commercial substance and (e) collectability of the consideration is probable. The Group recognizes revenue from products sold to a customer, including distributors, when it satisfies a performance obligation by transferring control over a product to the customer. The Group may also enter into several multi-annual capacity reservation and volume commitment arrangements with certain customers. These agreements constitute a binding commitment for the customers to purchase and for the Group to supply allocated commitment volumes in exchange for additional consideration. The consideration related to commitment fees is reported as revenues from sale of products as it is usually based on delivered quantities.

In certain circumstances, the Group may enter into arrangements that concern principally revenues from services where the performance obligation is satisfied over time. The objective when allocating the transaction price is to allocate the transaction price to each performance obligation (or distinct good or service) in an amount that depicts the amount of consideration to which the Group expects to be entitled in exchange for transferring the promised goods or services to the customer. The payment terms typically range between 30 to 90 days. Certain customers require the Group to hold inventory as consignment in their hubs and only purchase inventory when they require it. Revenue for sales of such inventory is recognized when, at the customer's option, the products are withdrawn from the consignment and the Group satisfies a performance obligation by transferring control over a product to the customer.

Consistent with standard business practice in the semiconductor industry, price protection is granted to distribution customers on their existing inventory of the Group's products to compensate them for changes in market prices. The Group accrues a provision for price protection based on a rolling historical price trend computed monthly as a percentage of gross distributor sales. This historical price trend represents differences in recent months between the invoiced price and the final price to the distributor, adjusted to accommodate a significant change in the selling price. The short outstanding inventory time, visibility into the inventory product pricing and long distributor pricing history have enabled the Group to reliably estimate price protection provisions at period-end. The Group records the accrued amounts as a deduction of "Sales" in the consolidated income statement at the time of the sale.

The Group's customers occasionally return the Group's products for technical reasons. The Group's standard terms and conditions of sale provide that if the Group determines that products do not conform, the Group will repair or replace the non-conforming products, or issue a credit note or rebate of the purchase price. Quality returns are identified shortly after sale in customer quality control testing. The Group records the accrued amounts as a deduction of "Sales" in the consolidated income statement, using contractual and historical information.

The Group records a provision for warranty costs as a charge in "Cost of sales" in the consolidated income statement, based on historical trends of warranty costs incurred as a percentage of sales, which management has determined to be a reasonable estimate of the probable losses to be incurred for warranty claims in a period. Any potential warranty claims are subject to the Group's determination that the Group is at fault for damages, and such claims usually must be submitted within a short period of time following the date of sale. This warranty is given in lieu of all other warranties, conditions or terms expressed or implied by statute or common law. The Group's contractual terms and conditions typically limit its liability to the sales value of the products which gave rise to the claims.

The Group's insurance policy relating to product liability covers third-party physical damages and bodily injury, indirect financial damages as well as immaterial non-consequential damages caused by defective products.

In addition to product sales, the Group enters into arrangements with customers consisting in transferring licenses or related to license services. When the license is a right to use the Group's intellectual property as it exists at the time the license is granted, the corresponding revenue is recognized at a point in time. The revenue generated from these arrangements are reported on the line "Other revenues" of the consolidated income statement.

7.6.7.4. Other significant categories of income

Funding

The Group receives funding mainly from governmental entities and income is recognized when all contractual conditions for receipt of these funds are fulfilled and eligible expenditures incurred. Such funding is generally provided to encourage research, development and other innovation activities, industrialization deployment and local economic development. The conditions to receive government funding may include eligibility restrictions, approval by the local governmental authorities, annual budget appropriations, compliance with regulations, as well as specifications regarding objectives and results. Certain specific contracts include obligations to maintain a minimum level of employment and investment during a certain period of time. There could be penalties if these objectives are not fulfilled. Other contracts contain penalties for breach of contract, which may result in repayment obligations. Funding related to these contracts is recorded when the conditions required by the contracts are met.

The Group's funding programs are classified under two general categories: funding for research, development and other innovative activities, and capital investments. The Group also benefits from tax credits for R&D activities in several countries (primarily in France) as they are generally available to all companies.

Funding for research, development and other innovative activities

Funding for research, development and innovative activities is the most common form of funding that the Group receives. Public funding for such activities is recorded as "Other income" in the Group's consolidated income statement. The funding is recognized ratably as the related costs are incurred once the agreement with the respective governmental agency has been signed and all applicable conditions are met. Other government assistance, such as funding received for industrialization deployment and

local economic development in certain regions, are reported as a deduction of cost of sales or other operating expenses according to the underlying costs eligible to the grants.

The Group receives certain specific project-related research tax credits – “Crédit Impôt Recherche” – in the French tax jurisdiction. The Group considers the tax credits received as government grants based on the fact that the tax credits are received independently from tax payments of the Group. The Group recognizes these credits as long-term or short-term receivables depending on the expected time of collection. These credits are deducted from “Research and development” in the consolidated income statement or recorded as a reduction of intangible assets, as described in Note 7.6.7.5.

Capital investments

Capital investment funding is recorded as a reduction of “Property, plant and equipment” in the consolidated statement of financial position when the Group has incurred the eligible capital expenditures and when all conditions for eligibility have been fulfilled. Advances from capital grants received on capital investments that have not been incurred yet are reported in the line “Other non-current liabilities” in the consolidated statement of financial position. Capital investment funding is recognized in the Group’s consolidated income statement by offsetting the depreciation charges of the funded assets during their useful lives. The Group also receives funding, which can be recovered through the reduction of various government liabilities, including income tax, value-added tax and employee-related social charges.

When the funding has been classified as a long-term receivable with no tax attribute or legal restriction, it is reflected in the consolidated statement of financial position at its discounted net present value. The subsequent accretion of the discount is recorded as a non-operating income in “Finance income”.

Finance income

Finance income is calculated by applying the effective interest rate to the gross carrying amount of a financial asset, except for financial assets that subsequently become credit-impaired. For credit-impaired financial assets, the effective interest rate is applied to the amortized cost of the financial asset.

7.6.7.5. Research and development

R&D expenditures include costs incurred by the Group, the Group’s share of costs incurred by other R&D interest groups and costs associated with co-development contracts. Research costs are expensed as incurred.

Expenditures incurred on development projects, mainly related to the design and testing of new or improved products controlled by the Group, are recognized as “Intangible assets” in the consolidated statement of financial position when it is probable that the project will be a success considering its economic profitability and technological feasibility, and costs can be measured reliably, as described in Note 7.6.7.10. Certain research tax credits are also recognized as a reduction of intangible assets for the portion that can be reliably allocated to development projects. Development expenditures recognized as assets are amortized, when ready for their intended use, over their estimated useful lives, not exceeding three years (refer to Note 7.6.7.10). Development costs that do not meet the capitalization criteria are expensed as incurred. Development expenditures recognized as expenses are not recognized as assets in a subsequent period. Amortization expense recognized on capitalized development costs in use is recorded as “Cost of sales” in the consolidated income statement. Amortization expense on technologies and licenses purchased by the Group from third parties or acquired in a business combination to facilitate the Group’s R&D activities is recorded as “Research and development” in the consolidated income statement.

An impairment test is performed whenever a triggering event questions the future recoverability, or at least annually, for the capitalized development projects still not in use. A loss is recognized in the consolidated income statement as "Cost of sales" for the amount by which the asset's carrying amount exceeds its recoverable amount.

7.6.7.6. Current and deferred income tax

Income tax in the consolidated income statement for the period comprises current and deferred income tax. Income tax expense represents the income tax expected to be paid related to the current year taxable profit in each tax jurisdiction. Management periodically evaluates positions taken in tax returns with respect to situations in which applicable tax regulation is subject to interpretation. The Group determines whether it is probable that the taxing authorities will accept an uncertain tax treatment that has been taken or is expected to be taken on a tax return and the accounting for income tax is determined consistently with that tax treatment. If the Group concludes it is not probable that the treatment will be accepted, the effect of the uncertainty is reflected in its income tax accounting in the period in which that determination is made. The Group measures the impact of the uncertainty using the method that best predicts the resolution of the uncertainty; either the most likely amount method or the expected value method. In most cases, the Group applies the most likely amount method to determine the amount of uncertainty to be reflected in the consolidated financial statements, as the assessment generally relies on probabilities of possible outcomes that are either binary or concentrated on one value.

Deferred tax assets and liabilities are recorded for temporary differences arising between the book and tax bases of assets and liabilities and for the benefits of tax credits and operating loss carry-forwards. However, deferred income tax is not accounted for if it arises from initial recognition of an asset or liability in a transaction other than a business combination that, at the time of the transaction, affects neither accounting nor taxable profit or loss. For deferred tax related to assets and liabilities arising from a single transaction that, on initial recognition, give rise to equal amounts of taxable and deductible temporary differences. Moreover, deferred tax liabilities are not recognized if they arise from the initial recognition of goodwill. Deferred income tax is determined using tax rates and laws that have been enacted or substantively enacted by the reporting date and are expected to apply when the related deferred income tax asset is realized or the deferred income tax liability is settled. Deferred income tax assets are recognized to the extent that it is probable that future taxable profit will be available against which the temporary differences can be utilized.

The Group has determined that the global minimum top-up tax, which it may be required to pay under the OECD Pillar Two provisions as enacted in the tax legislation where the Group operates is an income tax under the scope of IAS 12. The Group applies the exception to recognizing and disclosing information about deferred tax assets and liabilities related to Pillar Two income taxes, as provided in the amendments to IAS 12 issued in May 2023.

Items recognized in other comprehensive income or directly in equity are recognized net of tax. Income taxes are recognized as cash flows from operating activities in the consolidated statement of cash flows.

7.6.7.7. Earnings per share

Basic earnings per share ("EPS") are calculated by dividing the net earnings attributable to the equity holders of the parent company by the weighted average number of ordinary shares outstanding during the period. Diluted EPS are calculated by dividing the net earnings attributable to the equity holders of the parent company (adding-back finance costs, net of tax effects, related to convertible debt if determined to be dilutive) by the weighted average number of ordinary shares and potential ordinary shares outstanding during the period. The weighted average shares used to compute diluted EPS include the incremental shares of ordinary shares related to unvested shares and convertible debt to the extent such incremental

shares are dilutive. Unvested shares with performance conditions are included in the diluted EPS calculation if their conditions have been met at the reporting date and if the awards are dilutive. If all the conditions have not been satisfied by the end of the period, the number of contingently issuable shares included in the diluted EPS is based on the number of shares that would be issuable if the end of the period were the end of the contingency period.

7.6.7.8. Cash and cash equivalents

Cash and cash equivalents include cash on hand, deposits held at call with external financial institutions and other short-term highly liquid investments with effective maturities of three months or less. They are both readily convertible to known amounts of cash and so near their maturity that they present insignificant risk of changes in value because of changes in interest rates.

Short-term deposits representing cash equivalents with maturity beyond three months and below one year are reported as current assets in the line "Short-term deposits" of the consolidated statement of financial position.

7.6.7.9. Inventories

Inventories are stated at the lower of cost and net realizable value. Actual cost is based on an adjusted standard cost, which approximates cost on a first-in, first-out basis for all categories of inventory (raw materials, work-in-process, finished products). Actual cost is therefore dependent on the Group's manufacturing performance and is based on the normal utilization of its production capacity. In case of underutilization of manufacturing facilities, the costs associated with unused capacity are not included in the valuation of inventories but charged directly to cost of sales. Net realizable value is based upon the estimated selling price in the ordinary course of business, less reasonably predictable costs of completion, disposal and transportation.

As described in Note 7.6.7.15, the Group hedges a portion of its Euro-denominated front-end manufacturing costs of semi-finished goods as well as certain Singapore dollar-denominated forecasted transactions. The Group adjusts the initial carrying amount of inventory by the cumulative amount of the hedging instrument fair value changes recorded as other comprehensive income for settled hedging transactions.

Inventory reserve is estimated for excess uncommitted inventory based on historical sales data, order backlog and production plans. The Group performs, on a continuous basis, write-offs of inventories, which have the characteristics of slow-moving, old production dates and technical obsolescence. The Group evaluates its inventory to identify obsolete or slow-selling items, as well as inventory that is not of saleable quality and records a specific reserve if the Group estimates the inventory will eventually be written-off. Inventory associated with obsolete or uncommitted inventory is expensed to "Cost of sales" in the consolidated income statement.

7.6.7.10. Intangible assets with definite useful lives

Intangible assets acquired separately are recognized at cost in the consolidated statement of financial position and include technologies and licenses purchased from third parties and purchased software. The cost of intangible assets acquired in a business combination is the acquisition-date fair value.

Expenditures incurred on development projects, mainly related to the design and testing of new or improved products controlled by the Group, and internally generated software developed for the Group's internal use are recognized as intangible assets when the Group can demonstrate all of the following:

- the technical feasibility of completing the item under development so that it will be available for use or sale;
- its intention to complete the item under development and ability to use it or sell it;
- how the item under development will generate probable future economic benefits;
- the availability of adequate technical, financial and other resources to complete the development and to use or sell the item under development; and
- its ability to measure reliably the expenditures attributable to the project during its development.

Refer to Note 8.3.13 for composition of Company's legal reserves, which includes capitalized development costs and internally developed software.

Expenditures incurred on development projects that do not meet these criteria and all research activities are recognized as expenses when incurred.

Development costs are amortized, when the development is complete, on a straight-line basis over the period of their expected benefits, not exceeding three years.

Amortization begins when the intangible asset is available for its intended use. Amortization reflects the pattern in which the asset's economic benefits are consumed, which usually consists in applying the straight-line method to allocate the cost of the intangible asset over the estimated useful life. The amortization period and the amortization method for an intangible asset with a definite useful life are reviewed at least at each financial year end.

A summary of the policies applied to the Group's intangible assets is as follows:

	Technologies and licenses	Purchased software	Internally developed software	Capitalized development costs
Useful lives	Definite	Definite	Definite	Definite
Amortization method used	Straight line basis over estimated useful life / 3-11 years	Straight line basis over estimated useful life / Max 4 years	Straight line basis over estimated useful life / Max 4 years	Straight line basis over estimated useful life / 3-5 years
Internally generated or acquired	Acquired	Acquired	Internally generated	Internally generated

Intangible assets not ready to use, such as some capitalized development expenditures, are tested annually for impairment. The carrying value of intangible assets with definite useful lives and subject to amortization is assessed for impairment at the level of a CGU whenever there is an indication that intangible assets may be impaired. An impairment loss is recognized in the consolidated income statement for the amount by which the carrying amount exceeds the recoverable amount. The recoverable amount is the higher of an asset's fair value less costs of disposal and value in use. In determining recoverability, the Group usually estimates the value in use based on the projected discounted future cash flows associated with the intangible assets. The Group makes maximum use of market inputs and minimizes the use of unobservable inputs when measuring fair value. Prior impairment charges on intangible assets other than goodwill are reviewed for possible reversal at each reporting date.

7.6.7.11. Property, plant and equipment

Property, plant and equipment are stated at historical cost, net of public funding, accumulated depreciation and any impairment losses. Property, plant and equipment acquired in a business combination are recognized at fair value at the acquisition date. Major additions and improvements are capitalized, while minor replacements and repairs are expensed and reported as "Cost of sales", "Selling,

general and administrative expenses”, or “Research and development expenses” in the consolidated income statement according to their intended use.

Land is not depreciated. Depreciation on fixed assets is computed using the straight-line method over the following estimated useful lives:

Nature of tangible asset	Estimated useful life
Buildings	33 years
Facilities & leasehold improvements	5-10 years
Machinery and equipment	2-10 years
Computer and R&D equipment	3-6 years
Other	2-5 years

The Group evaluates in each period whether the assets’ useful lives should be reviewed, and adjusted if appropriate, at the end of each reporting period. The Group also evaluates in each period whether there is a reason to suspect that tangible assets or groups of assets might not be recoverable. Several impairment indicators exist for making this assessment such as: restructuring plans, significant changes in the technology, market, economic or legal environment in which the Group operates, available evidence of obsolescence of the asset, or indication that its economic performance is, or will be, worse than expected. For the purposes of assessing impairment, assets are grouped at the lowest levels for which there are separately identifiable cash flows (cash-generating units). An impairment loss is recognized in the consolidated income statement for the amount by which the asset’s carrying amount exceeds its recoverable amount. The recoverable amount is the higher of an asset’s fair value less costs of disposal and value in use. The fair value is usually estimated by the Group based on independent market appraisals and the value in use by applying the income approach. The Group makes maximum use of market inputs and minimizes the use of unobservable inputs when measuring fair value.

When property, plant and equipment are retired or otherwise disposed of, the net book value of the assets is removed from the Group’s books and the net gain or loss is included in “Other income” or “Other expenses” in the consolidated income statement.

7.6.7.12. Leases

The Group assesses at contract inception whether a contract implying the use of an asset is, or contains, a lease, which is the case if the contract conveys the right to control the use of an identified asset for a period of time in exchange for consideration. The Group recognizes right-of-use assets at the commencement date of the lease as a category of “Property, plant and equipment” in the consolidated statement of financial position. The corresponding lease liabilities are reported on the line “Other non-current financial liabilities” on the consolidated statement of financial position when payment is expected beyond twelve months, and in the line “Other current financial liabilities” for the current portion of the lease obligations. Lease arrangements with a sum of lease payments not exceeding \$5,000 or a total duration lower than twelve months without a purchase option are excluded from capitalization.

The right-of-use asset is initially measured at cost, and subsequently at cost less accumulated depreciation and any impairment losses or adjusted for certain re-measurements of the lease liability when deemed necessary. For income statement purposes, the depreciation charge on right-of-use assets is recorded on a straight-line basis over the lease period and reported as “Cost of sales”, “Selling, general and administrative expenses”, or “Research and development expenses” in the consolidated income statement according to the intended use of the leased asset.

The lease liability is initially measured at the present value of the lease payments that are not paid at the commencement date, discounted using the interest rate implicit in the lease or, if that rate cannot be readily

determined, the Group's incremental borrowing rate. Generally, the Group uses its incremental borrowing rate as the discount rate. The lease liability is subsequently increased by the interest cost of the lease liability and decreased by the lease payments. The interest cost is reported in the line "Finance costs" of the consolidated income statement. The Group has applied judgment to determine the lease term for some lease contracts with renewal options. The assessment of whether the Group is reasonably certain to exercise such options impacts the lease term, which affects the amount of reported lease liabilities and corresponding right-of-use assets. The carrying amount of lease liabilities is remeasured if there is a modification, a change in the lease term, a change in the lease payments or a change in the assessment of an option to purchase the underlying asset. Variable lease payments based on an index or a rate are initially measured using the index or rate as of the commencement date. Potential future increases in variable lease payments based on an index or rate are not included in the lease liability until they take effect. When adjustments to lease payments based on an index or rate take effect, the lease liability is reassessed and adjusted against the right-of-use asset.

For cash flow presentation purposes, cash payments for the principal portion of the lease liabilities are reported as cash flows used in financing activities. The interest expense recorded on the subsequent measurement of lease liabilities are reported within cash flows from operations, consistent with the Group's cash flow presentation for interest paid. Short-term lease payments and payments for leases of low-value assets are reported as operating outflows.

7.6.7.13. Financial Assets

7.6.7.13.1. Offsetting financial instruments

Financial assets and liabilities are offset and the net amount reported in the consolidated statement of financial position when there is a legally enforceable right to offset the recognized amounts and there is an intention to settle on a net basis or realize the asset and settle the liability simultaneously.

7.6.7.13.2. Classification

The Group classifies its financial assets according to the following measurement categories:

- those measured at fair value, either at FVOCI or at FVPL; and
- those measured at amortized cost.

Publicly traded equity securities are measured at FVPL while the Group has made the irrevocable election to measure equity securities with no readily determinable fair value at FVOCI, with subsequent changes in fair value not recycled through earnings. Derivative instruments that are not designated as hedging instruments are measured at FVPL. Debt instruments, loans and receivables are measured at amortized cost or FVOCI, depending on the Group's business model in managing the assets. When the contractual terms of cash flows do not solely correspond to payments of principal and interest (the "SPPI criterion"), the financial asset is mandatorily measured at FVPL.

7.6.7.13.3. Recognition and measurement

Regular purchases and sales of financial assets are recognized on the trade date, which is the date the Group commits to purchase or sell the asset. Investments are initially recognized at fair value plus transaction costs for all financial assets not carried at fair value through profit or loss. Financial assets carried at fair value through profit or loss, are initially recognized at fair value, and transaction costs are expensed in the consolidated income statement. Financial assets are derecognized when the rights to receive cash flows from the investments have expired or have been transferred and the Group has transferred substantially all risks and rewards of ownership.

Debt instruments

Subsequent measurement of debt instruments depends on the Group's business model for managing the asset and its cash flow characteristics. The contractual cash flows related to all debt instruments held by the Group meet the SPPI criterion. There are two measurement categories into which the Group classifies its debt instruments:

- **Amortized cost:** Assets that are held for collection of contractual cash flows are measured at amortized cost. These assets typically correspond to trade accounts receivable, other receivables, long-term loans and long-term receivables. They are reported as current, except for maturities greater than twelve months after the reporting date, which are classified as non-current.
- **FVOCI:** Assets that are held for collection of contractual cash flows or for selling are measured at FVOCI. Movements in the carrying amount are taken through OCI, except for the recognition of impairment losses, interest income and foreign exchange gains and losses, which are recognized in the consolidated income statement. When the financial asset is derecognized, the cumulative gain or loss previously recognized in OCI is recycled from equity to earnings, within "Other income" or "Other expenses" in the consolidated income statement, when the transactions for such instruments are related to the Group's operating activities. Gains and losses arising from financial assets not related to the operating activities of the Group are presented within "Finance income" and "Finance costs" in the consolidated income statement. Debt instruments measured at FVOCI are included in non-current assets unless management intends to dispose of the investment within twelve months after the reporting date or if they represent investments of funds available for current operations.

Equity securities

The Group subsequently measures all equity securities at fair value. The Group has elected to irrevocably measure equity securities with no readily determinable fair value at FVOCI, with no subsequent reclassification of fair value gains and losses, including impairment, from equity to earnings following the derecognition of the financial assets.

Gains and losses arising from changes in the fair value of publicly traded equity securities, which are measured at FVPL, are presented in the consolidated income statement within "Other income" or "Other expenses" in the period in which they arise, when the transactions for such instruments are related to the Group's operating activities. Gains and losses arising from changes in fair value of these financial assets not related to the operating activities of the Group were presented within "Finance income" and "Finance costs" in the consolidated income statement.

7.6.7.13.4. Impairment of financial assets

The Group assesses on a forward-looking basis the expected credit losses associated with its debt instruments carried at amortized cost and FVOCI. The impairment methodology applied depends on whether there has been a significant increase in credit risk. The impairment methodology by category of financial assets is further described in Note 7.6.37.

For trade receivables, the Group applies the simplified approach required by IFRS 9, which requires expected lifetime credit losses to be recognized from initial recognition of the receivables as further described in Note 7.6.17.

7.6.7.14. Trade accounts receivable

Trade accounts receivable are amounts due from customers for goods sold or services rendered to third parties in the ordinary course of business. The accounts receivable are recognized initially at transaction price and subsequently measured at amortized cost using the effective interest method, less provision for expected credit losses. The carrying amount of the asset is reduced through the use of a credit loss allowance, and the amount of the credit loss is recognized as "Selling, general and administrative expenses" in the consolidated income statement. When a trade receivable is uncollectible, it is written-off against the impairment account for trade receivables. Subsequent recoveries of amounts previously written off are credited against "Selling, general and administrative expenses" in the consolidated income statement. The impairment policies on trade receivables are further described in Note 7.6.17 and 7.6.37.

In the event of sales of receivables and factoring, the Group derecognizes the receivables and accounts for them as a sale only to the extent that the receivables have been transferred outside the consolidated group and the Group has transferred substantially all the risks and rewards of ownership of the receivables.

7.6.7.15. Derivative financial instruments and hedging activities

Derivative financial instruments are classified as financial instruments measured at FVPL unless they are designated as effective hedging instruments. All derivatives are carried as assets when their fair values are positive and as liabilities when their fair values are negative.

Derivative financial instruments not designated as a hedge

The worldwide operations of the Group lead to an exposure to adverse movements in foreign currency exchange rates. The Group enters into foreign currency forward contracts and currency options to reduce its exposure to changes in exchange rates and the associated risk arising from the denomination of certain assets and liabilities in foreign currencies at the Group's subsidiaries. In addition, forward contracts and currency options, including collars, are also used by the Group to reduce its exposure to U.S. dollar fluctuations in Euro-denominated forecasted intercompany transactions that cover a large part of R&D expenditures and certain corporate expenses incurred by subsidiaries on behalf of STMicroelectronics International N.V. These intercompany transactions are not closely linked to ultimate transactions with third parties and consequently, these derivatives do not qualify as hedging instruments under the requirements of IFRS 9.

These derivative financial instruments are initially and subsequently recorded at fair value. Fair value adjustments and realized gains and losses are recognized in the consolidated income statement in the line "Other income" or "Other expenses".

Derivative financial instruments designated as hedge

These instruments correspond to forward currency contracts and currency options, including collars, which are entered into by the Group to hedge exposure to foreign currency fluctuations.

For the purpose of hedge accounting, the hedging transactions are classified as cash flow hedge as they hedge exposure to variability in cash flows of highly probable forecasted transactions.

The following criteria must be in place before the Group applies hedge accounting:

- at the inception of the transaction, the Group formally documents the economic relationship between hedging instruments and hedged items, as well as its risk management objectives and strategy for undertaking the hedge;

- the Group also documents its assessment, both at hedge inception and on an ongoing basis, of whether the derivatives that are used in hedging transactions are highly effective in offsetting changes of cash flows of hedged items; and
- the highly probable forecasted transactions designated as hedged items will ultimately affect the consolidated income statement.

To further reduce its exposure to U.S. dollar exchange rate fluctuations, the Group hedges a portion of its Euro-denominated forecasted purchases of products with underlying front-end manufacturing production costs of semi-finished goods incurred in Euros, since these transactions are considered highly probable to occur and are closely linked to ultimate transactions with third parties. Additionally, the Group hedges certain Singapore dollar-denominated manufacturing forecasted transactions.

These derivative financial instruments are initially recognized at fair value. The effective portion of the gain or loss on the hedging instrument is recognized in other comprehensive income. The Group has elected to designate the full change in fair value, including the time value of options or combination of options, as the hedging instrument.

7.6.7.16. Employee benefits

The Group operates various post-employment schemes, including both defined benefit and defined contribution pension plans.

Pension obligations

The Group sponsors various pension schemes for its employees. These schemes conform to local regulations and practices of the countries in which the Group operates. Defined benefit pension plans define amounts of pension benefits that employees will receive on retirement, usually dependent on one or more factors such as age, years of service and compensation. The liability recognized in the line "Employee benefits" in the consolidated statement of financial position in respect of defined benefit pension plans is the present value of the defined benefit obligation at the reporting date less the fair value of plan assets. Significant estimates are used in determining the assumptions incorporated in the calculation of the pension obligations, which is supported by input from independent actuaries. The defined benefit obligation is calculated annually using the projected unit credit method. The present value of the defined benefit obligation is determined by discounting the estimated future cash outflows using in most cases interest rates of high-quality corporate bonds that are denominated in the currency in which the benefits will be paid, and that have terms to maturity approximating the terms of the related pension obligation.

Actuarial gains and losses arising from experience adjustments and changes in actuarial assumptions are charged or credited to equity in other comprehensive income in the period in which they arise. Past service costs are recognized immediately in profit or loss.

For defined contribution plans, the Group pays contributions to publicly or privately administered pension insurance plans on a mandatory, contractual or voluntary basis. The Group has no further payment obligations once the contributions have been paid. The contributions are recognized as employee benefit expense when they are due. Prepaid contributions are recognized as an asset to the extent that a cash refund or a reduction in the future payments is available.

Other long-term employee benefits

The Group provides long-term employee benefits such as seniority awards in certain countries. The entitlement to these benefits is usually conditional on the employee completing a minimum service period. The expected costs of these benefits are accrued over the period of employment. Actuarial gains and

losses arising from experience adjustments, and changes in actuarial assumptions, are charged or credited to earnings in the period of change. These obligations are valued annually with the assistance of independent qualified actuaries.

Termination benefits

Termination benefits are payable when employment is terminated by the Group before the normal retirement date, or whenever an employee accepts voluntary termination in exchange for these benefits. The Group recognizes termination benefits at the earlier of the following dates: (a) when the Group can no longer withdraw the offer of those benefits; and (b) when the entity recognizes costs for a restructuring that is within the scope of IAS 37 and involves the payment of termination benefits. In the case of an offer made to encourage voluntary leaves, the Group bases the measurement of termination benefits on the number of employees accepting the offer. Benefits falling due more than twelve months after the reporting date are discounted to present value.

Profit-sharing and bonus plans

The Group recognizes a liability and an expense for bonuses and profit-sharing plans when it is contractually obliged or where there is a past practice that has created a constructive obligation.

Share-based compensation

All the share plans of the Group are equity settled.

The fair value of the employee services received in exchange for the grant of share-based awards is recognized as an expense and as a corresponding increase in shareholders' equity. The total amount to be expensed over the vesting period, which is the period over which all of the specified vesting conditions are to be satisfied, is determined by reference to the fair value of awards granted is measured based on the market price of the underlying shares at the date of grant, as observed on the New York Stock Exchange, reduced by the present value of the dividends expected to be paid on the shares during the requisite service period. No other features of the equity instruments granted is incorporated in the fair value measurement. Non-market performance and service conditions are included in assumptions about the number of instruments that are expected to vest. Any applicable employee social charges are also expensed ratably over the same period as the share-based compensation expense.

At the end of each reporting period, the Group revises its estimates of the number of instruments that are expected to vest based on the non-market vesting conditions. It recognizes the impact of the revision to original estimates, if any, in the consolidated income statement, with a corresponding adjustment to equity.

7.6.7.17. Financial Debt

Bank loans

Bank loans are recognized initially at fair value, net of transaction costs incurred, if any. They are subsequently stated at amortized cost; any difference between the proceeds (net of transaction costs) and the redemption value is recognized within "Finance costs" in the consolidated income statement over the period of the borrowings using the effective interest method.

Borrowings are classified as current liabilities unless the Group has at the reporting date an unconditional right to defer settlement of the liability for at least twelve months after the reporting date.

Hybrid financial instruments

The Group issued in 2020 convertible bonds that can be converted to share capital at the option of the holder and that are callable by the Group, in certain events and circumstances, but for which the number of shares to be issued does vary.

The issuer's call option and the bondholder's conversion option are embedded non-equity derivative instruments and are recognized separately from the debt host contract. Upon initial recognition, the derivatives are measured at fair value, and the debt is measured as a residual amount. The debt is subsequently measured at amortized cost using the effective interest method. The embedded derivatives are measured at fair value through profit and loss, with changes in fair value reported in the line "Finance costs" or "Finance income" in the consolidated income statement.

7.6.7.18. Equity

Ordinary share capital

The Company has issued ordinary shares that are classified as equity. Incremental external costs that are directly attributable to the issuance of these shares are recognized in equity, net of tax.

Treasury shares

Own equity instruments which are acquired (treasury shares) are deducted from equity for the consideration paid including any directly attributable incremental costs (net of taxes). No gain or loss is recognized in the income statement on the purchase, sale, issue or cancellation of the Company's own equity instruments.

Dividends on ordinary share capital

Dividends on ordinary shares are recognized as a liability and deducted from equity when they are approved by the Company's shareholders.

Dividends for the year that are approved after the reporting date are dealt with as an event after the reporting date.

7.6.7.19. Trade payables

Trade accounts payable are obligations to pay for goods or services that have been acquired in the ordinary course of business from suppliers. Trade payables are recognized initially at fair value and subsequently measured at amortized cost using the effective interest method when maturity of the payables exceeds one year.

7.6.7.20. Provisions

Provisions for restructuring costs and legal claims, if any, are recognized when: the Group has a present legal or constructive obligation as a result of past events; it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation; and the amount has been reliably estimated. Provisions are not recognized for future operating losses.

If the effect of time value of money is material, provisions are discounted using a current pre-tax rate that reflects current market assessments of the time value of money and, when appropriate, the risk specific to the obligation. The increase in the provision due to passage of time is recognized as finance cost.

As of December 31, 2024 and 2023 the Group did not have material provisions.

7.6.7.21. Contingencies

The Group is subject to the possibility of loss contingencies arising in the ordinary course of business. These include but are not limited to: warranty cost on the products of the Group, breach of contract claims, claims for unauthorized use of third-party IP, tax claims and provisions for specifically identified income tax exposures as well as claims for environmental damages. In determining loss contingencies, the Group considers the likelihood of a loss of an asset or the incurrence of a liability as well as the ability to reasonably estimate the amount of such loss or liability. The Group regularly evaluates claims to determine whether provisions need to be recorded based on the most current information available to the Group. Changes in these evaluations could result in adverse, material impact on the Group's results of operations, cash flows or its financial position for the period in which they occur.

7.6.7.22. Segment reporting

Operating segments are defined as a component of the entity that (i) engages in business activities from which it may earn revenues and incur expenses, (ii) whose operating results are regularly reviewed by the entity's Chief Operating Decision Maker ("CODM") - members of the Managing Board under the supervision of the Supervisory Board, to make decisions about resources to be allocated to the segments and assess its performance and (iii) for which discrete financial information is available.

For the computation of the segments' internal financial measurements, the Group uses certain internal rules of allocation for the costs not directly chargeable to the segments, including cost of sales, SG&A expenses, and a part of R&D expenses. In compliance with the Group's internal policies, certain costs are not allocated to the segments, but reported in "Others". Those comprise unused capacity charges, including incidents leading to power outage, certain unallocated impairment and restructuring charges, management reorganization expenses, start-up and phase-out costs, and other unallocated income (expenses) such as: strategic or special R&D programs, certain corporate-level operating expenses, patent claims and litigations, and other costs that are not allocated to reportable segments, as well as operating earnings of other products.

Wafer costs are allocated to the segments based on actual cost. From time to time, with respect to specific technologies, wafer costs are allocated to segments based on market price.

7.6.8. Critical accounting estimates and judgments

Estimates and judgments are continually evaluated and are based on historical experience and other factors, including expectations of future events that are believed to be reasonable under current circumstances. The Group operates on a worldwide basis in an economic environment impacted by many risk factors, which generates uncertainties on future economic conditions. These risk factors include, but are not limited to, macro-economic factors such as inflationary trends and geopolitical uncertainties as well as sustainability and climate change specific risks, with a direct impact on the Group's forward-looking growth and financial outlook. The Group operated in 2024 with solid fundamentals and a strong capital structure. There are no conditions and events which raise substantial doubt about the Group's ability to continue as a going concern, in light with: its current financial condition, including its liquidity sources; its obligations – due or anticipated; the funds necessary to maintain the Group's operations; and other conditions and events, if any.

The uncertainties arisen from these business conditions have been factored in the critical accounting estimates and judgements made in preparing these consolidated financial statements, on the basis of all known facts and circumstances and reasonable and supportable forecast of future conditions. However, the impact on future economic performance cannot be fully determined and is closely monitored on an on-going basis by means of different scenarios.

No events or changes in circumstances indicated in 2024 that the carrying amount of major tangible assets, including lease right-of-use assets, might not be recoverable or that useful lives might not be appropriate. The Group also reviewed the recoverability of its intangible assets, including capitalized development costs. On the latter, the Group recorded a total impairment charge of \$77 million in 2024. Refer to Note 7.6.12 for further details on amounts capitalized, amortized and impaired during the year.

There is no major contingency to be reported as of December 31, 2024. The tax loss carryforwards capitalized as deferred tax assets are deemed recoverable in all major tax jurisdictions. To consider any potentially increased risk of default on accounts receivable, the Group adjusted the expected credit loss assumptions to reflect current conditions, reasonable and supportable forecast of future conditions and how current uncertainties may impact customers' and other debtors' future credit quality. This reassessment did not have any material effect on the expected credit loss allowances reported by the Group on its major categories of financial assets as of December 31, 2024.

The Group makes estimates and assumptions concerning the future. The resulting accounting estimates will, by definition, seldom equal the related actual results. Estimates and assumptions that have a significant risk of causing material adjustments to the carrying amounts of assets and liabilities within the next financial year are described below.

7.6.8.1. Right-of-use assets and lease liabilities

Significant assumptions and judgements may be made in applying the requirements of lease accounting, such as the exercise of extension or renewal options and the determination of applicable discount rates.

The Group determines the lease term as the non-cancellable term of the lease, together with any periods covered by an option to extend the lease if it is reasonably certain to be exercised, or any periods covered by an option to terminate the lease, if it is reasonably certain not to be exercised.

The Group has elected not to recognize right-of-use assets and lease liabilities for some leases of low-value and for leases which term ends within 12 months with no purchase option at the date of initial application (primarily for certain office and IT small equipment). The Group leases land, buildings, cars and certain equipment (including IT equipment) which have remaining lease terms between less than one year and 49 years. Certain lease contracts contain options to extend the leases by up to 30 years. The Group applies judgement in evaluating if and when it is reasonably certain for the Group to exercise that option. In addition, the Group made an accounting policy election for all the asset classes to not account for short-term leases, as described in Note 7.6.7.12. The Group considers all relevant factors that create an economic incentive to exercise any existing option to extend or renew a lease arrangement. After the commencement date, the Group reassesses the lease term if there is a significant event or change in circumstances that is within its control and affects its ability to exercise or not exercise the option. In most cases, the Group has included the extension or renewal option as part of the lease term of plants, buildings and equipment when the controlled use of the leased assets is significant and critical to its operations. These leases generally include a non-cancellable period and there will be a significant negative effect on the normal course of the Group's business, should a replacement not be readily available.

In calculating the present value of lease payments, the rate implicit in the lease should be used whenever that rate is readily determinable. In most cases, this rate is not readily determinable and the Group uses its incremental borrowing rate, which is derived from information available at the lease commencement date. The Group gives consideration to its recent debt issuance as well as publicly available data for

instruments with similar characteristics when calculating its incremental borrowing rates. Due to immateriality of any intra-quarter discount rate changes, the Group determines the discount rate based on the mid-quarter date.

Lease term and discount rate are as follows:

	As of December 31, 2024	As of December 31, 2023
Weighted average remaining lease term (in years)	9	9
Weighted average discount rate	3.82%	3.65%

7.6.8.2. Income taxes

The Group is required to make estimates and judgments in determining income tax for the period, comprising current and deferred income tax. The Group needs to assess the income tax expected to be paid or the income tax benefit expected to be received related to the current year earnings in each tax jurisdiction and recognizes deferred income tax for temporary differences arising between the tax bases of assets and liabilities and their carrying amount in the consolidated financial statements, except when the initial recognition exception applies, as described in Note 7.6.7.6. Furthermore, the Group is required to assess all material open income tax positions in all tax jurisdictions to determine any uncertain tax positions, and to record a provision for those, if any.

The Group is also required to assess the likelihood of recovery of its deferred tax assets originated by the net operating losses carried forward. This assessment requires the exercise of judgment with respect to, among other things, benefits that could be realized from available tax strategies and future taxable income, as well as other positive and negative factors. The ultimate realization of deferred tax assets is dependent upon, among other things, the Group's ability to generate future taxable income that is sufficient to utilize loss carry-forwards or tax credits before their expiration or the Group's ability to implement prudent and feasible tax planning strategies.

As of December 31, 2024, the Group reported deferred tax assets of \$326 million (2023: \$414 million) on the consolidated statement of financial position. A significant portion of these deferred tax assets was recorded in relation to net operating losses incurred in certain tax jurisdictions. These net operating losses may not be realizable before their expiration, unless the Group is capable of identifying favorable tax strategies.

The Group could reduce the amount of total deferred tax assets, resulting in a decrease in the total assets and, consequently, in equity, if the estimates of projected future taxable income and benefits from available tax strategies are reduced as a result of a change in the assessment or due to other factors, or if changes in current tax regulations are enacted that impose restrictions on the timing or extent of the Group's ability to utilize net operating losses and tax credit carry-forwards in the future. In 2024, the Group recorded a \$14 million income tax expense resulting from changes in the recognition of unrecognized tax losses. A change in the tax rates applicable in the various jurisdictions or unfavorable outcomes of any ongoing tax audits could have a material impact on the future tax provisions in the periods in which these changes could occur.

Pillar II legislation has been enacted in certain jurisdictions in which the Group operates (Netherlands, the majority of the European Countries and Switzerland). The legislation is effective for the Group's financial year beginning January 1, 2024. The Group is in the scope of the Pillar II legislation.

The assessment of the 2024 exposure to Pillar II income taxes is based on the most recent tax filings, 2024 draft country-by-country reporting prepared based on the US GAAP financial statements for the constituent entities in the Group. Based on the assessment, the Pillar II effective tax rates in most of the jurisdictions are above 15%. However, there is a limited number of jurisdictions where the transitional safe

harbour relief does not apply and the Pillar II effective tax rate is slightly below 15%. Therefore, the Group has recorded a tax exposure to Pillar II income taxes of \$9 million in those jurisdictions. The Group is continuously monitoring the Pillar II legislation and related guidance which are still evolving and may have an impact on the Group's Pillar II tax charge in future periods.

The Group operates in many jurisdictions with highly complex and varied tax regimes. Management applies professional judgement in assessing whether relevant tax authorities will accept reported tax treatments under tax law. Those uncertainties may arise when tax laws are not clear or not consistently understood, which generates ambiguity in the tax law interpretations and application. Those uncertainties are particularly present in tax jurisdictions or tax regimes where the expected amount to be paid or the expected tax benefit to be recognized arise from complex, lengthy and technical negotiations or require possible settlements involving a high degree of subjectivity and discretion.

Assumptions and estimates used in the assessment of uncertainties over income tax treatments include, but are not limited to: whether certain income tax treatments are considered jointly or separately when assessing their degree of uncertainty; the assumptions the Group makes about the examination of tax treatments by taxing authorities; how the Group determines taxable profits, deductions taken on tax returns, unused tax losses, unused tax credits, applicable tax rates, the probability of acceptance of these income tax treatments by the relevant taxing authorities or on the contrary to what extent the income tax treatments as applied by the Group may be disallowed, including the outcome of unresolved disputes or settlements on existing tax audits; and consideration of changes in facts and circumstances requiring a reassessment of applied judgments and assumptions.

As of December 31, 2024 and December 31, 2023, the Group reported unrecognized tax benefits for uncertain tax treatments totaling \$48 million and \$55 million, respectively. It is reasonably possible that certain uncertainties over tax treatments could increase or decrease within the next 12 months due to changes in facts and circumstances, such as ongoing tax audits or taxing authority new decisions. The Group is not able to make an estimate of the range of the reasonably possible change. Accrued interest and penalties amounted to \$6 million as of December 31, 2024 (\$6 million as of December 31, 2023). The tax years that remain open for review in the Group's major tax jurisdictions are from 1997 to 2024.

7.6.8.3. Impairment of non-financial assets

An impairment exists when the carrying value of an asset or cash generating unit exceeds its recoverable amount, which is the higher of its fair value less costs of disposal and its value in use. The fair value less costs of disposal calculation is based on observable market prices less incremental costs of disposing the asset, in order to measure the price at which the asset could be sold in an orderly transaction between market participants at the measurement date. In case observable market prices are not available, fair value less costs of disposal could be measured based on data from binding sales transactions in arm's length transactions of similar assets. For the current year's annual impairment test, the recoverable amount of the CGUs was determined based on value-in-use calculations. Non-financial assets are tested or reviewed for impairment in accordance with accounting policies stated in Notes 7.6.7.1, 7.6.7.10, 7.6.7.11 and 7.6.7.12. Management judgment is necessary to identify impairment indicators and to estimate future sales and expenses, which underlie the discounted future cash flow projections. Factors such as changes in the planned use of property, plant and equipment, the closure of facilities, the change in the use or in the market acceptance of certain new technologies, could result in shortened useful lives or impairment charges to be recognized in the period in which such determination is made.

7.6.8.4. Pension obligations

The Group sponsors various pension schemes for its employees. The expense incurred under the defined benefit pension plans is based upon statistical and actuarial calculations and is impacted by assumptions on discount rates used to reach the present value of future pension liabilities, expected return that will be

made on existing pension assets, future salary increases as well as future pension increases and statistical-based assumptions covering future withdrawals of participants from the plan and estimates of life expectancy. Refer to Note 7.6.22.

The actuarial assumptions used may differ materially from actual results due to changes in market and economic conditions, higher or lower withdrawal rates or longer or shorter life spans of participants and may significantly impact the amount of pension costs and pension liabilities to be recognized in the period in which such determination is made.

7.6.8.5. Capitalized development costs

Development costs are capitalized in accordance with the accounting policy described in notes 7.6.7.5. and 7.6.7.10. Initial capitalization of costs is based on management's judgment that economic profitability and technological feasibility are confirmed, usually when a product or technology has reached a certain maturity level in product life cycle model used by the Group. In determining the projects to be capitalized, management makes assumptions regarding the expected future cash generation of the project and the expected period of benefits. As of December 31, 2024, the carrying amount of capitalized development costs was \$1,170 million (2023: \$1,098 million). Refer to Note 7.6.12 for disclosure of amounts capitalized, amortized and impaired during the period.

7.6.8.6. Inventory obsolescence reserves and normal manufacturing capacity thresholds

Inventory is stated at the lower of cost or net realizable value. Actual cost is based on an adjusted standard cost which approximates cost on a first-in, first-out basis for all categories of inventory (raw materials, work-in-process, finished products). Actual cost is therefore dependent on the Group's manufacturing performance and is based on the normal utilization of its production capacity. In case of underutilization of manufacturing facilities, the costs associated with unused capacity are not included in the valuation of inventories but charged directly to cost of sales. For the year ended December 31, 2024, the unused capacity charges amounted to \$370 million compared to \$120 million for the year ended December 31, 2023. Net realizable value is the estimated selling price in the ordinary course of business, less predictable costs of completion, disposal and transportation. Refer to Note 7.6.16.

Reserve for obsolescence is estimated for excess uncommitted inventory based on historical sales data, order backlog and production plans. The Group performs, on a continuous basis, inventory write-offs of inventories, which have the characteristics of slow-moving, old production dates and technical obsolescence. The Group evaluates its inventory to identify obsolete or slow-selling items, as well as inventory that is not of saleable quality and records a specific reserve if the Group estimates the inventory will eventually be written off.

7.6.8.7. Control assessment and consolidation

An entity is fully consolidated and considered as a subsidiary when the Group controls the investee, which is when the Group has all of the following: (i) power over the investee, (ii) exposure, or rights, to variable returns from its involvement with the investee and; (iii) the ability to use its power over the investee to affect the amount of the investor's returns. In most cases, it is clear that the Group has control through a major equity stake conferring the majority of voting rights, requiring consolidation. Investments in subsidiaries are listed in Note 7.6.9.

In 2023, the Group and Sanan Optoelectronics jointly created Sanan ST JV for high-volume 200mm SiC device manufacturing activities in China. The purpose of the entity is to support the rising demand for the

Group's SiC devices for car electrification and industrial power and energy applications in China. With the creation and future operations of Sanan ST JV, the Group seeks to create a fully integrated vertical value chain aiming at serving the Chinese electrification market. Sanan Optoelectronics will build a separate 200mm SiC substrate manufacturing facility to fulfill Sanan ST JV's needs. Sanan ST JV will produce SiC devices exclusively for the Group, using the Group's proprietary SiC manufacturing process technology and know how and serving as a dedicated foundry to support the Group's demand for Chinese customers.

The Group fully consolidates Sanan ST JV, with the recognition of 51% noncontrolling interest. Noncontrolling interest amounted to \$156 million as of December 31, 2024 compared to \$52 million as of December 31, 2023. This increase includes a \$104 million contribution from Sanan Optoelectronics to Sanan JV's capital increase in 2024. No gain or loss was recognized on the initial consolidation of the entity as no fair value measurement was required, Sanan ST JV being a newly incorporated entity. Profit and loss reported by Sanan ST JV for the year ended December 31, 2024 and 2023 were not significant. The carrying amount of Sanan ST JV's main assets and liabilities, together with their classification in the consolidated statement of financial position as of December 31, 2024 and 2023, are separately disclosed in Note 7.6.10 and Note 7.6.21.

The agreement signed between Sanan Optoelectronics and the Group includes further capital subscriptions of both shareholders on a proportional equity interest basis. The total amount for the full build out of the entity will also be financed by local government support, and loans to Sanan ST JV.

7.6.9. Investments in subsidiaries

The following table lists the Company's consolidated subsidiaries and its percentage ownership as of December 31, 2024:

Legal Seat	Name	Percentage ownership (direct or indirect)
Australia, Sydney	STMicroelectronics PTY Ltd	100
Austria, Graz	STMicroelectronics Austria GmbH	100

7.6.10. Property, plant and equipment

Property, plant and equipment consisted of the following:

In millions of U.S. dollars	As of December 31, 2024		
	Gross value	Accumulated depreciation	Net value
Land	118	—	118
Buildings	1,393	(620)	773
Lease right-of-use assets	483	(179)	304
Facilities and leasehold improvements	4,498	(3,145)	1,353
Machinery and equipment	22,264	(15,913)	6,351
Computer and R&D equipment	407	(336)	71
Other tangible assets	114	(94)	20
Construction in progress	1,899	—	1,899
Total	31,176	(20,287)	10,889

In millions of U.S. dollars	As of December 31, 2023		
	Gross value	Accumulated depreciation	Net value
Land	118	—	118
Buildings	1,311	(608)	703
Lease right-of-use assets	517	(184)	333
Facilities and leasehold improvements	4,361	(3,123)	1,238
Machinery and equipment	21,751	(15,370)	6,381

Foreign currency translation	(5)	(38)	(13)	(67)	(71)	(2)	—	(55)	(251)
Balance as of December 31, 2024	118	773	304	1,353	6,351	71	20	1,899	10,889

In 2023, the Group signed a frame agreement with the European, French and Italian authorities for a public funding program associated with the capacity expansion in some of its manufacturing facilities in France and Italy.

In the year ended December 31, 2024, capital investment funding totaled \$392 million (2023: \$709 million) and were accounted for as a reduction of the gross value of the related tangible assets. The impact of capital funding on depreciation expense for the year ended December 31, 2024 was a reduction of \$76 million (2023: \$33 million). In 2024, the Group sold owned property, plant and equipment for cash proceeds of \$5 million. In 2023, property, plant and equipment sold amounted to \$8 million.

In 2023, the Group and Sanan Optoelectronics jointly created Sanan ST JV for high-volume 200mm SiC device manufacturing in China, as described in Note 7.6.8.7. Sanan ST JV was fully consolidated as of December 31, 2024 and December 31, 2023. As of December 31, 2024, and December 31, 2023, a total amount of \$316 million and \$38 million respectively, was included on the line "Property, plant and equipment" of the consolidated statement of financial position from Sanan ST JV consolidation.

7.6.11. Leases

The Group leases land, buildings, cars and certain equipment (including IT equipment) which have remaining lease terms between less than one year and 49 years.

The consolidated statement of financial position shows the following amounts relating to leases:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Right-of-use assets		
Land	66	69
Buildings	188	206
Machinery and equipment	30	38
Computer and R&D equipment	3	4
Other	17	16
Total	304	333

Additions to the right-of-use assets during the 2024 financial year were \$59 million (2023: \$159 million). Expenses related to short-term leases were \$14 million as of December 31, 2024 (2023: \$5 million). Low-value leases were not significant in 2024 and 2023. Interest expense (included in finance cost described in Note 7.6.31) was \$12 million as of December 31, 2024 (2023: \$11 million). Cash outflows for leases totaled \$83 million for the year ended December 31, 2024 (2023: \$78 million).

Maturities of lease liabilities are as follows:

In millions of U.S. dollars	December 31, 2024
2025	79
2026	50
2027	57
2028	26
2029	21
Thereafter	111
Total future undiscounted cash outflows	344
Effect of discounting	(64)
Total lease liabilities	280
In millions of U.S. dollars	December 31, 2023
2024	76
2025	55
2026	41
2027	54
2028	24
Thereafter	137
Total future undiscounted cash outflows	387
Effect of discounting	(76)
Total lease liabilities	311

Depreciation expense in the consolidated income statement shows the following amounts relating to leases:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Depreciation expense on right-of-use assets		
Land	2	2
Buildings	52	49
Machinery and equipment	6	6
Computer and R&D equipment	6	6
Other	9	8
Total	75	71

Reported amounts related to lease arrangements are further described in Notes 7.6.10, 7.6.14 and 7.6.31.

7.6.12. Intangible assets

Intangible assets consisted of the following:

In millions of U.S. dollars	As of December 31, 2024		
	Gross value	Accumulated amortization	Net value
Purchased technologies and licenses	766	(577)	189
Purchased software	368	(293)	75
Internally developed software	116	(102)	14
Capitalized development costs	3,678	(2,508)	1,170
Intangibles in progress	68	—	68
Total	4,996	(3,480)	1,516

In millions of U.S. dollars	As of December 31, 2023		
	Gross value	Accumulated amortization	Net value
Purchased technologies and licenses	764	(547)	217
Purchased software	291	(207)	84
Internally developed software	218	(208)	10
Capitalized development costs	3,423	(2,325)	1,098
Intangibles in progress	56	—	56
Total	4,752	(3,287)	1,465

In the year ended December 31, 2024, specific project-related funding totaled \$31 million (2023: \$25 million) and were accounted for as a reduction of the gross value of related capitalized development costs.

Changes in the net carrying amount are detailed as follows:

In millions of U.S. dollars	Purchased technologies and licenses	Purchased software	Internally developed software	Capitalized development costs	Intangibles in progress	Total
Balance as of December 31, 2022	269	82	13	1,060	41	1,465
Additions	22	10	—	361	69	462
Impairment / Write-offs	(42)	—	—	(125)	—	(167)
Transfers	25	26	3	—	(54)	—
Amortization expense	(57)	(34)	(6)	(198)	—	(295)
Balance as of December 31, 2023	217	84	10	1,098	56	1,465
Additions	20	11	—	354	63	448
Impairment / Write-offs	(7)	—	—	(77)	(2)	(86)
Transfers	16	23	10	—	(49)	—
Amortization expense	(56)	(40)	(6)	(205)	—	(307)
Foreign currency translation	(1)	(3)	—	—	—	(4)
Balance as of December 31, 2024	189	75	14	1,170	68	1,516

For the year ended December 31, 2024, additions of intangible assets amounted to \$448 million (2023: \$462 million).

The 2024 amortization expense included \$235 million (2023: \$222 million) in costs of sales, \$38 million (2023: \$44 million) in R&D expenses and \$34 million (2023: \$29 million) in selling, general and administrative expenses.

Development costs capitalized on projects that are still in progress and therefore not yet amortized amounted to \$805 million as of December 2024 (2023: \$757 million).

The impairment and write-offs for 2024 amounted to \$86 million, of which, \$77 million recorded in cost of sales and \$9 million recorded in R&D expenses. Amounts reported in cost of sales correspond to write-offs of capitalized development costs related to certain projects that were cancelled. The \$9 million amount recorded in R&D expenses relates to acquired technologies with no alternative future use, primarily following the annual impairment test performed in the second half of 2024. The impairment and write-offs for 2023 amounted to \$167 million, recorded in costs of sales for \$125 million, resulting from write-offs of capitalized development costs related to certain projects that were cancelled, and in R&D expenses for \$42 million for certain technologies acquired as part of the Group's certain business combinations. The key-assumptions used for value-in-use calculations are based on the most recent budget of each CGU tested. Management determined budgeted Gross Margin based on past performance, and its expectations for the market development.

7.6.13. Goodwill

On January 10, 2024, the Group announced a new organization to deliver enhanced product development innovation and efficiency, time-to-market, as well as customer focus by end-market. This new organization implied a change in segment reporting, as described in Note 7.6.26. Existing goodwill was allocated to the Group's reportable segments, with comparative information adjusted accordingly. This new organization did not change the Group's CGUs and the way goodwill is allocated to each CGU.

Goodwill split by reportable segments and the carrying amount of goodwill is as follows:

In millions of U.S. dollars	AM&S	P&D	MCU	D&RF	Total
As of December 31, 2022	2	74	193	10	279
Foreign currency translation	—	2	4	—	6
As of December 31, 2023	2	76	197	10	285
Write-off	(1)	—	—	—	(1)
Foreign currency translation	—	(5)	(7)	—	(12)
As of December 31, 2024	1	71	190	10	272

As of December 31, 2024, the gross value of goodwill was \$317 million (2023: \$330 million) and the accumulated impairment was \$45 million (2023: \$45 million).

Goodwill is allocated to the Group's CGUs. The recoverable amount of a CGU is determined based on value-in-use calculations. These calculations use cash flow projections based on financial budgets and management's best estimates about future developments, as well as market and customer assumptions.

The Group tests whether goodwill has suffered any impairment on an annual basis during the second half of each year. In the 2024 and 2023 reporting periods, no goodwill impairment was recorded for any of the Group's CGUs. For the annual impairment test, the key-assumptions used for value-in-use calculations are based on the most recent five-year plan of each CGU tested. The average perpetuity growth rate was 1.5% (2023: 1.5%) and discount rate was from 14% (2023: 15%) pre-tax and inferred from the observable volatility of share prices for comparable companies in the semiconductor industry. These assumptions have been used, as applicable, for the analysis of each CGU within the operating segments. Management determined budgeted Gross Margin based on past performance, and its expectations for the market development. The average yearly growth rates used are consistent with the forecast included in industry reports. The discount rates used are pre-tax and reflect specific risks relating to the relevant CGUs. No reasonably possible change in key assumptions would lead to a significant impairment loss.

7.6.14. Other financial assets and financial liabilities

7.6.14.1. Other financial assets

In millions of U.S. dollars	December 31, 2024	December 31, 2023

*OCI: Other comprehensive income

Investments held in debt securities

As of December 31, 2024, the Group held \$2,452 million of U.S. Treasury debt securities. The debt securities have a rating of Aaa/AA+/AA+ from Moody's, S&P and Fitch, respectively and an average maturity of 1.4 years. The debt securities were reported as current assets on the line "Other current financial assets" on the consolidated statement of financial position as of December 31, 2024, since they represented investments of funds available for current operations.

Marketable securities totaling \$1,000 million at principal amount were transferred to financial institutions as part of short-term securities lending transactions, in compliance with corporate policies. The Group, acting as the securities lender, does not hold any collateral in this unsecured securities lending transactions. The Group retains effective control on the transferred securities.

The Group applies a forward-looking expected credit loss (ECL) approach on all debt financial assets not held at FVPL. For debt securities at FVOCI, the ECL is based on a 12-month expected credit loss basis. The 12-month ECL is the portion of lifetime ECLs that results from default events on a financial instrument that are possible within 12 months after the reporting date. The Group's quoted debt instruments at FVOCI comprise solely U.S. Treasury debt securities, which have low credit risk. Consequently, the Group has considered that the ECLs on these investments are insignificant.

Investments held in equity securities

As of December 31, 2024, the Group also had investments in quoted equity securities for an aggregate value of \$64 million, measured at FVPL (December 31, 2023: \$13 million).

As of December 31, 2024, the Group also reported other financial assets for an aggregate value of \$24 million (December 31, 2023: \$18 million).

The Group irrevocably elected to measure at FVOCI unquoted equity securities for an aggregate value of \$20 million (December 31, 2023: \$22 million). Since these are strategic investments, the Group considers this classification, which implies that changes in fair value are not subsequently recycled to earnings, to be more relevant.

The changes in fair value reported on the Group's investments held in equity securities measured at FVOCI for the years ended December 31, 2024 and December 31, 2023 were not material.

Short-term deposits

To optimize the return yield on its short-term investments, the Group invested \$1,450 million of available cash in short-term deposits as of December 31, 2024, compared to \$1,226 million as of December 31, 2023. These short-term deposits had a maturity beyond three months and no significant risk of changes in fair value. They are reported in the line "Short-term deposits" of the consolidated statement of financial position.

7.6.14.2. Other financial liabilities

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Lease financial liabilities	280	311

Currency collars	6	—
Embedded conversion option - Senior unsecured convertible bonds issued on August 4, 2020 (Tranche A)	4	229
Embedded conversion option - Senior unsecured convertible bonds issued on August 4, 2020 (Tranche B)	29	281
Total other financial liabilities (including derivatives)	417	844
Total current	189	581
Total non-current	228	263

Risk management policies relating to credit risk exposure to derivatives counterparties are further described in Note 7.6.37. Lease financial liabilities are further described in Note 7.6.11.

7.6.14.3. Interest-bearing loans and borrowings

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Funding program loans from European Investment Bank ("EIB"):		
3.62% due 2028, floating interest rate at Euribor + 0.589%	106	141
4.19% due 2029, floating interest rate at Euribor + 0.564%	127	162
3.96% due 2031, floating interest rate at Euribor + 0.473%	244	296
4.23% due 2031, floating interest rate at Euribor + 0.550%	120	146
3.21% due 2033, floating interest rate at Euribor + 0.558%	281	332
6.19% due 2034, floating interest rate at Secured Overnight Financing Rate +0.939%	300	—
Credit Facility from Cassa Depositi e Prestiti SpA ("CDP SpA")		
3.34% due 2027, floating interest rate at Euribor + 0.690%	65	97
3.91% due 2028, floating interest rate at Euribor + 0.550%	69	92
4.21% due 2029, floating interest rate at Euribor + 0.850%	74	95
Dual tranche senior unsecured convertible bonds		
Zero-coupon, due 2025 (Tranche A)	742	730
Zero-coupon, due 2027 (Tranche B)	715	702
Other Funding program loans:		
0.26% (weighted average), due 2025-2028, fixed interest rate	5	6
Total interest-bearing loans and borrowings	2,848	2,799
Total current	1,683	1,640
Total non-current	1,165	1,159

Interest-bearing loans and borrowings are denominated in the following currencies:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
U.S. Dollar	1,757	1,432
Euro	1,091	1,367
Total	2,848	2,799

The EIB Loans denominated in Euros, but drawn in U.S. dollars, are classified as U.S. dollar denominated debt.

Aggregate contractual maturities of interest-bearing loans and borrowings outstanding, excluding repayments of coupons and interests, are as follows:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
2024	—	207
2025	975	957
2026	224	207
2027	962	942
2028	197	178
2029	154	131
Thereafter	379	245
Total	2,891	2,867

The difference between the total aggregated future maturities in the preceding table and the total carrying amount of interest-bearing loans and borrowings is due to unamortized debt discount and issuance costs on the dual tranche senior unsecured convertible bonds.

Senior convertible bonds

On August 4, 2020, the Company issued \$1,500 million in principal amount of dual tranche senior unsecured convertible bonds (Tranche A for \$750 million and Tranche B for \$750 million), due 2025 and 2027, respectively. Tranche A bonds were issued at 105.8% as zero-coupon bonds while Tranche B bonds were issued at 104.5% as zero-coupon bonds. The conversion price at issuance was \$43.62 for Tranche A, equivalent to a 47.5% conversion premium and \$45.10 for Tranche B, equivalent to a 52.5% conversion premium. These conversion features correspond to an equivalent of 4,585 shares per each Tranche A bond \$200,000 par value and an equivalent of 4,435 shares per each Tranche B bond \$200,000 par value. The bonds are convertible by the bondholders or are callable by the issuer upon certain conditions, on a net-share settlement basis, except if the issuer elects a full-cash or full-share conversion as an alternative settlement. The net proceeds from the bond offering were \$1,567 million, after deducting issuance costs paid by the Group.

The issuer's call option and the holder's conversion option have been identified as embedded non-equity derivative instruments, resulting in the recognition of the options separately from the debt host contract. Upon initial recognition, the derivatives were measured at fair value based on the income approach, the debt being determined as a residual amount of the \$1.5 billion total proceeds. The value of the issuer's call option was deemed to be nil at initial recognition. The value of the holder's conversion option was estimated at \$219 million at issuance date, which determined the initial recognition of the liability component at \$1,358 million before allocation of issuance costs. The fair value measurement of the embedded derivative instruments corresponded to a Level 3 fair value hierarchy measurement, which is further described in Note 7.6.14.5. The Group elected to allocate issuance costs, totaling \$10 million, to the debt component. The debt was subsequently measured at amortized cost using the effective interest method.

Starting August 2023 and August 2024 for Tranche A and Tranche B convertible bonds, respectively, the bondholders have full conversion rights. Consequently, for both tranches, non-equity embedded derivative instruments and liability component were reported on the line Other current financial assets for an amount of \$2 million, on the line Other current financial liabilities for an amount of \$33 million and on the line Interest-bearing loans and borrowings – current portion for an amount of \$1,457 million, respectively, of the consolidated statement of financial position as of December 31, 2024.

Reconciliation of liabilities arising from financing activities

The reconciliation for the year ended December 31, 2024 is as follows:

In millions of U.S. dollars	Interest-bearing loans and borrowings	Other non-current financial liabilities*	Interest-bearing loans and borrowings – current portion	Other current financial liabilities**	Total
December 31, 2023	1,159	243	1,640	578	3,620
Cash flows	300	—	(203)	(83)	14
Non-cash changes:					
New leases	—	25	—	31	56
Accreted finance costs	—	—	25	—	25
Fair value changes	—	—	—	(477)	(477)
Reclassification	(264)	(46)	264	58	12

December 31, 2024	1,165	213	1,683	100	3,161

* "Other non-current financial liabilities" reported above do not include deferred and contingent consideration, as they relate to business acquisitions.

** "Other current financial liabilities" reported above correspond to the current portion of the lease liability for an amount of \$70 million and Tranche A and Tranche B bondholder's conversion option for an amount \$33 million as of December 31, 2024. Derivatives are not reported in the above table as they relate to operating activities. Lease financial liabilities are further described in Note 7.6.11 and convertible bonds are further described in Note 7.6.14.3.

The reconciliation for the year ended December 31, 2023 is as follows:

In millions of U.S. dollars	Interest-bearing loans and borrowings	Other non-current financial liabilities*	Interest-bearing loans and borrowings – current portion	Other current financial liabilities**	Total
December 31, 2022	1,687	342	885	169	3,083
Cash flows	329	—	(169)	(78)	82
Non-cash changes:					
New leases	—	87	35	35	157
Accreted finance costs	—	—	25	—	25
Fair value changes	—	130	—	119	249
Reclassification	(858)	(320)	858	331	11
Foreign currency translation	1	4	6	2	13
December 31, 2023	1,159	243	1,640	578	3,620

* "Other non-current financial liabilities" and "Other current financial liabilities" reported above do not include deferred and contingent consideration, as they relate to business acquisitions.

** "Other current financial liabilities" reported above correspond to the current portion of the lease liability for an amount of \$68 million and Tranche A and Tranche B on bondholder's conversion option for an amount \$510 million as of December 31, 2023. Derivatives are not reported in the above table as they relate to operating activities. Lease financial liabilities are further described in Note 7.6.11 and convertible bonds are further described in Note 7.6.14.3

The Group's long-term debt contained standard conditions but does not impose minimum financial ratios. The Group had unutilized committed medium-term credit facilities with core relationship banks totaling \$634 million as of December 31, 2024.

As of December 31, 2024 the Group also had three long-term amortizing credit facilities with EIB as part of R&D funding programs and two long-term facilities with CDP SpA.

EIB facilities

The first credit facility, signed in August 2017, is a €500 million loan, in relation to R&D and capital expenditures in the EU, fully drawn in Euros, of which \$233 million was outstanding as of December 31, 2024 (December 31, 2023: \$303 million). The second one, signed in 2020, is a €500 million credit facility agreement to support R&D and capital expenditure programs in Italy and France. It was fully drawn in Euros in 2021, representing \$364 million outstanding as of December 31, 2024 (December 31, 2023: \$442 million). In 2022, the Group signed a third long-term amortizing credit facility with EIB of €600 million. Of this amount, €300 million was withdrawn in Euros in 2022, and \$300 million was withdrawn in U.S dollars during 2024, representing and outstanding balance of \$581 million as of December 31, 2024 (December 31, 2023: \$332 million).

CDP SpA facilities

The first credit facility, signed in 2021, is a €150 million loan, fully drawn in Euros, of which \$65 million were outstanding as of December 31, 2024 (December 31, 2023: \$97 million). The second one, signed in 2022, is a €200 million loan, fully drawn in Euros, of which \$143 million was outstanding as of December 31, 2024 (December 31, 2023: \$187 million).

As of December 31, 2023 the Group had three long-term amortizing credit facilities with the EIB as part of R&D funding programs and two long-term facility with CDP SpA.

7.6.14.4. Hedging activities and derivatives

Derivative instruments not designated as hedge

The Group conducts its business on a global basis in various major international currencies. As a result, the Group is exposed to adverse movements in foreign currency exchange rates, primarily with respect to the Euro. Foreign exchange risk mainly arises from future commercial transactions and recognized assets and liabilities at the Group's subsidiaries. The Group enters into currency forward contracts to reduce its exposure to changes in exchange rates and the associated risk arising from the denomination of certain assets and liabilities in foreign currencies at the Group's subsidiaries. These instruments do not qualify as hedging instruments and are marked-to-market at each period-end with the associated changes in fair value recognized in "Other income" or "Other expenses" of the consolidated income statement.

To reduce its exposure to U.S. dollar exchange rate fluctuations, the Group also hedges certain Euro-denominated forecasted transactions that cover at reporting date a large part of its R&D and SG&A expenses through the use of currency forward contracts and currency options, including collars. These instruments do not qualify as hedging instruments and are marked-to-market at each period-end with the associated changes in fair value recognized in "Other income" or "Other expenses" of the consolidated income statement.

The notional amount of these financial instruments amounted to \$2,337 million in 2024 (2023: \$1,731 million). The principal currencies covered at the end of the year 2024 are the Euro, the China Yuan Renminbi, the Singapore dollar, the Swiss franc, the Japanese yen, the Indian rupee, the Moroccan dirham, the Malaysian ringgit, the British pound, the Philippines peso, the Taiwan dollar, the South Korean won, the Swedish krona, the Australian dollar and the Hong Kong dollar.

Foreign currency forward contracts and currency options, including collars, not designated as cash flow hedge outstanding as of December 31, 2024 had remaining terms of 2 days to 20 months, maturing on average after 95 days.

Foreign currency forward contracts and currency options, including collars, not designated as cash flow hedge outstanding as of December 31, 2023 had remaining terms of 3 days to 12 months, maturing on average after 79 days.

Derivative instruments designated as cash flow hedge

To reduce its exposure to U.S. dollar exchange rate fluctuations, the Group hedges certain Euro-denominated forecasted transactions that cover at reporting date a portion of its front-end manufacturing costs of semi-finished goods through the use of currency forward contracts and currency options, including collars. The Group also hedges certain manufacturing transactions denominated in Singapore dollars.

The principles regulating the hedging strategy for derivatives designated as cash flow hedge is to hedge up to 70% of the total forecasted transactions of the following quarter for these manufacturing costs. In order to follow a dynamic hedge strategy, the Group may change the percentage of the designated hedged item within the limit of 100% of the forecasted transaction. The maximum length of time over which the Group could hedge its exposure to the variability of cash flows for forecasted transactions is 24 months.

These derivative instruments are designated and qualified as cash flow hedges. Hedge effectiveness is determined at the inception of the hedge relationship, and through periodic prospective effectiveness assessments to ensure that an economic relationship exists between the hedged item and the hedging instrument. The Group enters into hedge relationships where the critical terms of the hedging instrument match with the terms of the hedged item, which ensures a 1:1 hedge ratio on a monthly basis. The Group therefore performs a qualitative assessment of effectiveness. If changes in circumstances affect the terms of the hedged item such that the critical terms no longer match with the critical terms of the hedging instrument, the Group uses the hypothetical derivative method to assess effectiveness. Ineffectiveness

may arise if the timing of the forecast transaction changes from what was originally estimated, which cannot occur as the Group designates as hedged items forecasted intercompany transactions denominated in foreign currency over which the Group has full oversight, control, and visibility. Ineffectiveness may arise only if there are changes in the credit risk of the counterparty.

The derivative instruments designated as cash flow hedges are reflected at fair value in the consolidated statement of financial position. The unrealized gain or loss from the effective portion of the hedge is reported in other comprehensive income and is reclassified into earnings in the same period in which the hedged transaction affects earnings, and within the same consolidated income statement line item as the impact of the hedged transaction.

For the year ended December 31, 2024, the Group recorded a decrease in cost of sales of \$13 million (2023: decrease of \$1 million) related to the realized gain incurred on such hedged transactions. No significant ineffective portion of the hedge was recorded on the lines "Other income" or "Other expenses" for the years ended December 31, 2024 and 2023.

The notional amount of foreign currency forward contracts and currency options, including collars, designated as cash flow hedge amounted to \$1,624 million (2023: \$1,924 million). The forecasted transactions hedged as of December 31, 2024 were determined to be highly probable of occurring.

As of December 31, 2024, the amount of net deferred losses on derivative instruments included in the cash flow hedge reserve in equity was \$56 million (2023: net deferred gains of \$38 million), of which \$54 million were expected to be reclassified as earnings during the next 12 months based on the monthly forecasted semi-finished manufacturing costs.

Foreign currency forward contracts and currency options, including collars, designated as cash flow hedge outstanding as of December 31, 2024, had remaining terms of 6 days to 19 months, maturing on average after 162 days.

Foreign currency forward contracts and currency options, including collars, designated as cash flow hedge outstanding as of December 31, 2023, had remaining terms of 4 days to 12 months, maturing on average after 111 days.

As of December 31, 2024, the Group had the following outstanding derivative instruments that were entered into to hedge Euro-denominated and Singapore-Dollar-denominated forecasted transactions:

	Notional amount for hedge on forecasted manufacturing costs transactions	
	In millions of Euros	In millions of Singapore Dollars
Forward contracts	1,063	168
Currency collars	380	—

As of December 31, 2023, the Group had the following outstanding derivative instruments that were entered into to hedge Euro-denominated and Singapore-Dollar-denominated forecasted transactions:

	Notional amount for hedge on forecasted manufacturing costs transactions	
	In millions of Euros	In millions of Singapore Dollars
Forward contracts	951	219
Currency collars	640	—

Cash flow and fair value interest rate risk

The Group's interest rate risk arises from long-term borrowings. Borrowings issued at variable rates expose the Group to cash flow interest rate risk. Borrowings issued at fixed rates expose the Group to fair value interest rate risk.

The Group analyzes its interest rate exposure on a dynamic basis. Various scenarios are simulated taking into consideration refinancing, renewal of existing positions, alternative financing and hedging. The Group invests primarily on a short-term basis and as such its liquidity is invested in floating interest rate instruments. As a consequence, the Group is exposed to interest rate risk due to potential mismatch between the return on its short-term floating interest rate investments and the portion of its long-term debt issued at fixed rate.

Other market risk

As part of its ongoing investing activities, the Group may invest in publicly traded equity securities and be exposed to equity security price. In order to hedge the exposure to this market risk, the Group may enter into certain derivative hedging transactions.

Credit risk and the Group's impairment policies on financial assets are further described in Note 7.6.7.13 and Note 7.6.37.

Offsetting financial assets and financial liabilities

The Group entered into currency collars as combinations of two options, which are reported, for accounting purposes, on a net basis. As of December 31, 2024, the fair value of these collars represented liabilities for a net amount of \$15 million (composed of \$16 million liability offset with a \$1 million asset). In addition, the Group entered into other derivative instruments, primarily forward contracts, which are governed by standard International Swaps and Derivatives Association agreements and are compliant with Protocols of the European Market Infrastructure Regulation and the ISDA 2018 U.S. Resolution Stay Protocol, which are not offset in the statement of financial position and representing total assets of \$10 million and liabilities of \$74 million as of December 31, 2024.

Risk management policies relating to credit risk exposure to derivatives counterparties is further described in Note 7.6.37.

7.6.14.5. Fair values

Set out below is a comparison by class of the carrying amounts and fair value of the Group's financial instruments that are carried in the consolidated financial statements.

In millions of U.S. dollars	Carrying amount		Fair value	
	December 31, 2024	December 31, 2023	December 31, 2024	December 31, 2023
Financial assets				
Short-term deposits	1,450	1,226	1,450	1,226
Trade accounts receivable	1,749	1,731	1,749	1,731
Other receivables and assets	997	1,237	997	1,237
Quoted financial instruments	2,540	1,666	2,540	1,666
Unquoted equity securities	20	22	20	22
Embedded call option - Senior unsecured convertible bonds issued on August 4, 2020 (Tranche A)	—	14	—	14
Embedded call option - Senior unsecured convertible bonds issued on August 4, 2020 (Tranche B)	2	34	2	34
Derivative financial assets	10	59	10	59
Cash equivalents ⁽¹⁾	1,611	2,879	1,611	2,879
Financial liabilities				
Interest-bearing loans and borrowings (excluding senior unsecured convertible bonds)	1,391	1,367	1,391	1,367
Senior unsecured convertible bonds issued on August 4, 2020 ⁽²⁾	1,457	1,432	1,442	1,814
Embedded conversion option - Senior unsecured convertible bonds issued on August 4, 2020 (Tranche A) ⁽²⁾	4	229	4	229
Embedded conversion option - Senior unsecured convertible bonds issued on August 4, 2020 (Tranche B) ⁽²⁾	29	281	29	281
Finance leases	280	311	280	311
Contingent consideration on business acquisitions	15	20	15	20
Trade accounts payable	1,323	1,856	1,323	1,856
Other payables and accrued liabilities	420	552	420	552
Derivative financial liabilities	89	3	89	3

(1) Cash equivalents primarily correspond to deposits at call with banks and money market funds.

(2) The carrying amount of the senior unsecured convertible bonds issued on August 4, 2020 and outstanding as of December 31, 2024 and December 31, 2023 corresponds to the liability component only, since, at initial recognition, an amount of \$219 million was separately recognized as embedded derivative financial instruments. The fair value of the senior convertible bonds includes the fair value of all embedded derivatives.

The fair value of financial assets and liabilities are included at the price at which the instrument could be sold in an orderly transaction between market participants at the measurement date. The following methods and assumptions were used to estimate fair value:

- for trade accounts receivable, cash equivalents, short-term deposits, trade accounts payable, other payables and accrued liabilities, the carrying amounts reflected in the consolidated financial statements are reasonable estimates of fair value due to the relatively short period of time between the origination of the instruments and their expected realization.
- other receivables and assets approximate their carrying amounts due either to their short-term maturities or to the fact that they are recorded at their net present value.
- financial investments (debt and equity securities):
 - the fair value of quoted debt and equity securities is determined based upon quoted market prices for identical instruments;
 - the fair value of unquoted equity securities is based on the valuation of the underlying instruments on a new round of third-party financing or upon liquidation;
- the fair value of interest-bearing loans and borrowings, including lease liabilities but excluding senior unsecured convertible bonds, is determined by estimating future cash flows on a borrowing-by-borrowing basis and discounting these future cash flows using the Group's incremental borrowing rates for similar types of arrangements;
- the senior unsecured convertible bonds issued on August 4, 2020, and outstanding as of December 31, 2024, and December 31, 2023, have been trading on the open market segment on the Frankfurt Stock Exchange since issuance. The fair value of these instruments is the observable price of the bonds on that market;
- the fair value of derivative instruments is determined based upon quoted market prices for similar instruments; and
- the bondholders' conversion option and the issuer's soft call embedded in the senior unsecured convertible bonds are measured at fair value based on the income approach using Bloomberg's option pricing model, which can be assimilated to a Black & Scholes model for pricing stock options. This model has been elected as the best indication of fair value since it maximizes the use of observable market-based inputs.

Fair value hierarchy

The Group uses the following hierarchy for determining and disclosing the fair value of financial instruments by valuation technique:

- level 1: quoted (unadjusted) prices in active markets for identical assets or liabilities.
- level 2: other techniques for which all inputs which have a significant effect on the recorded fair value are observable, either directly or indirectly.
- level 3: techniques which use inputs which have a significant effect on the recorded fair value that are not based on observable market data.

For assets and liabilities that are recognized in the financial statements at fair value on a recurring basis, the Group determines whether transfers have occurred between levels in the hierarchy by re-assessing categorization (based on the lowest level input that is significant to the fair value measurement as a whole) at the end of each reporting period.

As of December 31, 2024, the Group held the following assets and liabilities measured at fair value:

In millions of U.S. dollars	December 31, 2024	Level 1	Level 2	Level 3
Assets measured at fair value				
Financial assets at FVPL				
Foreign exchange forward contracts	10	—	10	—
Currency collars	—	—	—	—
Quoted equity securities at FVPL	64	64	—	—
Other financial assets at FVPL	24	24	—	—
Embedded call options	2	—	—	2
Quoted debt securities measured at FVOCI				
Government bonds issued by the U.S. Treasury	2,452	2,452	—	—
Unquoted equity securities measured at FVOCI	20	—	—	20
Total assets	2,572	2,540	10	22
Liabilities measured at fair value				
Derivative instruments				
Foreign exchange forward contracts	29	—	29	—
Currency collars	6	—	6	—
Cash flow hedges				
Foreign exchange forward contracts	45	—	45	—
Currency collars	9	—	9	—
Embedded conversion options	33	—	—	33
Contingent consideration on business acquisitions	15	—	—	15
Total liabilities	137	—	89	48

During the reporting period ending December 31, 2024, there was no transfer between Level 1 and Level 2 fair value measurements, and no transfer into and out of Level 3 fair value measurements.

As of December 31, 2023, the Group held the following assets and liabilities measured at fair value:

In millions of U.S. dollars	December 31, 2023	Level 1	Level 2	Level 3
Assets measured at fair value				
Financial assets at FVPL				
Foreign exchange forward contracts	19	—	19	—
Currency collars	2	—	2	—
Quoted equity securities at FVPL	13	13	—	—
Other financial assets at FVPL	18	18	—	—
Embedded call options	48	—	—	48
Cash flow hedges				
Foreign exchange forward contracts	33	—	33	—
Currency collars	5	—	5	—
Quoted debt securities measured at FVOCI				
Government bonds issued by the U.S. Treasury	1,635	1,635	—	—
Unquoted equity securities measured at FVOCI	22	—	—	22
Total assets	1,795	1,666	59	70
Liabilities measured at fair value				
Derivative instruments				
Foreign exchange forward contracts	2	—	2	—
Currency collars	—	—	—	—
Cash flow hedges				
Foreign exchange forward contracts	1	—	1	—
Currency collars	—	—	—	—
Embedded conversion options	510	—	—	510
Contingent consideration on business acquisitions	20	—	—	20
Total liabilities	533	—	3	530

During the reporting period ending December 31, 2023, there was no transfer between Level 1 and Level 2 fair value measurements, and no transfer into and out of Level 3 fair value measurements.

Financial instruments in Level 1

The fair value of financial instruments traded in active markets is based on quoted market prices at the balance sheet date. A market is regarded as active if quoted prices are readily and regularly available from an exchange, dealer, broker, industry group, pricing service or regulatory agency, and those prices represent actual and regularly occurring market transactions on an arm's length basis. The quoted market price used for financial assets held by the Group is the current bid price. These instruments are included in Level 1.

Financial instruments in Level 2

The fair value of financial instruments that are not traded in active markets (for example over the counter derivatives) is determined by using valuation techniques. These valuation techniques maximize the use of observable market data when available and rely as little as possible on entity's specific estimates. If all significant inputs required to fair value an instrument are observable, the instrument is included in Level 2. If one or more of the significant inputs is not based on observable market data, the instrument is included in Level 3. Specific valuation techniques used to value financial instruments include:

- Quoted market prices or dealer's quotes for similar instruments; and
- The fair value of foreign exchange forward contracts when determined using forward exchange rates at the balance sheet date, with the resulting value discounted back to present value.

Financial instruments in Level 3

For financial assets measured at fair value using significant unobservable inputs (Level 3), the reconciliation between January 1, 2024 and December 31, 2024 is presented as follows:

In millions of U.S. dollars	Fair value measurements using significant unobservable inputs (Level 3)
As of January 1, 2024	70
Change in fair value of the embedded call option of the senior unsecured convertible bonds issued on August 4, 2020 (Tranche A and Tranche B)	(46)
Change in fair value of unquoted equity securities measured at FVOCI	(2)
As of December 31, 2024	22
Amount of net loss included in the 2024 income statement attributable to assets still held at the reporting date	(46)

For financial liabilities measured at fair value using significant unobservable inputs (Level 3), the reconciliation between January 1, 2024 and December 31, 2024 is presented as follows:

In millions of U.S. dollars	Fair value measurements using significant unobservable inputs (Level 3)
As of January 1, 2024	(530)
Change in fair value of the embedded conversion option of the senior unsecured convertible bonds issued on August 4, 2020 (Tranche A and Tranche B)	477
Payments made in connection with business acquisitions	5
As of December 31, 2024	(48)
Amount of net gain included in the 2024 income statement attributable to assets still held at the reporting date	477

The following table shows the impact on the income statement of the valuation of the embedded derivative instruments outstanding as of December 31, 2024:

In millions of U.S. dollars	
Asset (liability) value as of December 31, 2023	(462)
Gains (losses) recognized in the consolidated income statement	431
Asset (liability) value as of December 31, 2024	(31)

Contingent consideration reported as liabilities on the consolidated statement of financial position as of December 31, 2024 and December 31, 2023 is based on the probability that the milestones defining the variable components of the consideration will be achieved.

The change in fair value amounting to \$477 million on the embedded bondholders' conversion options was reported as "Finance income" in the consolidated income statement ended December 31, 2024. The change in fair value amounting to \$46 million on the embedded issuer's call options was reported as "Finance loss" in the consolidated income statement ended December 31, 2024.

The model used to price the derivative instruments embedded in the senior unsecured convertible bonds issued on August 4, 2020 (Tranche A and Tranche B) included the following inputs:

- the risk-free interest rate for comparable maturities;
- the reference price for the Company's ordinary shares as traded on the New York Stock Exchange;
- the exercise price;
- the dividend expected to be paid on the Company's ordinary shares over the life of the option;
- the volatility of the Company's ordinary shares; and
- the duration of the option.

Sensitivity to the share price variations is further described in Note 7.6.37. Implied volatility should be considered an unobservable input due to the lack of market data (stock exchange listing of the bond option) for a time horizon equal to the duration of the option. The figure is, therefore, an assumption based on the volatility implied by the price of the financial instrument, as negotiated at the issue stage, and market volatility for the nearest time horizon.

The prices of the bondholders' conversion options are sensitive to implied volatility. The table below shows a sensitivity analysis of the net carrying amount of the embedded conversion options in relation to a series of changes expressed in percentage point terms of volatility.

Change in volatility of the Company's ordinary shares	-10 p.p.	- 8 p.p.	-5 p.p.	+5 p.p.	+8 p.p.	+10 p.p.
Change in the net carrying amount of the bondholders' conversion options	(22)	(18)	(12)	14	23	29
Net carrying amount of the embedded conversion options	11	15	21	47	56	62

For financial assets measured at fair value using significant unobservable inputs (Level 3), the reconciliation between January 1, 2023 and December 31, 2023 is presented as follows:

In millions of U.S. dollars	Fair value measurements using significant unobservable inputs (Level 3)
As of January 1, 2023	43
Change in fair value of the embedded call option of the senior unsecured convertible bonds issued on August 4, 2020 (Tranche A and Tranche B)	15
Currency translation adjustment	2
Purchase of equity instruments	10
As of December 31, 2023	70
Amount of net gains included in the 2023 income statement attributable to assets still held at the reporting date	17

For financial liabilities measured at fair value using significant unobservable inputs (Level 3), the reconciliation between January 1, 2023 and December 31, 2023 is presented as follows:

In millions of U.S. dollars	Fair value measurements using significant unobservable inputs (Level 3)
As of January 1, 2023	(292)
Change in fair value of the embedded conversion option of the senior unsecured convertible bonds issued on August 4, 2020 (Tranche A and Tranche B)	(249)
Change in fair value of the contingent consideration on business acquisitions	12
Currency translation adjustment	(1)
As of December 31, 2023	(530)
Amount of net losses included in the 2023 income statement attributable to liabilities still held at the reporting date	(238)

The following table shows the impact on the income statement of the valuation of the embedded derivative instruments outstanding as of December 31, 2023:

In millions of U.S. dollars	
Asset (liability) value as of December 31, 2022	(228)
Gains (losses) recognized in the consolidated income statement	(234)
Asset (liability) value as of December 31, 2023	(462)

The change in fair value amounting to \$249 million on the embedded bondholders' conversion option was reported as "Finance costs" in the consolidated income statement ended December 31, 2023. The change in fair value amounting to \$15 million on the embedded issuer's call option was reported as "Finance income" in the consolidated income statement ended December 31, 2023.

The table below shows a sensitivity analysis as of December 31, 2023 of the net carrying amount of the embedded conversion options in relation to a series of changes expressed in percentage point terms of volatility.

Change in volatility of the Company's ordinary shares	-10 p.p.	- 8 p.p.	-5 p.p.	+5 p.p.	+8 p.p.	+10 p.p.
Change in the net carrying amount of the bondholders' conversion options	(83)	(67)	(42)	43	68	85
Net carrying amount of the embedded conversion options	427	443	468	553	578	595

7.6.15. Other non-current assets

Other non-current assets consisted of the following:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Public funding receivables	375	210
Taxes and other receivables from government agencies	26	22
French research tax credit receivable	231	246
Prepayments and deposits to third parties	213	224
Other non-current assets	60	58
Total	905	760

The Group holds long-term receivables with the objective to collect the contractual cash flows and therefore, these receivables are measured subsequently at amortized cost using the effective interest method.

In 2024, the Group signed a new public funding scheme for research, development, innovation and first industrial deployment activities.

In 2024 and 2023, the Group entered into factoring transactions to accelerate the realization in cash of certain long-term receivables. The Group sold without recourse \$87 million and \$118 million of these receivables in the years ended December 31, 2024 and 2023 respectively, with a financial cost of \$4 million and \$5 million respectively.

Prepayments and deposits to third parties relate to long-term supply agreements involving purchase of raw materials, capacity commitments, cloud-hosting arrangements, and other services.

The major portion of other long-term receivables to which the expected credit loss model applies are long-term State receivables. Due to the existing history of zero-default on receivables originated by governments, the expected credit loss is assumed to be negligible as of December 31, 2024, and 2023. Other non-current assets presented in the table above on the line "Other non-current assets" are composed of individually not significant amounts not deemed to have exposure of default. Consequently, no significant expected credit loss allowance was reported on other non-current assets at reporting date.

The carrying amounts of the Group's non-current assets are denominated in the following currencies:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
U.S. dollars	207	187
Euro	691	570
Japanese Yen	2	2
Other currencies	5	1
Total	905	760

7.6.16. Inventories

Inventories consisted of the following:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Raw materials	348	298
Work-in-process	1,696	1,743
Finished products	762	655
Total	2,806	2,696

Write-offs of inventories were recognized in cost of sales as an expense and amounted to \$92 million in 2024 (2023: \$93 million). Further impact related to inventories on the consolidated income statement is provided in Note 7.6.27.

The carrying amount of inventories is presented net of a reserve for obsolescence items of \$167 million as of December 31, 2024 (2023: \$145 million).

7.6.17. Trade accounts receivable

Trade accounts receivable consisted of the following:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Trade accounts receivable	1,768	1,750
Loss allowance	(19)	(19)
Total	1,749	1,731

Trade receivables are amounts due from customers for goods sold or services performed in the ordinary course of business. Trade receivables are non-interest bearing with credit from 30 up to 90 days. They are all classified as current. The Group holds the trade receivables with the objective to collect the contractual cash flows and, therefore, trade receivables are measured subsequently at amortized cost. The Group does not expect to have any significant contracts where the period between the transfer of the promised goods or services to the customer and payment by the customer exceeds one year. As a consequence, the Group does not adjust any of the transaction prices for the time value of money and no significant transaction with customers includes significant financing component. Due to the short-term nature of trade receivables, their carrying amount is considered to be the same as their fair value.

As described in Note 7.6.37, the Group monitors the creditworthiness of its customers to which it grants credit terms in the normal course of business. If certain customers are independently rated, these ratings are used. Otherwise, if there is no independent rating, risk control assesses the credit quality of the customer, considering its financial position, past experience and other factors. Individual risk limits are set based on internal and external ratings in accordance with limits set by management. The utilization of credit limits is regularly monitored. Sales to customers are primarily settled in cash.

The Group uses a lifetime expected loss allowance for all trade receivables based on failure rates, as applied to the gross amounts of trade accounts receivable. The model includes reasonable assumptions about future credit trends. The historical loss rates are adjusted to reflect current and forward-looking information on macro-economic factors affecting the ability of the Group's customers to settle the receivables. In addition to the factors already embedded in the failure rates, as applied on trade accounts receivable, the Group has identified cyclicity and uncertainties around continued growth for the semiconductor industry and its SAM to be the most relevant factors. These macro-economic factors are weighted into different economic scenarios, in line with estimates and methodologies applied by other business entities, including financial institutions. These scenarios range from upside scenario (above-

trend economic growth) to severe downside (recession). On that basis, the loss allowance as of December 31, 2024 and December 31, 2023 was determined as follows:

In millions of U.S. dollars	Total	No past-due	Past due		
			Less than a month	Between 1 and 6 months	Over 6 months
December 31, 2024					
Expected loss rate		1 %	1 %	10 %	100 %
Trade receivables – Gross carrying amount	1,768	1,690	73	4	1
Loss allowance	(19)	(17)	(1)	—	(1)
Trade receivables – Net carrying amount	1,749	1,673	72	4	—
December 31, 2023					
Expected loss rate		1 %	1 %	10 %	100 %
Trade receivables – Gross carrying amount	1,750	1,644	88	18	—
Loss allowance	(19)	(16)	(1)	(2)	—
Trade receivables – Net carrying amount	1,731	1,628	87	16	—

The loss allowance for trade accounts receivable as of December 31, 2024 and December 31, 2023 reconcile to the opening loss allowance as follows:

In millions of U.S. dollars	
As of December 31, 2022	21
Additions	—
Reversals	(2)
As of December 31, 2023	19
Additions	1
Reversals	(1)
As of December 31, 2024	19

Trade accounts receivable are denominated in the following currencies:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
U.S. dollars	1,622	1,563
Euro	43	53
Japanese Yen	103	134
Total	1,768	1,750

The maximum exposure to credit risk was the fair value of trade accounts receivable, net of expected credit losses as of December 31, 2024 and December 31, 2023.

7.6.18. Other receivables and assets

Other receivables and assets consisted of the following:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Public funding receivables	391	651
Advances and deferred charges	210	180
Taxes and other government receivables	254	241
Loans and deposits	14	10
Interest receivable	29	27
Other current assets	99	128
Total	997	1,237

Public funding receivables relate to R&D contracts, industrialization contracts and capital investment projects.

Taxes and other government receivables include receivables related to value-added tax, primarily in European tax jurisdictions.

Advances and deferred charges include prepaid amounts associated with multi-annual supply and service agreements.

The Group applies a forward-looking expected credit losses model on all financial assets measured at amortized cost, excluding trade accounts receivable. The major portion of other receivables and assets to which this expected credit loss model applies corresponds to governmental receivables. Due to the short maturity of these receivables and the existing history of zero-default on receivables originated by governments, the expected credit loss is assumed to be negligible as of December 31, 2024, and December 31, 2023. Other receivables, excluding receivables from government agencies, are composed of individually insignificant amounts at exposure of default. Consequently, no significant loss allowance was reported on other receivables and assets as of December 31, 2024 and December 31, 2023.

The carrying amounts of the Group's other receivables and assets are denominated in the following currencies:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
U.S. dollars	302	270
Euro	663	924
Other currencies	32	43
Total	997	1,237

The maximum exposure to credit risk was the fair value of other receivables and assets, net of expected credit losses, as of December 31, 2024 and December 31, 2023.

7.6.19. Cash and cash equivalents

Cash and cash equivalents consisted of the following:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Cash at bank and on hand	671	343
Deposits at call with banks and money market funds	1,611	2,879
Total	2,282	3,222

7.6.20. Equity

7.6.20.1. Outstanding shares

The authorized share capital of the Company is €1,810 million consisting of 1,200,000,000 common shares and 540,000,000 preference shares, each with a nominal value of €1.04. As of December 31, 2024, the number of common shares issued was 911,281,920 shares (December 31, 2023: 911,281,920 shares).

As of December 31, 2024, the number of common shares outstanding was 898,175,408 shares (December 31, 2023: 902,771,081 shares).

7.6.20.2. Preference shares

The 540,000,000 preference shares, when issued, will entitle a holder to full voting rights and to a preferential right to dividends and distributions upon liquidation.

The Company is a party to an option agreement regarding the preference shares with the Stichting, entered into on January 22, 2007, with a duration of ten years, which agreement was extended for additional ten years in October 2016. The Managing Board and the Supervisory Board, along with the board of the Stichting, have declared that they are jointly of the opinion that the Stichting is independent of the Company. The option agreement provides for the issuance of up to a maximum 540,000,000 preference shares. Any such shares would be issued to the Stichting upon its request and in its sole discretion and upon payment of at least 25% of the par value of the preference shares to be issued. The shares would be issuable in the event of actions which the board of the Stichting determines would be contrary to the Company's interests, shareholders and other stakeholders and which, in the event of a creeping acquisition or offer for the Company's common shares, are not supported by the Company's Managing Board and Supervisory Board. The preference shares may remain outstanding for no longer than two years. The effect of the preference shares may be to deter potential acquirers from effecting an unsolicited acquisition resulting in a change of control as well as to create a level-playing field in the event actions which are considered to be hostile by the Managing Board and the Supervisory Board, as described above, occur and which the board of the Stichting determines to be contrary to the Company's interests, shareholders and other stakeholders.

There were no preference shares issued as of December 31, 2024 and December 31, 2023.

7.6.20.3. Treasury shares

As of December 31, 2024, the Company owned 13,106,512 shares classified as treasury stock in the consolidated statement of equity compared to 8,510,839 shares as of December 31, 2023.

The treasury shares have been originally designated for allocation under the Company's share-based remuneration programs. As of December 31, 2024, 86,565,271 of these treasury shares were transferred to employees under the Company's share-based remuneration programs, of which 5,542,756 shares in the year ended December 31, 2024 and 6,502,300 shares during the year ended December 31, 2023.

On July 1, 2021, the Company announced the launch of a share buy-back program of up to \$1,040 million to be executed within a three-years period. Under this share buy-back program, the Company purchased approximately 4.1 million shares of its outstanding common stock for a total of \$175 million during the first half of 2024, from January until the program concluded in June. During 2023, the Company purchased approximately 7.6 million shares of its outstanding common stock for \$346 million under this program. During 2022, the Company purchased approximately 9.2 million shares of its outstanding common stock for \$346 million under this program.

On June 21, 2024, the Company announced the launch of a new share buy-back plan comprising two programs of up to \$1,100 million to be executed within a three-years period. Since the program's inception in July 2024, the Company has repurchased approximately 6 million shares of its common stock for a total amount of \$184 million.

7.6.20.4. Unvested share awards for the Employees

On an annual basis, the Compensation Committee (on behalf of the Supervisory Board and with its approval) grants stock-based awards to the senior executives and selected employees (the "Employee Plan"). The awards are granted for services rendered under the Employee Plan. There are two types of unvested shares: (1) shares granted to employees, which are subject only to service conditions and vest over the requisite service period, and (2) shares granted to executives and other selected employees, for which vesting is subject to service and performance conditions.

For awards granted in 2021, 2022, 2023 and 2024, that are outstanding as of December 31, 2024, the performance conditions consist of two external targets (sales evolution and operating income compared to a basket of competitors) weighting for two thirds of the total number of awards granted, and of one internal target (Company's sustainability and diversity performance), weighting for one third of the total number of awards granted. Sustainability and diversity performance include environment/climate, diversity and inclusions indicators, ESG investor index and carbon rating.

Stock awards for executives of certain seniority and above are usually subject to three-year cliff vesting, while for other employees, they vest over a graded three-year service period (32% as of the first anniversary of the grant, 32% as of the second anniversary of the grant and 36% as of the third anniversary of the grant).

A summary of the unvested share activity by plan for the year ended December 31, 2024 is presented below:

Allocation under	Unvested as of December 31, 2023	Granted	Forfeited / waived	Vested	Unvested as of December 31, 2024
2021 Employee Plan	1,950,243	—	(8,612)	(1,941,631)	—
2022 Employee Plan	4,350,739	—	(38,730)	(2,032,697)	2,279,312
2023 Employee Plan	5,420,405	—	(117,240)	(1,566,662)	3,736,503
2024 Employee Plan	—	7,627,070	(27,810)	(1,766)	7,597,494
Total	11,721,387	7,627,070	(192,392)	(5,542,756)	13,613,309

The grant date weighted average fair value of unvested shares granted to employees under the 2021 Employee Plan (6,540,475 shares) was \$39.20. On March 23, 2022, the Compensation Committee approved the statement that with respect to the shares subject to performance conditions, two performance conditions were fully met (980,746 shares were cancelled on the failed performance condition). Consequently, the compensation expense recorded on the 2021 Employee Plan reflects the statement that – for the portion of shares subject to performance conditions – two thirds of the awards granted would fully vest, as far as the service condition was met.

The grant date weighted average fair value of unvested shares granted to employees under the 2022 Employee Plan (6,531,345 shares) was \$35.92. On March 22, 2023, the Compensation Committee approved the statement that with respect to the shares subject to performance conditions and graded vesting (2,605,521 shares), all three performance conditions were fully met. For awards subject to performance conditions and three years cliff vesting (100,000 shares), the Company estimated as of December 31, 2024 that 100% of the awards are expected to vest. Consequently, the compensation expense recorded on the 2022 Employee Plan reflects the statement that – for the portion of shares subject to performance conditions – 100% of the awards granted will fully vest, as far as the service condition is met.

The grant date weighted average fair value of unvested shares granted to employees under the 2023 Employee Plan (5,449,135 shares) was \$50.96. On March 20, 2024, the Compensation Committee approved the statement that with respect to the shares subject to performance conditions and graded vesting (2,009,952 shares), all three performance conditions were fully met. For awards subject to performance conditions and three years cliff vesting (532,000 shares), the Company estimated as of December 31, 2024 that 33% of the awards are expected to vest. Consequently, the compensation expense recorded on the 2023 Employee Plan reflects the statement that – for the portion of shares subject to performance conditions and graded vesting – 100% of the awards granted will fully vest, as far as the service condition is met, and for the portion of shares subject to performance conditions and three years cliff vesting – 33% of the awards granted will fully vest, as far as the service condition is met. The final measurement of these conditions is anticipated to occur in 2026 for shares subject to three years cliff vesting.

The grant date weighted average fair value of unvested shares granted to employees under the 2024 Employee Plan (7,627,070 shares) was \$37.69. On March 26, 2025, the Compensation Committee approved the statement that with respect to the shares subject to performance conditions and graded vesting (1,021,656 shares), one out of three performance conditions were met. For awards subject to performance conditions and three years cliff vesting (2,570,980 shares), as of the date these consolidated financial statements were issued, the Compensation Committee of the Supervisory Board had not yet made a final determination regarding the achievement of the performance conditions. For those awards, The Company estimated as of December 31, 2024 that 33% of these awards will vest. Therefore, the compensation expense recorded for the 2024 Employee Plan reflects the expected vesting of 33% of the awards granted, provided the service condition is met. The estimate of the expected number of awards subject to performance conditions and three year cliff vesting is subject to change. The final measurement of these conditions is anticipated to occur in 2027 for shares subject to three years cliff vesting.

The following table illustrates the classification of pre-payroll tax and social contribution stock-based compensation expense included in the consolidated income statement for the year ended December 31, 2024 and 2023:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Cost of sales	42	40
Research and development expenses	69	71
Selling, general and administrative expenses	111	125
Total pre-payroll tax and social contribution compensation	222	236

The grant date fair value of the shares vested in 2024 totaled \$231 million compared to \$226 million in 2023.

Stock-based compensation, excluding payroll tax and social contribution, capitalized as part of inventory was \$14 million as of December 31, 2024, compared to \$13 million as of December 31, 2023. As of December 31, 2024, there was \$223 million of total unrecognized compensation cost related to the grant of unvested shares, which is expected to be recognized over a weighted average period of approximately 10 months.

The total deferred income tax benefit recognized in the consolidated income statement related to unvested share-based compensation expense amounted to \$10 million for the year ended December 31, 2024, compared to \$22 million for the year ended December 31, 2023.

7.6.20.5. Other reserves

Other reserves include the following components as of December 31, 2024:

In millions of U.S. dollars	Share-based compensation reserve	Fair value reserve of financial assets at FVOCI	Cash Flow Hedge (CFH) reserve	Foreign currency translation reserve	Employee benefit plan reserve	Total other reserves
As of December 31, 2022	1,589	(18)	14	432	(116)	1,901
Employee share award scheme	243	—	—	—	—	243
Net movement recognized in the statement of comprehensive income	—	5	21	132	(19)	139
Transfer of cash flow hedge reserve to inventories	—	—	(2)	—	—	(2)
As of December 31, 2023	1,832	(13)	33	564	(135)	2,281
Employee share award scheme	211	—	—	—	—	211
Net movement recognized in the statement of comprehensive income	—	(1)	(93)	(236)	(2)	(332)
Transfer of cash flow hedge reserve to inventories	—	—	9	—	—	9
As of December 31, 2024	2,043	(14)	(51)	328	(137)	2,169

Share-based compensation reserve: The share-based compensation reserve is used to recognize the value of equity-settled share-based payment to employees, including key management personnel, as part of their remuneration. Refer to Note 7.6.20.4 for further details on these share-based compensation programs.

Fair value reserve of financial assets at FVOCI: This reserve records fair value changes on debt and equity securities measured at FVOCI.

Cash Flow hedge reserve: The cash flow hedge reserve contains the effective portion of the cash flow hedge relationship outstanding as of year-end.

Foreign currency translation reserve: The foreign currency translation reserve is used to record exchange differences arising from the translation of the financial statements for subsidiaries which functional currency is different from the U.S. dollar.

Employee benefit plan reserve: The employee benefit plan reserve is used to recognize the actuarial gains and losses and past service cost of post-employment pension plans.

7.6.20.6. Dividends

The Company is governed under the laws of the Netherlands. The Articles of Association provide that the net result for the year, after deduction of (i) any amount to set up and maintain reserves required by Dutch Law and the Articles of Association, (ii) if any of the Company's preference shares are issued and outstanding, the dividend to be paid to the holders of preference shares and (iii) the aforementioned allocation to the reserve fund, is subject to the disposition by the AGM.

The AGM held on May 22, 2024, authorized the distribution of a cash dividend of \$0.36 per outstanding share of the Company's common stock, to be distributed in quarterly installments of \$0.09 in each of the second, third and fourth quarters of 2024 and first quarter of 2025. An amount of \$81 million corresponding to the first installment, \$81 million corresponding to the second installment and \$72 million corresponding to the third installment were paid as of December 31, 2024. The amounts of \$9 million corresponding to the remaining portion of the third installment and \$79 million corresponding to the remaining installment were presented in the line "Other payables and accrued liabilities" of the consolidated statement of financial position as of December 31, 2024.

The 2023 AGM held on May 25, 2023 authorized the distribution of a cash dividend of \$0.24 per outstanding share of the Company's common stock, to be distributed in quarterly installments of \$0.06 in each of the second, third and fourth quarters of 2023 and first quarter of 2024. The amounts of \$55 million corresponding to the first installment, \$54 million corresponding to the second installment and \$54 million corresponding to the third installment were paid in 2023. An amount of \$54 million corresponding to the fourth installment were paid in 2024.

The 2022 AGM held on May 25, 2022 authorized the distribution of a cash dividend of \$0.24 per outstanding share of the Company's common stock, to be distributed in quarterly installments of \$0.06 in each of the second, third and fourth quarters of 2022 and first quarter of 2023. The amounts of \$55 million corresponding to the first installment, \$54 million corresponding to the second installment and \$48 million corresponding to the third installment were paid in 2022. An amount of \$6 million corresponding to the remaining portion of the third installment and \$54 million corresponding to the fourth installment were paid in 2023.

7.6.20.7. Legal reserves

Refer to Note 8.3.13 for the composition of the Company's legal reserves.

7.6.21. Other non-current liabilities

Other non-current liabilities consisted of the following:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Liabilities related to public funding	172	196
Advances received on capital grants	385	152
Advances from customers	12	25
Others	58	61
Total	627	434

Advances received on capital grants relate to Sanan ST JV, the entity the Group and Sanan Optoelectronics created in 2023 for high-volume 200mm SiC device manufacturing activities in China and that the Group fully consolidates. This entity is a party to a regional public funding program, primarily consisting in capital grants received on eligible capital expenditures (infrastructures and equipment). As of December 31, 2024, the Group received \$385 million of advances (\$152 million as of December 31, 2023) on these capital grants while the capital expenditures had not been incurred yet. Consequently,

these advances were reported as non-current liabilities in the consolidated statement of financial position as of December 31, 2024 and as of December 31, 2023.

Advances from customers are primarily related to multi-annual capacity reservation and volume commitment agreements signed in 2024 with certain customers, as described in Note 7.6.23.

7.6.22. Employee benefits

Employee benefits liabilities are detailed as follows:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Retirement benefit obligation liability	346	357
Other long-term employee benefits	112	102
Other employee benefits liabilities	50	45
Salaries and wages	569	699
Social charges on salaries and wages	216	231
Total employee benefits liabilities	1,293	1,434
Non-current assets	2	—
Current liabilities	833	968
Non-current liabilities	462	466

Pensions

The Group has a number of defined benefit pension plans covering employees in various countries. The defined benefit plans provide pension benefits based on years of service and employee compensation levels. The Group uses December 31 as measurement date for all its plans. Eligibility is generally determined in accordance with local statutory requirements. In 2024 and 2023, the major defined benefit pension plans and long-term employee benefit plans were in the USA (retirement plan closed to new entrants and future accrual), France (retirement indemnities), Switzerland (retirement pension system), United Kingdom (retirement benefit scheme closed to new entrants and future accrual) and Italy (termination indemnity plan (“TFR”) generated before July 1, 2007).

The amounts recognized in the statement of financial position are determined as follows:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Benefit obligations wholly or partially funded	(712)	(717)
Fair value of plan assets	646	654
Benefit obligations wholly unfunded	(260)	(274)
Asset ceiling	(20)	(20)
Total pension liabilities	(346)	(357)

The movements in the pension liability are as follows:

In millions of U.S. dollars	2024	2023
Beginning of the year	357	319
Exchange difference	(15)	13
Pension expense	47	39
Contributions paid	(40)	(40)
Remeasurement (gain) / loss recognized in OCI	(3)	26
End of the year	346	357

Changes in defined benefit obligations are as follows:

In millions of U.S. dollars	2024	2023
Beginning of the year	991	868
Service cost	32	28
Interest cost	36	36
Employee contributions	6	5
Plan amendment	3	(1)
Actuarial (gain) loss – Experience	2	5
Actuarial (gain) loss – Demographic assumptions	8	(1)
Actuarial (gain) loss – Financial assumptions	(21)	35
Benefits paid	(51)	(19)
Effect of foreign exchange translation	(34)	35
End of the year	972	991

Defined benefit obligations by main geographical locations are as follows:

In millions of U.S. dollars	2024	2023
France	181	186
Italy	75	85
Switzerland	216	205
United Kingdom	110	123
United States	308	316
Other countries	82	76
End of the year	972	991

Changes in plan assets are as follows:

In millions of U.S. dollars	2024	2023
Beginning of the year	654	567
Interest income	26	25
Employer contribution	25	26
Employee contribution	6	5
Benefits paid	(37)	(4)
Actuarial gain (loss)	(10)	13
Effect of foreign exchange translation	(18)	22
End of the year	646	654

The actual return on plan assets in 2024 was a gain of \$16 million (2023: gain of \$38 million). In 2024, the theoretical interest income on plan assets was a gain of \$26 million (2023: gain of \$25 million) resulting in a loss on plan assets of \$10 million (2023: gain of \$13 million).

Plan assets by main geographical locations are as follows:

In millions of U.S. dollars	2024	2023
France	3	3
Switzerland	186	181
United Kingdom	130	139
United States	273	278
Other countries	54	53
End of the year	646	654

The effects of the asset ceiling are as follows:

In millions of U.S. dollars	2024	2023
Beginning of the year	(20)	(18)
Effect of asset ceiling recognized during the year	1	(1)
Effect of foreign exchange translation	(1)	(1)
End of the year	(20)	(20)

The amounts recognized in the income statement related to pensions are as follows:

In millions of U.S. dollars	2024	2023
Current service cost	32	28
Scheme expenses	1	1
Plan amendments cost / (credit)	3	(1)
Net interest cost	11	11
Interest cost	36	36
Interest income	(26)	(25)
Interest on asset ceiling	1	—
Total pension costs	47	39

The Group's detailed pension plan asset allocation including the fair value measurements of those plan assets as of December 31, 2024 is as follows:

In millions of U.S. dollars	Total	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
Cash and cash equivalents	7	7	—	—
Equity securities	91	1	90	—
Government debt securities	63	—	63	—
Corporate debt securities	94	—	77	17
Investment funds	106	16	90	—
Real estate	10	—	10	—
Other (mainly insurance assets)	275	—	60	215
Total	646	24	390	232

The Group's detailed pension plan asset allocation including the fair value measurements of those plan assets as of December 31, 2023 is as follows:

In millions of U.S. dollars	Total	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
Cash and cash equivalents	7	7	—	—
Equity securities	87	1	86	—
Government debt securities	69	—	69	—
Corporate debt securities	123	—	101	22
Investment funds	100	14	86	—
Real estate	9	—	9	—
Other (mainly insurance assets)	259	—	48	211
Total	654	22	399	233

The majority of plans (in the United Kingdom, United States and Switzerland) are governed by an independent board of trustees, which includes employer representatives.

The majority of insurance contract plan assets relate to pension plans for the Group's employees in Switzerland. Those plans are provided by collective pension foundations and contributions are invested in fully insured assets that provide a guaranteed contractual return. As such, the fair value of such assets equals to the employees' accrued savings and calculated using total employer and employee contributions plus any accumulated interest credited, which is substantially equivalent to the related cash surrender value. The approach is consistent with prior years.

The Group's investment strategy for its pension plans is to optimize the long-term investment return on plan assets in relation to the liability structure to maintain an acceptable level of risk while minimizing the cost of providing pension benefits and maintaining adequate funding levels in accordance with applicable rules in each jurisdiction.

The Group's practice is to periodically conduct a review in each subsidiary of its asset allocation strategy, in such a way that the asset allocation is in line with the targeted asset allocation within reasonable boundaries. The Group's asset portfolios are managed in such a way as to achieve adapted diversity. The Group does not manage any assets internally.

After considering the funded status of the Group's defined benefit plans, movements in the discount rate, investment performance and related tax consequences, the Group may choose to make contributions to its pension plans in any given year in excess of required amounts. In 2024, the Group's contributions to plan assets were \$25 million (2023: \$26 million) and it expects to contribute cash of \$20 million in 2025.

The expected benefit payments, which reflect expected future service, as appropriate, but exclude plan expenses of the defined benefit obligations as of December 31, 2024, are as follows:

In millions of U.S. dollars	December 31, 2024
2025	69
2026	63
2027	55
2028	59
2029	66
Thereafter	380

Other long-term employee benefits

Other long-term employee benefits include seniority and loyalty award programs. The movements in the other long-term employee benefits liability are as follows:

In millions of U.S. dollars	2024	2023
Beginning of the year	102	90
Service cost	23	18
Interest cost	3	3
Actuarial (gain) loss – Experience	2	1
Actuarial (gain) loss – Demographic assumptions	—	(6)
Actuarial (gain) loss – Financial assumptions	(1)	2
Benefits paid	(12)	(9)
Effect of foreign exchange translation	(5)	3
End of the year	112	102

The amounts recognized in the income statement related to other long-term benefits are as follows:

In millions of U.S. dollars	2024	2023
Current service cost	23	18
Net interest cost	4	—
Interest cost	3	3
Immediate recognition of (gains) losses	1	(3)
Total other long-term benefits costs	27	18

Assumptions

The weighted average assumptions used in the determination of pension and other long-term obligations are as follows:

	2024	2023
Discount rate	3.87%	3.73%
Inflation rate	1.87%	1.74%
Future salary increase	2.43%	2.03%

The discount rate was determined by reference to high quality corporate bond rates applicable to the respective country of each plan and estimated terms of the defined benefit obligation. As required by IAS 19, and for pension plans with plan assets, the interest income on plan assets is set equal to the corresponding discount rate.

The average duration of Defined Benefit Obligations is 11 years in 2024 (2023: 9 years).

As of December 31, 2024, an increase of the discount rate of 0.50% would have resulted in a reduction of the Defined Benefit Obligations of \$54 million and a decrease of the discount rate of 0.50% would have resulted in an increase of the Defined Benefit Obligations by \$60 million. An increase of the inflation rate of 0.50% would have resulted in an increase of the Defined Benefit Obligations of \$7 million and a decrease of the inflation rate of 0.50% would have resulted in a decrease of the Defined Benefit Obligations of \$7 million. An increase of the life expectancy of one year would have resulted in an increase of the Defined Benefit Obligations of \$4 million and a decrease of the life expectancy of one year would have resulted in a decrease of the Defined Benefit Obligations of \$4 million. These sensitivity analyses are based on a change in an assumption while holding all other assumptions constant. When calculating the sensitivity of the defined benefit obligation to significant actuarial assumptions, the same method has been applied as when calculating the pension liability recognized within the consolidated statement of financial position.

Assumptions regarding future mortality experience are set based on advice from published statistics and experience in each territory.

Defined contribution plans

The Group has certain defined contribution plans, which accrue benefits for employees on a pro-rata basis during their employment period based on their individual salaries. In 2024, the annual cost of these plans amounted to approximately \$117 million (2023: \$114 million).

7.6.23. Trade accounts payable, other payables and accrued liabilities

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Trade accounts payable	1,323	1,856
Dividends due to shareholders	88	54
Taxes other than income taxes	79	81
Advances from customers	89	186
Liabilities related to public funding	42	96
Royalties	22	30
Interest payable	22	18
Utilities services	11	15
Freight services	4	3
Other accrued liabilities	63	69
Total other payables and accrued liabilities	420	552

Current liabilities related to public funding included \$2 million grants subject to a financial return (\$44 million as of December 2023).

Advances from customers are primarily related to multi-annual capacity reservation and volume commitment agreements signed in 2024 and 2022 with certain customers. Some of these arrangements include take-or-pay clauses, according to which the Group is entitled to receive the full amount of the contractual committed fees in case of non-compliant orders from those customers. Certain agreements include penalties in case the Group is not able to fulfill its contractual obligations. No significant provision for those penalties was reported on the consolidated statement of financial position as of December 31, 2024 and December 31, 2023.

7.6.24. Significant categories of income

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Sales of goods	13,217	17,239
License revenue and patent royalty income	52	47
Research tax credits recognized as a reduction of Research & Development expenses	109	101
Public funding recognized in Other income	266	201
Finance income	780	242
Total	14,424	17,830

7.6.25. Revenues

7.6.25.1. Nature of goods and services

The Group designs, develops, manufactures and markets a broad range of products, including discrete and standard commodity components, ASICs, full-custom devices and semi-custom devices and ASSPs for analog, digital and mixed-signal applications. In addition, the Group participates in the manufacturing value chain of smartcard products, which includes the production and sale of both silicon chips and smartcards.

The principal activities — separated by reportable segments — from which the Group generates its revenues are described in Note 7.6.26.

Other revenues consist of license revenue, service revenue related to transferring licenses, patent royalty income, sale of scrap materials and manufacturing by-products.

While the majority of the Group's sales agreements contain standard terms and conditions, the Group may, from time to time, enter into agreements that contain multiple performance obligations or terms and conditions. Those agreements concern principally the revenues from services, where the performance obligation is satisfied over time. The objective when allocating the transaction price is to allocate the transaction price to each performance obligation (or distinct good or service) in an amount that depicts the amount of consideration to which the Group expects to be entitled in exchange for transferring the promised goods or services to the customer.

7.6.25.2. Revenue recognition and disaggregation

The Group recognizes revenue from products sold to a customer, including distributors, when it satisfies a performance obligation at a point in time by transferring control over a product to the customer. This usually occurs at the time of shipment. The performance obligations included in contracts for the sale of goods contracts have the original expected length of less than one year. The transaction price is determined based on the contract terms, adjusted for price protection if applicable. The revenues from services are usually linked to performance obligations transferred over time and are recognized in line with the contract terms.

In 2024 and 2023, the Group signed several multi-annual capacity reservation and volume commitment arrangements with certain customers. These agreements constitute a binding commitment for the customers to purchase and for the Group to supply allocated committed volumes in exchange for additional consideration. The consideration related to commitment fees is reported as revenues from sale of products as it is usually based on delivered quantities. Advances from customers received as part of those agreements are described in Note 7.6.21 and 7.6.23.

The payment terms typically range between 30 to 90 days.

The Group's consolidated total revenues disaggregated by operating segment are presented in Note 7.6.26. The following table presents the Group's consolidated total revenues disaggregated by geographical region of shipment, nature and market channel.

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Total revenues by geographical region of shipment ⁽¹⁾		
EMEA	3,329	4,836
Americas	2,106	2,724
Asia Pacific	7,834	9,726
Total revenues	13,269	17,286
Total revenues by nature		
Revenues from sale of products	13,021	17,094
Revenues from sale of services	196	145
Other revenues	52	47
Total revenues	13,269	17,286
Total revenues by market channel ⁽²⁾		
OEM	9,629	11,468
Distribution	3,640	5,818
Total revenues	13,269	17,286

(1) Total revenues by geographical region of shipment are classified by location of customer invoiced or reclassified by shipment destination in line with customer demand. For example, products ordered by U.S.-based companies to be invoiced to Asia Pacific affiliates are classified as Asia Pacific revenues. Furthermore, the Group, among the different periods, may be affected by shifts in shipments from one location to another, as requested by customers.

(2) OEM are the end-customers to which the Group provides direct marketing application engineering support, while Distribution refers to the distributors and representatives that the Group engages to distribute its products around the world.

The Group does not disclose the value of unsatisfied performance obligations for (i) contracts with an original expected length of one year or less and (ii) contracts for which the Group recognizes revenue at the amount to which the Group has the right to invoice for services performed.

In 2024, the Group's largest customer, Apple Inc., represented 14.5% (2023: 12.3%) of consolidated total revenues, reported in AM&S, P&D, MCU and D&RF reportable segments.

7.6.26. Segment information

On January 10, 2024, the Group announced a new organization to deliver enhanced product development innovation and efficiency, time-to-market as well as customer focus by end market. The Group moved from three reportable segments (ADG, AMS and MDG) to four reportable segments, which implied a change in segment reporting effective from January 1, 2024. Prior-year comparative information has been adjusted accordingly.

As of December 31, 2024 the Group's reportable segments were as follows:

- *Analog products, MEMS and Sensors ("AM&S")*, comprised of ST analog products, MEMS sensors and actuators, and optical sensing solutions.
- *Power and discrete products ("P&D")*, comprised of discrete and power transistor products.
- *Microcontrollers ("MCU")*, comprised of general-purpose and automotive microcontrollers, microprocessors, and connected security products (incl. EEPROM).
- *Digital ICs and RF Products ("D&RF")*, comprised of automotive ADAS, infotainment, RF and communications products.

Total revenues of "Others" include revenues from sales assembly services and other revenues. For the computation of the segments' internal financial measurements, the Group uses certain internal rules of allocation for the costs not directly chargeable to the segments, including cost of sales, SG&A expenses and a part of R&D expenses. In compliance with the Group's internal policies, certain costs are not allocated to the segments, but reported in "Others". Those comprise unused capacity charges, including incidents leading to power outage, certain unallocated impairment and restructuring charges, management reorganization costs, start-up and phase-out costs, and other unallocated income (expenses) such as: strategic or special R&D programs, certain corporate-level operating expenses, patent claims and litigations, and other costs that are not allocated to reportable segments, as well as operating earnings of other products.

Wafer costs are allocated to the segments based on actual cost. From time to time, with respect to specific technologies, wafer costs are allocated to segments based on market price.

The segment information presented below under IFRS reflects the way the CODM monitors the performance of each segment and how resources are allocated to segments, which is based on the Group's primary financial reporting framework (U.S. GAAP).

The following tables present the Group's consolidated total revenues and consolidated operating income by reportable segment.

Total revenues by reportable segment:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
AM&S	4,764	5,478
P&D	3,126	3,852
MCU	3,466	5,668
D&RF	1,898	2,272
Total revenues of reportable segments	13,254	17,270
Others	15	16
Total revenues	13,269	17,286

Operating profit by reportable segment:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
AM&S	675	1,187
P&D	456	1,002
MCU	493	2,014
D&RF	562	806
Sub-total operating profit of reportable segments	2,186	5,009
Unallocated impairment charges	—	(58)
Unused capacity charges	(370)	(120)
Unallocated manufacturing results	(61)	(72)
Start-up and phase-out costs	(69)	(134)
Cancellation fees on committed equipment purchases	(18)	—
Strategic and other research and development programs and other non-allocated provisions ⁽²⁾	(7)	(34)
IFRS/U.S. GAAP Adjustments ⁽¹⁾:		
Net impact of capitalized development costs	72	38
Derivative instruments not designated as hedge instruments under IFRS	(45)	8
IFRIC 21 adjustment on levies	(1)	1
Employee benefits adjustments	13	3
Asset acquisition tax incentives	(19)	(36)
IFRS 16 adjustment on lease expenses	7	5
Operating profit	1,688	4,610

(1) The operating profit allocated by reportable segments as reported in the above table is based on the Group's primary financial reporting framework (U.S. GAAP) and reflects the way the CODM monitors the operating performance of each segment.

(2) Includes unallocated income and expenses such as certain corporate-level operating expenses and other income (costs) that are not allocated to the reportable segments.

The Group does not disclose any information regarding assets or non-cash expenses, including depreciation and amortization, for its reportable segments. Such information is not reviewed by the CODM to assess segment performance or to make decisions about resources to be allocated to each segment.

The following is a summary of operations by entities located within the indicated geographic areas for 2024 and 2023. Total revenues represent sales to third parties from the country in which each subsidiary is domiciled. The Group is incorporated under Dutch law with head offices located in the Netherlands while the Group's operational office and headquarters are located in Switzerland. A significant portion of property, plant and equipment expenditures is attributable to front-end and back-end facilities, located in the different countries in which the Group operates. As such, the Group mainly allocates capital spending resources according to geographic areas rather than along product segment areas.

Total revenues by geographical area:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Switzerland	3,944	5,755
France	147	158
Italy	34	54
USA	1,668	2,279
Singapore	6,808	8,138
Japan	657	890
Other countries	11	12
Total	13,269	17,286

Non-current assets other than other non-current financial assets and deferred tax assets:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Netherlands	4,186	4,011
Switzerland	1,597	1,596
France	2,017	2,274
Italy	2,677	2,434
Other European Countries	214	202
USA	60	68
China	586	261
Malaysia	471	483
Singapore	1,493	1,473
Other countries	281	302
Total	13,582	13,104

7.6.27. Expenses by nature

Expenses recorded as cost of sales, R&D and SG&A are detailed as follows:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Depreciation and amortization	2,056	1,864
Employee benefit expenses	3,990	4,045
Purchase of materials	2,908	3,175
Power and Gas	516	626
Freight	115	157
Purchase of subcontracting services	1,583	2,248
Changes in inventories	(167)	(72)
Transportation	96	102
Impairment charges	86	189
Royalties and patents	106	119
Advertising costs	25	23
Other expenses	407	267
Total cost of sales, selling, general and administrative, and research and development expenses	11,721	12,743

Employee benefit expenses are detailed as follows:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Wages and salaries	2,971	3,044
Payroll taxes and other social contribution charges	606	594
Share-based compensation expense	222	236
Pensions and other long-term benefits expense	191	171
Total employee benefit expenses	3,990	4,045
Of which included in:		
Cost of sales	1,717	1,722
Selling, general and administrative expenses	1,083	1,126
Research and development expenses	1,190	1,197

7.6.28. Other income

Other income consisted of the following:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
R&D funding	266	201
Foreign exchange forward contracts and other currency derivatives	9	14
Net foreign exchange gain	—	3
Gain on sale of non-current assets	5	6
Total other income	280	224

The Group receives public funding from governmental bodies in several jurisdictions. Public funding for research, development and other innovation programs is recognized ratably as the related costs are incurred once the agreement with the respective governmental body has been signed and all applicable conditions have been met.

Foreign exchange gains, net of foreign exchange forward contracts and other currency derivatives, represent the portion of exchange rate changes on transactions denominated in currencies other than a subsidiary's functional currency and the changes in fair value of derivative instruments which are not designated as hedge, as described in Note 7.6.14.4.

7.6.29. Other expenses

Other expenses consisted of the following:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Start-up and phase-out costs	69	134
Foreign exchange forward contracts and other currency derivatives	42	—
Net foreign exchange loss	3	—
Patent costs	5	12
Cancellation fees of committed equipment purchases	18	—
Other expenses	3	11
Total other expenses	140	157

Start-up costs represent costs incurred in the ramp-up phase of the Group's newly integrated manufacturing activities.

Foreign exchange losses, net of foreign exchange forward contracts and other currency derivatives, represent the portion of exchange rate changes on transactions denominated in currencies other than a subsidiary's functional currency and the changes in fair value of derivative instruments which are not designated as hedge, as described in Note 7.6.14.4.

Patent costs mainly include legal and attorney fees and payment for claims, patent pre-litigation consultancy and legal fees. They are reported net of settlements, if any, which primarily include reimbursements of prior patent litigation costs.

Cancellation fees for committed equipment purchases are costs incurred when equipment acquisition is canceled or postponed.

7.6.30. Finance income

Total finance income consisted of the following:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Change in fair value of the call option of Tranche A convertible bonds issued on August 4, 2020	—	1
Change in fair value of the call option of Tranche B convertible bonds issued on August 4, 2020	—	14
Change in fair value of the conversion option of Tranche A convertible bonds issued on August 4, 2020	225	—
Change in fair value of the conversion option of Tranche B convertible bonds issued on August 4, 2020	252	—
Accretion on quoted debt securities	—	47
Nominal interest income on quoted debt securities	63	15
Other finance income	240	165
Total finance income	780	242

As described in Note 7.6.14.3, the change in fair value of the non-equity derivative instruments corresponding to the bondholders' conversion option and the issuer's call option embedded in the unsecured senior convertible bonds issued on August 4, 2020, generated an income of \$477 million and a loss of \$46 million respectively, for the year ended December 31, 2024 compared to a loss of \$249 million and an income of \$15 million respectively, for the year ended December 31, 2023.

Other finance income is related to cash and cash equivalents and short-term deposits.

7.6.31. Finance costs

Total finance costs consisted of the following:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Interest on Senior Bonds	24	24
Amortization of issuance costs on Senior Bonds	1	1
Change in fair value of the conversion option of Tranche A convertible bonds issued on August 4, 2020	—	119
Change in fair value of the conversion option of Tranche B convertible bonds issued on August 4, 2020	—	130
Change in fair value of the call option of Tranche A convertible bonds issued on August 4, 2020	14	—
Change in fair value of the call option of Tranche B convertible bonds issued on August 4, 2020	32	—
Interests on lease liabilities	12	11
Interests on long-term loans and borrowings	77	47
Bank charges and commissions	3	4
Other finance expense	1	1
Total finance costs	164	337

No borrowing costs were capitalized in 2024 and 2023.

As described in Note 7.6.14.3, the change in fair value of the non-equity derivative instruments corresponding to the bondholders' conversion option and the issuer's call option embedded in the unsecured senior convertible bonds issued on August 4, 2020, generated an income of \$477 million and a

loss of \$46 million respectively, for the year ended December 31, 2024 compared to a loss of \$249 million and an income of \$15 million respectively, for the year ended December 31, 2023

Leases are further described in Note 7.6.11.

7.6.32. Components of other comprehensive income

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Cash flow hedges:		
Gains / (losses) arising during the year	(96)	26
Reclassification adjustments for (gains) / losses included in the income statement	(10)	(2)
Total	(106)	24

7.6.33. Income tax

The major components of income tax benefit (expense) for the years ended December 31, 2024 and 2023 are:

Consolidated income statement

In millions of U.S. dollars	December 31, 2024	December 31, 2023
The Netherlands taxes – current	—	—
Foreign taxes – current	(185)	(528)
Current taxes	(185)	(528)
The Netherlands taxes – deferred	—	—
Foreign deferred taxes	(124)	9
Deferred taxes	(124)	9
Income tax expense	(309)	(519)

Consolidated statement of other comprehensive income (deferred tax related to items charged or credited directly to equity during the year).

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Cash Flow Hedge	13	(3)
Re-measurements of employee benefit obligations	(1)	6
Debt instruments at FVOCI	—	(1)
Income tax credited (charged) directly to equity	12	2

A reconciliation between income tax benefit and the product of income before tax multiplied by The Netherlands' statutory tax rate for the years ended December 31, 2024 and 2023 is as follows:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Gain (loss) before income tax	2,304	4,515
Income tax benefit (expense) at The Netherlands' statutory tax rate of 25.8% (2023: 25.8%)	(594)	(1,165)
Permanent differences and other non-deductible, non-taxable items	59	(5)
Change in deferred tax assets recognition	(14)	(3)
Effect of changes in tax laws and similar	—	152
Current year tax credits	37	29
Other tax and credits	(15)	34
Benefits from tax holidays	29	45
Current year tax risk	(3)	(8)
Earnings (losses) of subsidiaries taxed at different rates	192	402
Income tax expense	(309)	(519)

During the year ended December 31, 2024, the Group did not recognize deferred tax assets on net operating losses and tax credits for an approximate amount of \$21 million (2023: \$9 million).

The variation in the line "Effect of changes in tax laws and similar" in 2023 mainly relates to the recognition of a net deferred tax asset of \$52 million related to a tax credit granted for technological activities, as well as the impact of the conclusion in 2023 of tax authority discussions resulting in the recognition of a net deferred tax asset of \$81 million for intangibles recognized for tax purposes. These will be amortized over time and result in a future cash tax benefit.

The tax holidays represent a tax exemption period aimed at attracting foreign technological investment in certain tax jurisdictions. These agreements are present in various countries and include programs that reduce up to 100% of taxes in years affected by the agreements. The Group's tax holidays expire at various dates through the year ending December 31, 2030.

For a particular tax-paying component of the Group and within a particular tax jurisdiction, all deferred tax assets and liabilities are offset and presented as a single amount. The Group does not offset deferred tax assets and liabilities attributable to different tax-paying components or to different tax jurisdictions.

In millions of U.S. dollars	December 31, 2023	Exchange differences	Income tax charged directly to equity	Income statement benefit (expense)	December 31, 2024
Deferred tax assets					
Tax loss carryforwards, tax credits and other tax attributes	309	(11)	—	(9)	289
Fixed asset depreciation	61	(3)	—	(1)	57
Receivables for government funding	155	(13)	—	44	186
Pension	68	(4)	(1)	2	65
Lease liabilities	66	(15)	—	8	59
Other	154	(1)	13	(15)	151
Total deferred tax assets	813	(47)	12	29	807
Deferred tax liabilities					
Accelerated tax depreciation	(40)	—	—	(13)	(53)
Acquired intangible assets	(24)	—	—	(2)	(26)
Advances of government funding	(185)	15	—	(67)	(237)
Capitalized development cost	(123)	—	—	(47)	(170)
Right-of-use assets	(65)	15	—	(9)	(59)
Other	(22)	1	—	(15)	(36)
Total deferred tax liabilities	(459)	31	—	(153)	(581)
Net deferred tax	354	(16)	12	(124)	226

The balance represents management's assessment of the likelihood of future realization of the net DTA recognized in the period against future taxable profit.

The line other deferred tax assets is primarily composed of deferred tax assets related to Inventory, Stock Awards and Commercial Accruals.

In millions of U.S. dollars	December 31, 2022	Exchange differences	Income tax charged directly to equity	Income statement benefit (expense)	December 31, 2023
Deferred tax assets					
Tax loss carryforwards, tax credits and other tax attributes	297	6	—	6	309
Fixed asset depreciation	68	5	—	(12)	61
Receivables for government funding	121	5	—	29	155
Pension	62	1	6	(1)	68
Lease Liabilities	51	1	—	14	66
Other	114		(3)	43	154
Total deferred tax assets	713	18	3	79	813
Deferred tax liabilities					
Accelerated tax depreciation	(37)	—	—	(3)	(40)
Acquired intangible assets	(23)	—	—	(1)	(24)
Advances of government funding	(177)	(6)	—	(2)	(185)
Capitalized development cost	(68)	—	—	(55)	(123)
Right-of-use assets	(50)	(1)	—	(14)	(65)
Other	(26)	—	(1)	5	(22)
Total deferred tax liabilities	(381)	(7)	(1)	(70)	(459)
Net deferred tax	332	11	2	9	354

The line other deferred tax assets is primarily composed of deferred tax assets related to Inventory, Stock Awards and Commercial Accruals.

As of December 31, 2024, the Group has tax loss carry forwards, investment tax credits and other tax attributes that expire starting 2025 out of which a deferred tax assets of \$309 million are recognized, the expiry of the deferred tax assets as follows:

Year	In millions of U.S. dollars
2025	3
2026	10
2027	13
2028	14
2029	15
Thereafter	254
Total	309

The amount reported on the line "Thereafter" includes a tax credit which will expire in 2030 for \$64 million. The remaining amount has no expiration date.

As of December 31, 2023, the Group has deferred tax assets on tax loss carry forwards and investment credits that expire starting 2024, as follows:

Year	In millions of U.S. dollars
2024	15
2025	15
2026	18
2027	19
2028	17
Thereafter	246
Total	330

The amount reported on the line “Thereafter” includes tax credit which will expire in 2030 for \$52 million. The remaining amount has no expiration date.

As of December 31, 2024, deferred tax assets not recognized in the statement of financial position amounted to \$699 million (2023: \$782 million) and are mainly composed of the followings:

- \$234 million (2023: \$226 million) relating to an agreement granting the Group certain tax credits for capital investments purchased through the year ended December 31, 2006. Any unused tax credits granted under the agreement will be impacted by a legal inflationary index of 3.45% (2023: 2.64%). The credits may be utilized depending on the Group meeting certain program criteria. The credit may be utilized depending on the Company meeting certain program criteria and have no expiration date. In addition to this agreement, from 2007 onwards, the Group has continued and will continue to receive tax credits on the yearly capital investments, which may be used to offset that year’s tax liabilities and increases by the legal inflationary rate. However, pursuant to the inability to use these credits currently and in future years, the Group did not recognize in 2024 and in 2023 these deferred tax assets in the statement of financial position.
- \$213 million (2023: \$210 million) of tax loss carry forwards generated in on-going operations or corresponding to net operating losses acquired in business combinations, whose recovery was not considered probable. The majority of these unrecognized tax loss carry forwards has no expiry date.
- \$252 million (2023:\$346 million) relating to the deferred tax assets not recognized on the tax credit granted to the Group for certain technological activities for an amount of \$117 million expiring in 2030 and the impact of the conclusion of discussions with the tax authorities for intangibles recognized for tax purposes for \$135 million expiring on a linear basis until 2029.

No deferred tax liability is recognized on temporary differences of \$493 million relating to the unremitted earnings of subsidiaries as the Group is able to control the timings of the reversal of these temporary differences and it is probable that they will not reverse in the foreseeable future. As of December 31, 2024, a deferred tax liability of \$8 million was recognized on the amount of earnings expected to be repatriated in the foreseeable future.

Pillar II income taxes

Pillar II legislation has been enacted in certain jurisdiction the Group operates (Netherlands, the majority of the European Countries and Switzerland). The legislation is effective for the Group's financial year beginning January 1, 2024.

The Group applies the exception to recognizing and disclosing information about deferred tax assets and liabilities related to Pillar Two income taxes, as provided in the amendments to IAS 12 issued in May 2023.

The assessment of the 2024 exposure to Pillar II income taxes is based on the most recent tax filings, 2024 draft country-by-country reporting and the US GAAP financial statements for the constituent entities

in the Group. Based on the assessment, the Pillar II effective tax rates in most of the jurisdictions are above 15%. However, there is a limited number of jurisdictions where the transitional safe harbour relief does not apply and the Pillar II effective tax rate is slightly below 15%. Therefore, the Group has recorded a current tax expense related to Pillar II income taxes of \$9 million in those jurisdictions. The Group is continuously monitoring the Pillar II legislation and related guidance which are still evolving and may have an impact on the Group's Pillar II tax charge in future periods.

7.6.34. Earnings per share

For the year ended December 31, 2024 and December 31, 2023, earnings per share (“EPS”) were calculated as follows:

In millions of U.S. dollars except earnings per share data	December 31, 2024	December 31, 2023
Basic EPS		
Net profit attributable to the equity holder of the parent as reported	1,987	3,985
Weighted average shares outstanding	901,210,072	903,513,952
Basic EPS	2.20	4.41
Diluted EPS		
Net profit attributable to the equity holder of the parent as reported	1,987	3,985
Weighted average shares outstanding	901,210,072	903,513,952
Dilutive effect of stock awards	6,264,544	5,970,543
Number of shares used for diluted EPS	907,474,616	909,484,495
Diluted EPS	2.19	4.38

There was no dilutive effect of the senior unsecured convertible bonds issued on August 4, 2020 in the 2024 and 2023 diluted Earnings per Share since the conversion features were out-of-the-money.

7.6.35. Related party transactions

The below table summarizes transactions incurred in 2024 and 2023 with companies for which certain members of the Group's management perform similar policymaking functions. These include, but are not limited to: Dassault Systèmes, Orange, Politecnico di Milano and Sopra Steria. Each of the aforementioned arrangements and transactions is negotiated without the personal involvement of the Supervisory Board members and are made in line with market practices and conditions. The amounts reported on the below table correspond to transactions up to the date members of the Company's management hold these similar functions.

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Sales of goods and services to entities controlled by key management personnel	—	5
Purchases of goods and services and other contributions made to entities controlled by key management personnel	29	27
Accounts receivable from entities controlled by key management personnel	—	—
Accounts payable from entities controlled by key management personnel	4	6

The Group did not hold any significant equity-method investments as of December 31, 2024 and 2023. Consequently, the Group did not report any material transaction with this type of investees in the corresponding years.

The Group made a cash contribution of \$1 million for the year ended December 31, 2024 to the ST Foundation, a non-profit organization established to deliver and coordinate independent programs in line with its mission. A cash contribution of \$1 million was made for the year ended December 31, 2023. Certain members of the Foundation's Board are senior members of the Group's management.

In 2024 and 2023, the total remuneration paid to the sole member of the Managing Board and to the other executive officers was as follows:

For the year ended December 31, 2024, in U.S. dollars	Short-term benefits			Social security contributions ⁽¹⁾	Post- employment benefits Pensions ⁽²⁾	Termination benefits	Share- based payments Unvested stock awards	Total
	Base Salary	Bonus	Benefits					
Members of the Managing Board ⁽³⁾	1,757,675	2,458,745	188,735	1,259,295	1,346,909	—	4,255,388	11,266,747
Executive Committee (excluding sole member of the Managing Board)	5,952,378	9,043,380	1,422,243	4,639,390	1,184,059	7,795,680	18,500,090	48,537,220
Executive Vice Presidents	10,554,925	7,389,370	669,443	6,661,794	—	3,639,304	19,273,622	48,188,459
Senior Management total remuneration	18,264,978	18,891,495	2,280,421	12,560,479	2,530,968	11,434,984	42,029,100	107,992,426

For the year ended December 31, 2023, in U.S. dollars	Short-term benefits			Social security contributions ⁽¹⁾	Post- employment benefits Pensions ⁽²⁾	Termination benefits	Share- based payments Unvested stock awards	Total
	Base Salary	Bonus	Benefits					
Sole member of the Managing Board	1,213,544	2,819,125	117,737	877,128	435,717	—	1,838,364	7,301,615
Executive Committee (excluding sole member of the Managing Board)	6,782,818	8,553,348	879,991	3,612,613	1,038,655	2,638,475	21,024,493	44,530,393
Executive Vice Presidents	11,228,662	8,282,397	661,911	6,066,240	—	3,565,132	27,147,592	56,951,934
Senior Management total remuneration	19,225,024	19,654,870	1,659,639	10,555,981	1,474,372	6,203,607	50,010,449	108,783,942

(1) Include compulsory contribution to pension plans

(2) Complementary pension plan for Senior Management

(3) The compensation paid to our President and Chief Financial Officer as included in this table concerns his compensation received since his appointment as member of the Managing Board on May 22, 2024.

The Group's 31 Senior Management members were granted in 2024 for free 1,923,000 unvested shares subject to the achievement of performance objectives and service conditions being met. The weighted average grant date fair value of unvested shares granted to employees under the 2024 Employee Plan was \$37.69.

The Group's 34 Senior Management members were granted in 2023 for free 1,271,240 unvested shares subject to the achievement of performance objectives and service conditions being met. The weighted average grant date fair value of unvested shares granted to employees under the 2023 Employee Plan was \$50.96.

The bonus paid to the executive officers corresponds to a Corporate EIP that entitles selected executives to a yearly bonus based upon the assessment of the achievement of individual, organizational and company objectives that are set on an annual basis and focused, *inter alia*, on return on net assets, customer service, profit, cash flow and market share. The maximum bonus awarded under the EIP is based upon a percentage of the executives' salary and the overall achievement of the above objectives on an annual basis.

The 2024 EIP includes a sustainability index for Senior Management, as part of the Group's effort to include corporate social responsibility into the performance framework of Senior Management. The sustainability index has a weighting in the range of 5%-10%, and is divided into four criteria related to health and safety, environment, diversity and inclusion, and people engagement.

The Senior Management members were covered in 2024 and 2023 under certain Group life and medical insurance programs, pension, state-run retirement and other similar benefit programs and other miscellaneous allowances.

At the end of the year 2005, the Compensation Committee recommended and the Supervisory Board decided to grant an additional pension benefit plan to the Group's sole member of the Managing Board and a limited number of senior executives that have made key contributions to the Group's success. Pursuant to this plan, in 2024 the Group made a contribution of \$1.35 million to the plan of the members of the Managing Board, and of \$1.18 million to the plan for all beneficiaries other than the members of the Managing Board. The amount of pension plan payments made for other beneficiaries, such as former employees retired in 2024 and/or no longer salaried in 2024 were \$1.1 million.

The Group did not extend any loans or overdrafts to the members of the Managing Board, nor to any other member of Senior Management. Furthermore, the Group has not guaranteed any debts or concluded any leases with the members of the Managing Board, nor with any other member of Senior Management or their families.

The members of the Senior Management, including the members of the Managing Board were covered in 2024 under certain group life and medical insurance programs provided by the Group. The aggregate additional amount set aside in 2024 to provide pension, retirement or similar benefits for the Senior Management, including the members of the Managing Board, in addition to the amounts allocated to the complementary pension plan described above and is estimated to have been approximately \$10.05 million, which includes statutory employer contributions for state run retirement, similar benefit programs and other miscellaneous allowances.

Individual remuneration paid to Supervisory Board members in 2024 and 2023 was recorded as follows:

In Euros	2024 ⁽¹⁾	2023 ⁽¹⁾
Nicolas Dufourcq ⁽²⁾	—	—
Maurizio Tamagnini ⁽⁵⁾	172,500	177,500
Pascal Daloz ⁽⁴⁾	73,500	—
Janet Davidson	115,000	117,500
Yann Delabrière ⁽⁴⁾	10,000	100,500
Ana de Pro Gonzalo	161,000	162,500
Heleen Kersten ⁽³⁾	—	13,000
Alessandro Rivera ⁽³⁾	—	10,000
Frédéric Sanchez	109,500	109,000
Donatella Sciuto	107,500	105,000
Paolo Visca ⁽³⁾	98,000	91,000
Hélène Vletter-van Dort ⁽³⁾	123,500	110,500
	970,500	996,500

(1) These amounts include a fixed annual compensation for the directors' mandate, together with attendance fees from January 1 until December 31.

(2) Mr. Dufourcq waived his rights to receive any compensation from the Group in relation to his mandate as a member of the Supervisory Board or otherwise.

(3) Ms. Heleen Kersten and Mr. Alessandro Rivera were members of the Supervisory Board until May 24, 2023, on which date their term expired and on such date Mr. Paolo Visca and Mrs. Hélène Vletter-van Dort were appointed as new members of the Supervisory Board.

(4) Mr. Yann Delabrière was a member of our Supervisory Board until May 22, 2024, on which date his term expired and on such date Mr. Pascal Daloz was appointed as a new member of our Supervisory Board.

(5) Mr. Maurizio Tamagnini was a member of our Supervisory Board until his resignation on March 19, 2025.

No share awards were granted to Supervisory Board members and professionals in 2024 and 2023.

7.6.36. Commitments, contingencies, claims and legal proceedings

Commitments

The Group's commitments relate to multi-annual agreements with suppliers when there is a fixed, non-cancelable commitment or when minimum payments are due on a committed delivery schedule. These commitments are primarily comprised of purchase commitments for outsourced foundry wafers (\$1.1 billion) and firm contractual commitments related to power purchase and minimum energy efficiency, as part of the Group's actions to become carbon neutral by 2027 on scope 1 and 2 and focusing on product transportation, business travel and employee commuting emissions for scope 3 (\$1 billion).

Contingencies

The Group is subject to possible loss contingencies arising in the ordinary course of business. These include but are not limited to: product liability claims and/or warranty cost on the products of the Group, contractual disputes, indemnification claims, claims for unauthorized use of third-party intellectual property, employee grievances, tax claims beyond assessed uncertain tax positions environmental damages. The Group is also exposed to numerous legal risks which until now have not resulted in legal disputes and proceedings. These include risks related to product recalls, environment, shareholder rights, tariffs and export control regulations, anti-trust, anti-corruption, competition as well as other compliance regulations. The Group may also face claims in the event of breaches of law committed by individual employees or third parties. In determining loss contingencies, the Group considers the likelihood of impairing an asset or the occurrence of a liability at the date of the consolidated financial statements as well as the ability to reasonably estimate the amount of such loss or liability. The Group records a provision for a loss contingency when information available before the consolidated financial statements

are issued or are available to be issued indicates that it is probable that an asset has been impaired or a liability has been incurred at the date of the consolidated financial statements and when the amount of loss can be reasonably estimated. The Group regularly re-evaluates any potential losses and claims to determine whether provisions need to be adjusted based on the most current information available to the Group. Changes in these evaluations could result in an adverse material impact on the Group's results of operations, cash flows or its financial position for the period in which they occur.

Claims and legal proceedings

The Group has received and may in the future receive communications alleging possible infringements of third-party patents or other third-party intellectual property rights. Furthermore, the Group from time to time enters into discussions regarding a broad patent cross license arrangement with other industry participants. There is no assurance that such discussions may be brought to a successful conclusion and result in the intended agreement. The Group may become involved in costly litigation brought against the Group regarding patents, mask works, copyrights, trademarks or trade secrets. In the event that the outcome of any litigation would be unfavorable to the Group, the Group may be required to take a license to third-party patents and/or other intellectual property rights at economically unfavorable terms and conditions, and possibly pay damages for prior use and/or face an injunction, all of which individually or in the aggregate could have a material adverse effect on the Group's results of operations, cash flows, financial position and/or ability to compete.

On December 4, 2023, a jury in the United States District Court for the Western District of Texas in Waco, Texas (USA) returned a verdict in a patent infringement lawsuit in favor of the plaintiff, Purdue University. On June 7, 2024, the Court accepted the jury's verdict and entered a judgment against the Group in the amount of \$32 million. Thereafter, the Group filed several post-trial motions challenging the verdict. In the event the Court denies the Group's post-trial motions, the Group intends to appeal to the U.S. Court of Appeals for the Federal Circuit in Washington DC. The risk on this case is considered possible with the possible loss currently estimated at \$32 million.

The Group has contractual commitments to various customers which could require the Group to incur costs to repair or replace defective products it supplies to such customer. The duration of these contractual commitments varies and, in certain cases, is indefinite. The Group is otherwise also involved in various lawsuits, claims, inquiries, inspections, investigations and/or proceedings incidental to its business and operations. Such matters, even if not meritorious, could result in the expenditure of significant financial or managerial resources. Any of the foregoing could have a material adverse effect on the Group's results of operations, cash flows or its financial position.

Other Contingencies

The Group regularly evaluates claims and legal proceedings together with their related probable losses to determine whether they need to be adjusted based on the current information available to the Group. There can be no assurance that its recorded reserves or insurance policies will be sufficient to cover the extent of its potential liabilities. Legal costs associated with claims are expensed as incurred. In the event of litigation which is adversely determined with respect to the Group's interests, or in the event the Group needs to change its evaluation of a potential third-party claim, based on new evidence or communications, a material adverse effect could impact its operations or financial condition at the time it were to materialize.

As of December 31, 2024 and 2023, respectively, provisions for estimated probable losses with respect to claims and legal proceedings were not considered material.

7.6.37. Financial risk management objectives and policies

The Group is exposed to changes in financial market conditions in the normal course of business due to its operations in different foreign currencies and its ongoing investing and financing activities. The Group's activities expose it to a variety of financial risks: market risk (including foreign exchange risk, fair value interest rate risk, cash flow interest rate risk and price risk), credit risk and liquidity risk. The Group's overall risk management program focuses on the unpredictability of financial markets and seeks to minimize potential adverse effects on the Group's financial performance. The Group uses derivative financial instruments to hedge certain risk exposures.

Financial risk management is carried out by a central treasury department (Corporate Treasury). Additionally, a treasury committee, chaired by the Chief Financial Officer, steers treasury activities and ensures compliance with corporate policies. Treasury activities are thus regulated by the Group's policies, which define procedures, objectives and controls. The policies focus on the managing financial risk in terms of exposure to market risk, credit risk and liquidity risk. Treasury controls are subject to internal audits. Most treasury activities are centralized, with any local treasury activities subject to oversight from Corporate Treasury. Corporate Treasury identifies, evaluates and hedges financial risks in close cooperation with the Group's subsidiaries. It provides written principles for overall risk management, as well as written policies covering specific areas, such as foreign exchange risk, interest rate risk, price risk, credit risk, use of derivative financial instruments, and investments of excess liquidity. The majority of cash and cash equivalents is held in U.S. dollars and Euros and is placed with financial institutions rated at least a single "A" long-term rating from two of the major rating agencies, meaning at least A3 from Moody's and A- from S&P and Fitch ratings, or better. These ratings are closely and continuously monitored in order to manage exposure to the counterparty's risk. Hedging transactions are performed only to hedge exposures deriving from operating, investing and financing activities conducted in the normal course of business.

Market risk

Foreign exchange risk

The Group conducts its business on a globally in various major international currencies. As a result, the Group is exposed to adverse movements in foreign currency exchange rates, primarily regarding the Euro. Foreign exchange risk mainly arises from recognized assets and liabilities at the Company's subsidiaries and future commercial transactions.

Management has set up a policy to require the Group's subsidiaries to hedge their entire foreign exchange risk exposure with the Group through financial instruments transacted or overseen by Corporate Treasury. Subsidiaries used forward contracts and purchased currency options to manage their foreign exchange risk arising from foreign-currency-denominated assets and liabilities. Foreign exchange risk arises when recognized assets and liabilities are denominated in a currency that is not the entity's functional currency. These instruments do not qualify as hedging instruments for accounting purposes. Forward contracts and currency options, including collars, are also used by the Group to reduce its exposure to U.S. dollar fluctuations in Euro-denominated forecasted intercompany transactions that cover a large part of its R&D and corporate costs as well as a portion of its front-end manufacturing production costs for semi-finished goods. The Group also hedges through the use of currency forward contracts certain Singapore dollar-denominated manufacturing forecasted transactions. The derivative instruments used to hedge these forecasted transactions meet the criteria for designation as cash flow hedge. The hedged forecasted transactions have a high probability of occurring for hedge accounting purposes.

It is the Group's policy to have the foreign exchange exposures in all the currencies hedged month by month against the monthly standard rate. At each month end, the forecasted flows for the coming month are hedged together with the fixing of the new standard rate. For this reason, the hedging transactions will have an exchange rate very close to the standard rate at which the forecasted flows will be recorded in the following month. As such, the foreign exchange exposure of the Group, which consists of the balance sheet positions and other contractually agreed transactions, is always close to zero and any movement in the foreign exchange rates will therefore not influence the exchange effect on items of the consolidated

income statement. Any discrepancy between the forecasted values and the actual results is constantly monitored and prompt actions are taken, if needed.

The hedging activity of the Group and the impact on the financial statements is described in detail in Note 7.6.14.4.

The following sensitivity analysis was based on recognized assets and liabilities, including non-monetary items, of the Company and its subsidiaries. Equity would have been approximately \$98 million higher/lower (2023: \$88 million higher/lower) if the Euro strengthened/weakened by 300 basis points against the U.S. dollar, arising mainly from translation of net assets from subsidiaries whose functional currency is the Euro.

As of December 31, 2024 if the Euro/U.S. dollar exchange rate had strengthened by 300 basis points with all other variables held constant, net result for the year would have been \$61 million higher (2023: \$59 million higher), mainly as a result of foreign exchange gains on outstanding derivative instruments. If the Euro/U.S. dollar exchange rate had weakened by 300 basis points with all other variables held constant, impact in net income would have been \$68 million lower (2023: \$56 million lower), mainly due to foreign exchange losses on outstanding derivative instruments.

Cash flow and fair value interest rate risk

The Group's interest rate risk arises from long-term borrowings. Borrowings issued at variable rates expose the Group to cash flow interest rate risk. Borrowings issued at fixed rates expose the Group to fair value interest rate risk.

The Group analyzes its interest rate exposure on a dynamic basis. Various scenarios are simulated taking into consideration refinancing, renewal of existing positions, alternative financing and hedging. The Group invests primarily on a short-term basis and as such its liquidity is invested in floating interest rate instruments. As a consequence, the Group is exposed to interest rate risk due to potential mismatch between the return on its short-term floating interest rate investments and the portion of its long-term debt issued at fixed rate.

As of December 31, 2024 and 2023, if interest rates had been 20 basis points higher/lower with all other variables held constant, net income for the year would have been \$2 million higher/lower respectively, mainly as a result of a high level of liquid assets in relation to debt, with no material impact on equity.

During 2024 and 2023, the Group's borrowings at variable rate were denominated in Euros and in U.S. dollars.

Price risk

As part of its on-going investing activities, the Group may be exposed to quoted security price risk for investments measured at fair value, as described in Note 7.6.14.1.

The measurement for accounting purposes of the embedded derivative instruments of the senior unsecured convertible bonds issued on August 4, 2020 is dependent on various factors including the performance of STMicroelectronics ordinary shares. With respect to the valuation of the embedded issuer's call options as of December 31, 2024, if the price of the Company's ordinary shares, as measured on the New York Stock Exchange, with other valuation inputs remaining equal, increases by 10%, the value of the embedded call options would increase by \$1 million (2023: increase of \$13 million), whereas for a decrease of 10% in the share price, the value of the embedded call options would decrease by \$1 million (2023: decrease of \$10 million). With respect to the valuation of the embedded bondholders' conversion options as of December 31, 2024, if the price of the Company's ordinary shares, as measured on the New York stock exchange, with other valuation inputs remaining equal, increases by 10%, the value of the embedded conversion options would increase by \$16 million (2023: increase of \$131 million), whereas for a decrease of 10% in the share price, the value of the embedded conversion options would

decrease by \$12 million (2023: decrease of \$121 million). Details of the sensitivity of the other valuation factors, more specifically implied volatility, are presented in Note 7.6.14.5.

Credit risk

Credit risk is the risk that a counterparty will not meet its obligations under a financial instrument or customer contract, leading to a financial loss. Credit risk typically arises from cash and cash equivalents, contractual cash flows of debt investments carried at amortized cost, measured at FVOCI and at FVPL, the counterparty of derivative financial instruments and deposits with banks and financial institutions, as well as credit exposure to customers, including outstanding receivables.

The Group is exposed to credit risk from its operating activities (primarily for trade receivables) and from its financing activities, including deposits with banks and financial institutions, foreign exchange transactions and other financial instruments.

Credit risk is managed at the Group level. The Group selects banks and/or financial institutions that operate with the Group based on the criteria of long-term rating from at least two major rating agencies and keeping a maximum outstanding amount per instrument with each bank not to exceed 20% of the total. For derivative financial instruments, management has established limits so that, at any time, the fair value of contracts outstanding is not concentrated with any individual counterparty.

The Group monitors the creditworthiness of its customers to which it grants credit terms in the normal course of business. If certain customers are independently rated, these ratings are used. Otherwise, if there is no independent rating, risk control assesses the customer's credit quality, considering its financial position, past experience, and other factors. The utilization of credit limits is regularly monitored. Sales to customers are primarily settled in cash, which mitigates credit risk. As of December 31, 2024 and 2023, no individual customer represented more than 10% of total trade accounts receivable. Any remaining concentrations of credit risk with respect to trade receivables are limited due to the large number of customers and their dispersion across many geographic areas.

The Group's investments in instruments carried at amortized cost primarily include long-term receivables towards government bodies. As such, they are investments with immaterial credit loss. Any remaining receivable is of low credit risk and is individually not significant. The credit ratings of the investments are monitored for credit deterioration.

The Group has three types of financial assets that are subject to the expected credit loss model:

- Trade receivables for sales of goods and services, as described in Note 7.6.17;
- Debt securities measured at FVOCI, as described in Note 7.6.14.1; and
- Debt investments, primarily long-term receivables, carried at amortized cost, as described in Note 7.6.15 and Note 7.6.18.

The impairment methodology by category of financial assets is further described in each respective note. While cash and cash equivalents are also subject to the impairment requirements of IFRS 9, the identified impairment loss is deemed to be immaterial. The maximum exposure for all financial assets is their carrying amount.

Liquidity risk

Prudent liquidity risk management includes maintaining sufficient cash and cash equivalents, short-term deposits and marketable securities, the availability of funding from committed credit facilities and the ability to close out market positions. The Group's objective is to maintain a significant cash position and a low debt-to-equity ratio, which ensure adequate financial flexibility. Liquidity management policy is to finance the Group's investments with net cash from operating activities.

Management monitors rolling forecasts of the Group's liquidity reserve based on expected cash flows.

A maturity analysis of interest-bearing loans and borrowings is shown in Note 7.6.14.3.

Capital risk management

The Group's objectives when managing capital are to safeguard the Group's ability to continue as a going concern in order to create value sustainable value, benefits and returns for its stakeholders, as to maintain an optimal capital structure. In order to maintain or adjust its capital structure, the Group may review the amount of dividends paid to shareholders, return capital to shareholders, or issue new shares.

Consistent with other peers in the industry, the Company monitors capital on the basis of the net debt-to-equity ratio. This ratio is calculated as the net financial position of the Company, defined as the difference between total cash position (cash and cash equivalents, short-term deposits, marketable securities and restricted cash, if any) and total financial debt (short-term and long-term debt), divided by total parent company stockholders' equity.

8. Company's financial statements

The accompanying notes are an integral part of these Company's financial statements.

8.3. Notes to Company's financial statements

8.3.1. General

A description of the Company, its activities and group structure are included in the consolidated financial statements, prepared on the basis of accounting policies that conform to IFRS as endorsed by the EU. The Company holds investments in subsidiaries operating in the semiconductor manufacturing industry.

8.3.2. Basis of Presentation

The Company's financial statements have been prepared in accordance with article 9 of Book 2 of the Dutch Civil Code. In accordance with the provisions of article 362 sub 8 of Book 2 of the Dutch Civil code, the accounting policies used are the same as those used in the notes to the consolidated financial statements prepared under IFRS as adopted by the EU, unless otherwise stated. The financial statements were authorized on March 26, 2025.

In accordance with article 362 paragraph 8 of Book 2 of the Dutch Civil Code, the Company has prepared its financial statements in accordance with accounting principles generally accepted in The Netherlands applying the accounting principles as adopted in the consolidated financial statements and further described in detail in the consolidated financial statements Note 7.6.7.

The functional and presentation currency of the Company is the U.S. dollar.

All balances and values are in millions of U.S. dollars, except as otherwise noted.

The accounting policies adopted are consistent with those of the previous financial year.

8.3.3. Summary of material accounting policies

Subsidiaries

Subsidiaries are all entities over which the Company has control. The Company controls an entity when the Company is exposed to, or has rights to, variable returns from its involvement with the entity and has the ability to affect those returns through its power to direct the activities of the entity.

Valuation of Subsidiaries

Investments in subsidiaries are stated at net asset value as the Company effectively controls the operational and financial activities of these investments. The net asset value is determined on the basis of the IFRS accounting principles applied by the Company in its consolidated financial statements.

Amounts due from group companies are stated initially at fair value and subsequently at amortized cost. Amortized cost is determined using the effective interest rate. The Company recognizes a credit loss for financial assets (such as a loan) based on an expected credit loss (ECL) model based first on estimated credit losses expected to occur in the coming twelve months and lifetime expected credit losses after a significant decrease in credit quality or when the simplified model can be used. For intercompany receivables the ECL would be applicable as well, however this could cause differences between equity in the consolidated and separate financial statements. For this reason, the Company elected to eliminate these differences through the respective receivable account in the separate financial statements.

For intercompany financial guarantees issued by the Company, there is no expected default and therefore the financial guarantees are not recognized. Guarantees given by the Company to its subsidiaries are further described in Note 8.3.19.

8.3.4. Leases

Maturities of lease liabilities are as follows:

Investments held in debt securities

As of December 31, 2024, the Company held \$2,433 million of U.S. Treasury debt securities. The debt securities have an average rating of Aaa/AA+/AA+ from Moody's, S&P and Fitch, respectively, with an average maturity of 1.4 years. The debt securities were reported as current assets on the line "Other current financial assets" on the Company's statement of financial position as of December 31, 2024, since they represented investments of funds available for current operations.

Marketable securities totaling \$1,000 million at principal amount were transferred to financial institutions as part of short-term securities lending transactions, in compliance with corporate policies. The Company, acting as the securities lender, does not hold any collateral in this unsecured securities lending transaction. The Company retains effective control on the transferred securities.

The Company applies a forward-looking expected credit loss (ECL) approach on all debt financial assets not held at FVPL. For debt securities at FVOCI, the ECL is based on the 12-month expected credit loss basis. The 12-month ECL is the portion of lifetime ECLs that results from default events on a financial instrument that are possible within 12 months after the reporting date. Since the Company's quoted debt instruments at FVOCI comprise solely U.S Treasury debt securities, the Company has considered that the ECLs on these investments are insignificant.

Investments held in equity securities

The Company irrevocably elected to measure at FVOCI unquoted equity securities for an aggregate value of \$20 million (December 31, 2023: \$21 million). Since these are strategic investments, the Company considers this classification, which implies that changes in fair value are not subsequently recycled to earnings, to be more relevant.

Financial assets include the following:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Quoted securities:		
Debt securities issued by the U.S. Treasury	2,433	1615
Unquoted equity securities:		
Unquoted equity securities	20	21
Embedded call option - Senior unsecured convertible bonds issued on August 4, 2020 (Tranche A)	—	14
Embedded call option - Senior unsecured convertible bonds issued on August 4, 2020 (Tranche B)	2	34
Total	2,455	1684

Financial assets are denominated in the following currencies:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Euro	6	10
U.S. dollars	2,449	1,674
Total	2,455	1,684

For further details on Group's financial assets, see Note 7.6.14.1 of the consolidated financial statements of the Group.

8.3.7.2. Other financial liabilities

Movements on other financial liabilities are presented as follows:

In millions of U.S. dollars	December 31, 2024
Beginning of the year	522
Change in fair value of the embedded conversion option of the senior unsecured convertible bonds issued on August 4, 2020, Tranche A	(225)
Change in fair value of the embedded conversion option of the senior unsecured convertible bonds issued on August 4, 2020, Tranche B	(252)
Lease payments	(6)
End of the year	39
Less current portion	(37)
Non-current portion	2

Since August 2023 and August 2024 for Tranche A and Tranche B convertible bonds, respectively, the bondholders have full conversion rights. Consequently, Tranche A and Tranche B were reported on the current portion.

In millions of U.S. dollars	December 31, 2023
Beginning of the year	275
Change in fair value of the embedded conversion option of the senior unsecured convertible bonds issued on August 4, 2020, Tranche A	119
Change in fair value of the embedded conversion option of the senior unsecured convertible bonds issued on August 4, 2020, Tranche B	130
Lease payments	(2)
End of the year	522
Less current portion	(515)
Non-current portion	7

Financial liabilities include the following:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Embedded conversion option - Senior unsecured convertible bonds issued on August 4, 2020 (Tranche A)	4	229
Embedded conversion option - Senior unsecured convertible bonds issued on August 4, 2020 (Tranche B)	29	281
Lease financial liabilities	6	12
Total financial liabilities	39	522
Total current	(37)	(515)
Total non-current	2	7

8.3.8. Short-term deposits

To optimize the return yield on its short-term investments, the Company invested in short-term deposits as follows:

	December 31, 2024	December 31, 2023
Short-term deposits beyond three months and below one year	1,450	1,225
Deposits at call with banks and money market funds	1,345	2,691
Total Short-term deposits	2,795	3,916

Short-term deposits are composed of deposits at call with banks, money market funds and short-term deposits with maturity beyond three months and below one year with no significant risk of changes in fair value. Deposits at call with banks and money market funds are reported as cash and cash equivalents in the consolidated statement of financial position, in compliance with IFRS. Cash and cash equivalents of the Group are further described in Note 7.6.7.8 and Note 7.6.19 of the Group's consolidated financial statements.

8.3.9. Cash

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Cash at bank and on hand	406	146

8.3.10. Group companies interest-bearing short-term loans

Group companies short-term loans consisted of the following:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
STMicroelectronics Ltd. (Israel)		
Loan due 2025 bearing interest at 3-month SOFR	4	—

* The share capital of STMicroelectronics is denominated in Euros and the period-end balance is translated into U.S. dollars at the year-end exchange rate (Euro/USD 1.1051). The translation differences are taken to retained earnings.

The authorized share capital of the Company is €1,810 million consisting of 1,200,000,000 common shares and 540,000,000 preference shares, each with a nominal value of €1.04. As of December 31, 2024 the number of common shares issued was 911,281,920 shares (December 31, 2023: 911,281,920).

As of December 31, 2024, the number of shares of common stock outstanding was 898,175,408 shares (December 31, 2023: 902,771,081 shares).

The Euros equivalent of the issued share capital as of December 31, 2024 amounts to €947,733,197 (2023: €947,733,197). For the changes in issued and paid-in-capital, additional paid-in-capital and retained earnings, see the Group's consolidated financial statements.

The cumulative amount of legal reserves as of December 31, 2024 is split as follows: \$1,188 million of capitalized development expenditures and internally developed software expenditures, \$400 million of subsidiaries non distributable reserves, \$328 million of currency translation adjustment gain.

The cumulative amount of legal reserves as of December 31, 2023 is split as follows: \$1,114 million of capitalized development expenditures and internally developed software expenditures, \$425 million of subsidiaries non distributable reserves, \$564 million of currency translation adjustment gain and \$33 million unrealized gain on derivatives.

Treasury shares

As of December 31, 2024, the Company owned 13,106,512 shares classified as treasury shares in the Company's statement of equity compared to 8,510,839 shares as of December 31, 2023.

The treasury shares have been originally designated for allocation under the Company's share-based remuneration programs. As of December 31, 2024, 86,565,271 of these treasury shares were transferred

to employees under the Company's share-based remuneration programs, of which 5,542,756 in the year ended December 31, 2024. 6,502,300 shares during the year ended December 31, 2023.

On July 1, 2021, the Company announced the launch of a share buy-back program of up to \$1,040 million to be executed within a three-year period. Under this share buy-back program, the Company purchased approximately 4.1 million shares of its outstanding common stock for a total of \$175 million during the first half of 2024, from January until the program concluded in June. During 2023, the Company purchased approximately 7.6 million shares of its outstanding common stock for \$346 million under this program. During 2022, the Company purchased approximately 9.2 million shares of its outstanding common stock for \$346 million under this program.

On June 21, 2024, the Company announced the launch of a new share buy-back plan comprising two programs of up to \$1,100 million to be executed within a three-years period. Since the program's inception in July 2024, the Company has repurchased approximately 6 million shares of its common stock for a total amount of \$184 million.

Non Distributable Reserve

The amount of the non-distributable reserve was \$2,901 million and \$3,183 million in the year 2024 and 2023, respectively, and it represents the amount of issued and paid-in capital and legal reserves of the Company.

8.3.13. Other payables and accrued liabilities

Other payables and accrued liabilities consisted of:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Dividends payable to Shareholders	88	54
Trade payable	3	2
Other liabilities	14	6
Total other payables and accrued liabilities	105	62

8.3.14. Interest-bearing loans and borrowings

Interest-bearing loans and borrowings consisted of the following:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Funding program loans from European Investment Bank ("EIB"):		
6.19% due 2034, floating interest rate at Secured Overnight Financing Rate +0.939%	300	—
Dual tranche senior unsecured convertible bonds:		
Zero-coupon, due 2025 (Tranche A)	742	730
Zero-coupon, due 2027 (Tranche B)	715	702
Total interest bearing loans and borrowings	1,757	1,432
Total current	1,487	1,432
Total non-current	270	—

Movements on interest-bearing loans and borrowings are presented as follows:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Balance at beginning of the year	1,432	1,407
Amortization of issuance costs	1	1
Amortization of discounted value	24	24
Loans from European Investment Bank ("EIB")	300	—
Balance at the end of the year	1,757	1,432
Out of which long-term	270	—

On August 4, 2020, the Company issued \$1,500 million in principal amount of dual tranche senior unsecured convertible bonds (Tranche A for \$750 million and Tranche B for \$750 million), due 2025 and 2027, respectively. Tranche A bonds were issued at 105.8% as zero-coupon bonds while Tranche B bonds were issued at 104.5% as zero-coupon bonds. The conversion price at issuance was \$43.62 for Tranche A, equivalent to a 47.5% conversion premium and \$45.10 for Tranche B, equivalent to a 52.5% conversion premium. These conversion features correspond to an equivalent of 4,585 shares per each Tranche A bond \$200,000 par value and an equivalent of 4,435 shares per each Tranche B bond \$200,000 par value. The bonds are convertible by the bondholders or are callable by the issuer upon certain conditions, on a net-share settlement basis, except if the issuer elects a full-cash or full-share conversion as an alternative settlement. The net proceeds from the bond offering were \$1,567 million, after deducting issuance costs payable by the Group.

The issuer's call option and the holder's conversion option have been identified as embedded non-equity derivative instruments, resulting in the recognition of the options separately from the debt host contract. Upon initial recognition, the derivatives were measured at fair value based on the income approach, the debt being determined as a residual amount of the \$1.5 billion total proceeds. The value of the issuer's call option was deemed to be nil at initial recognition. The value of the holder's conversion option was estimated at \$219 million at issuance date, which determined the initial recognition of the liability component at \$1,358 million before allocation of issuance costs. The fair value measurement of the embedded derivative instruments corresponded to a Level 3 fair value hierarchy measurement. The Company elected to allocate issuance costs, totaling \$10 million, to the debt component. The debt was subsequently measured at amortized cost using the effective interest method.

Starting August 2023 and August 2024 for Tranche A and Tranche B convertible bonds, respectively, the bondholders have full conversion rights. Consequently, for both tranches, non-equity embedded derivative instruments were reported on the line Other current financial assets for an amount of \$2 million, on the line Other current financial liabilities for an amount of \$33 million and on the line Interest-bearing loans and borrowings – current portion for an amount of \$1,457 million, respectively, of the consolidated statement of financial position as of December 31, 2024.

Fair values

In millions of U.S. dollars	Carrying amount		Fair value	
	December 31, 2024	December 31, 2023	December 31, 2024	December 31, 2023
Financial assets				
Other receivables and assets	52	34	52	34
Quoted financial instruments	2,433	1,615	2,433	1,615
Unquoted equity securities	20	21	20	21
Embedded call option - Senior unsecured convertible bonds issued on August 4, 2020 (Tranche A)	—	14	—	14
Embedded call option - Senior unsecured convertible bonds issued on August 4, 2020 (Tranche B)	2	34	2	34
Cash	406	146	406	146
Financial liabilities				
Interest-bearing loans and borrowings (excluding senior unsecured convertible bonds)	300	—	300	—
Lease liabilities	6	11	6	11
Other payables and accrued liabilities	105	62	105	62
Senior unsecured convertible bonds issued on August 4, 2020 ⁽¹⁾	1,457	1,432	1,442	1,814
Embedded conversion option - Senior unsecured convertible bonds issued on August 4, 2020 (Tranche A)	4	229	4	229
Embedded conversion option - Senior unsecured convertible bonds issued on August 4, 2020 (Tranche B)	29	281	29	281

(1) The carrying amount of the senior unsecured convertible bonds issued on August 4, 2020 and outstanding as of December 31, 2024 and December 31, 2023 corresponds to the liability component only, since, at initial recognition, an amount of \$219 million was separately recognized as embedded derivative financial instruments. The fair value of the senior convertible bonds includes the fair value of all embedded derivatives.

8.3.15. Other non-current liabilities

Other non-current liabilities consisted of the following:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Pension liability against former employees	3	3
Other non-current liabilities	1	1
Total	4	4

8.3.16. Guarantees and contingencies

Guarantees given by the Company to its affiliates for the benefit of third parties amounted to approximately \$1,508 million as of December 31, 2024 (2023: \$1,727 million), out of which STMicroelectronics Finance B.V.'s obligation relates to three credit facilities with EIB and two credit facilities with CDP SpA.

EIB facilities

The first credit facility, signed in August 2017, is a €500 million loan, in relation to R&D and capital expenditures in the EU, fully drawn in Euros, of which \$233 million was outstanding as of December 31, 2024 (December 31, 2023: \$303 million). The second one, signed in 2020, is a €500 million credit facility agreement to support R&D and capital expenditure programs in Italy and France. It was fully drawn in Euros in 2021, representing \$364 million outstanding as of December 31, 2024 (December 31, 2023: \$442 million). In 2022, the Group signed a third long-term amortizing credit facility with EIB of €600 million. Of this amount, €300 was withdrawn in Euros in 2022, and \$300 million was withdrawn in U.S dollars during 2024, representing and outstanding balance of \$581 million as of December 31, 2024 (December 31, 2023: \$332 million).

CDP SpA facilities

The first credit facility, signed in 2021, is a €150 million loan, fully drawn in Euros, of which \$65 million were outstanding as of December 31, 2024 (December 31, 2023: \$97 million). The second one, signed in 2022, is a €200 million loan, fully drawn in Euros, of which \$143 million was outstanding as of December 31, 2024 (December 31, 2023: \$187 million).

As from August 22, 2013, the Company assumes joint and several liabilities for all debts arising from legal acts for STMicroelectronics International N.V., STMicroelectronics Finance II N.V. and STMicroelectronics Finance B.V., all in accordance with article 403 of Book 2 of the Dutch Civil Code.

There is no other type of contingencies as of December 31, 2024 and 2023.

8.3.17. General and administrative expenses

General and administrative expenses are the administrative costs related to the operations of the holding company, which consisted of the following:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Employees benefits	(6)	(7)
Amortization	(6)	(6)
Depreciation	(1)	(4)
Insurance	(13)	(10)
Other	(7)	(2)
Total	(33)	(29)

The average number of persons employed by the Company during the year ended December 31, 2024 was 18 out of which 7 outside The Netherlands (2023: 17 out of which 8 outside The Netherlands).

8.3.18. Finance income

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Change in fair value of the call option of Tranche A convertible bonds issued on August 4, 2020	—	1
Change in fair value of the call option of Tranche B convertible bonds issued on August 4, 2020	—	14
Change in fair value of the conversion option of Tranche A convertible bonds issued on August 4, 2020	225	—
Change in fair value of the conversion option of Tranche B convertible bonds issued on August 4, 2020	252	—
Interest income on quoted debt securities	63	15
Interest income on group receivable short-term loans	235	177
Other finance income	219	203
Total finance income	994	410

As described in Note 8.3.7 the change in fair value of the non-equity derivative instruments corresponding to the bondholders' conversion option and the issuer's call option embedded in the unsecured senior convertible bonds issued on August 4, 2020, generated a gain of \$477 million and an expense of \$46 million respectively, for the year ended December 31, 2024 compared a loss of \$249 million and an income of \$15 million respectively, for the year ended December 31, 2023.

8.3.19. Finance cost

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Interest on Senior Bonds	(24)	(24)

Change in fair value of the conversion option of Tranche A convertible bonds issued on August 4, 2020	—	(119)
Change in fair value of the conversion option of Tranche B convertible bonds issued on August 4, 2020	—	(130)
Change in fair value of the call option of Tranche A convertible bonds issued on August 4, 2020	(14)	—
Change in fair value of the call option of Tranche B convertible bonds issued on August 4, 2020	(32)	—
Interests on long-term loans and borrowings	(18)	—
Interest expenses on group companies short-term notes payable	(3)	(3)
Other finance costs	(2)	(3)
Total finance cost	(94)	(280)

8.3.20. Other income

Other income consisted of the following:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Net foreign exchange gain	46	4
Total other income	46	4

8.3.21. Other expenses

Other expenses consisted of the following:

In millions of U.S. dollars	December 31, 2024	December 31, 2023
Loss on sale of financial Investments	(1)	—
Other expenses	(2)	—
Total other expense	(3)	—

8.3.22. Contractual obligations

The Company's contractual obligations as of December 31, 2024 were as follows:

In millions of U.S. dollars	Total	2025	2026	2027	2028	2029	There- after
Senior convertible bonds	1,500	750	—	750	—	—	—
Loans from European Investment Bank	300	30	30	30	30	30	150
Pension obligations	3	—	—	—	—	—	3
Total	1,803	780	30	780	30	30	153

(1) Starting August 2023 and August 2024 for Tranche A and Tranche B convertible bonds, respectively, the bondholders will have full conversion rights. The table reports the repayment obligation based on the original contractual maturity of each Tranche (2025 and 2027 for Tranche A and Tranche B, respectively).

8.3.23. Related party transactions

There were no material transactions with significant related parties during the years ended December 31, 2024 and 2023.

Remuneration to managing board and supervisory board members

For details on the remuneration to the Managing Board and Supervisory Board members, see the consolidated financial statements of the Company (Note 7.6.35).

8.3.24. Auditors' fees

The following audit fees were allocated to the period:

In thousands of U.S. dollars	December 31, 2024	December 31, 2023
Audits of consolidated and statutory financial statements	5,775	4,926
Other assurance services	1,236	546
Non-audit services	7	—
Total	7,018	5,472

The fees listed above relate only to the procedures applied to the Company and its consolidated group entities by Ernst & Young. The procedures were applied by audit firm's member of the EY network. In 2024, the fees related to services provided by Ernst & Young Accountants LLP for the audit of the statutory annual accounts totaled \$180,705 (\$172,095 in 2023).

8.3.25. Proposed cash dividend

Upon the proposal of the Managing Board, the Supervisory Board will propose to the 2025 AGM in line with the Company's Dividend Policy, to declare a cash dividend of US\$0.36 per outstanding share of the Company's common stock, to be distributed in quarterly installments of US\$0.09 in each of the second, third and fourth quarter of 2025 and first quarter of 2026 to shareholders of record in the month of each quarterly payment, as further described in the General Meeting of Shareholders agenda and explanatory notes thereto.

9. Other information

9.1. Auditors' report

The report of the auditors, EY Accountants B.V., is presented on the following pages in this annual report.

9.2. Appropriation of results – provisions in Company's Articles of Association

The Supervisory Board, upon the proposal of the Managing Board, is allowed to allocate net profit to a reserve fund. The Articles of Association provide that the net result for the year, after deduction of (i) any amount to set up and maintain reserves required by Dutch Law and the Articles of Association, (ii) if any of our preference shares are issued and outstanding, the dividend to be paid to the holders of preference shares and (iii) the aforementioned allocation to the reserve fund, is subject to the disposition by the General Meeting of Shareholders.

In the case that a net loss for the year exceeds retained earnings, no dividend payments are allowed until the loss has been recovered from net profit(s) in future years.

9.3. Branches

The Company has a branch in Switzerland, located at 39 Chemin du Champ des Filles, 1228 Plan-les-Ouates, Geneva.

Independent auditor's report

To: the shareholders and supervisory board of STMicroelectronics N.V.

Report on the audit of the financial statements 2024 included in the annual report

Our opinion

We have audited the accompanying financial statements for the financial year ended 31 December 2024 of STMicroelectronics N.V. based in Amsterdam, the Netherlands. The financial statements comprise the consolidated financial statements and the company financial statements.

In our opinion:

- The consolidated financial statements give a true and fair view of the financial position of STMicroelectronics N.V. as at 31 December 2024 and of its result and its cash flows for 2024 in accordance with International Financial Reporting Standards as adopted in the European Union (EU-IFRSs) and with Part 9 of Book 2 of the Dutch Civil Code
- The company financial statements give a true and fair view of the financial position of STMicroelectronics N.V. as at 31 December 2024 and of its result for 2024 in accordance with Part 9 of Book 2 of the Dutch Civil Code

The consolidated financial statements comprise:

- The consolidated statement of financial position as 31 December 2024
- The following statements for 2024: the consolidated income statement, the consolidated statements of comprehensive income, changes in equity and cash flows
- The notes comprising material accounting policy information and other explanatory information

The company's financial statements comprise:

- The company's statement of financial position as at 31 December 2024
- The company's income statement for 2024
- The notes comprising a summary of the accounting policies and other explanatory information

Basis for our opinion

We conducted our audit in accordance with Dutch law, including the Dutch Standards on Auditing. Our responsibilities under those standards are further described in the Our responsibilities for the audit of the financial statements section of our report.

We are independent of STMicroelectronics N.V. in accordance with the EU Regulation on specific requirements regarding statutory audit of public-interest entities, the Wet toezicht accountantsorganisaties (Wta, Audit firms supervision act), the Verordening inzake de onafhankelijkheid van accountants bij assurance-opdrachten (ViO, Code of Ethics for Professional Accountants, a regulation with respect to independence) and other relevant independence regulations in

the Netherlands. Furthermore we have complied with the Verordening gedrags- en beroepsregels accountants (VGBA, Dutch Code of Ethics for professional accountants).

We believe the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Information in support of our opinion

We designed our audit procedures in the context of our audit of the financial statements as a whole and in forming our opinion thereon. The following information in support of our opinion and any findings were addressed in this context, and we do not provide a separate opinion or conclusion on these matters.

Our understanding of the business

STMicroelectronics N.V. (“the company”, and, together with its consolidated subsidiaries, “the group”) is a global semiconductor manufacturer operating in a broad range of markets. We paid specific attention in our audit to a number of areas driven by the operations of the group and our risk assessment.

We determined materiality and identified and assessed the risks of material misstatement of the financial statements, whether due to fraud or error in order to design audit procedures responsive to those risks and to obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion.

Materiality

Materiality	USD 90 million (2023: USD 230 million)
Benchmark applied	5% (rounded) of adjusted profit before income tax
Explanation	Based on our professional judgment we have considered earnings-based measures as the appropriate basis to determine materiality. We initially determined our materiality based on the US GAAP pretax income figures, which didn't include the convertible bonds results. We consider profit before tax, adjusted for the accounting of the convertible bonds to be the most relevant benchmark given the nature of the business, the characteristics of the company and the perceived financial information needs of the users of the financial statements. The convertible bonds results are disclosed in note 7.6.30 and 7.6.31, resulting in a total adjustment of USD 407 million.

We have also taken into account misstatements and/or possible misstatements that in our opinion are material for the users of the financial statements for qualitative reasons.

We agreed with the supervisory board that misstatements in excess of USD 4.5 million, which are identified during the audit, would be reported to them, as well as smaller misstatements that in our view must be reported on qualitative grounds.

Scope of the group audit

STMicroelectronics N.V. is at the head of a group of entities. The financial information of this group is included in the financial statements.

We are responsible for planning and performing the group audit to obtain sufficient appropriate audit evidence regarding the financial information of the entities or business units within the group as a basis for forming an opinion on the financial statements. We are also responsible for the direction, supervision, review and evaluation of the audit work performed for purposes of the group audit. We bear the full responsibility for the auditor's report.

Based on our understanding of the group and its environment, the applicable financial framework and the group's system of internal control, we identified and assessed risks of material misstatement of the financial statements and the significant accounts and disclosures. Based on this risk assessment, we determined the nature, timing and extent of audit work performed, including the entities or business units within the group (components) at which to perform audit work. For this determination we considered the nature of the relevant events and conditions underlying the identified risks of material misstatements for the financial statements, the association of these risks to components and the materiality or financial size of the components relative to the group. We communicated the audit work to be performed and identified risks through instructions for component auditors as well as requesting component auditors to communicate matters related to the financial information of the component that is relevant to identifying and assessing risks.

We have:

- performed audit procedures ourselves at parent company STMicroelectronics N.V., located in the Netherlands which was assigned a full scope;
- used the work of other EY auditors when auditing entities in Switzerland, France, Singapore and Italy which were assigned a full scope;
- used the work of other EY auditors when auditing entities in US, Japan, Malaysia, Malta, Philippines and China which were assigned a specific scope;

This resulted in a coverage of 99,9% of revenue, 97,9% of COGS and 97,1% of total assets.

For other components, we performed analytical procedures to corroborate that our risk assessment and scoping remained appropriate throughout the audit.

We performed site visits to EY Switzerland, EY Singapore and EY Malaysia to meet with local managing board and component teams, observe the component operations, discuss the group risk assessment and the risks of material misstatements for the related entities of these component teams.

We reviewed and evaluated the adequacy of the deliverables from component auditors and reviewed key working papers for selected components to address the risks of material misstatement. We held planning meetings, key meetings required based on circumstances and we attended closing meetings with local managing boards and component teams for all full and specific scope components. During these meetings and calls, amongst others, the planning, procedures performed based on risk assessments,

findings and observations were discussed and any further work deemed necessary by the primary or component team was then performed.

By performing the audit work mentioned above at the entities or business units within the group, together with additional work at group level, we have been able to obtain sufficient and appropriate audit evidence about the group's financial information to provide an opinion on the financial statements.

Teaming and use of specialists

We ensured that the audit teams both at group and at component levels included the appropriate skills and competences which are needed for the audit of a listed company in the Semiconductor industry. We included specialists in the areas of IT audit, forensics and income tax and have made use of our own valuations and actuarial experts.

Our focus on climate-related risks and the energy transition

Climate change and the energy transition are high on the public agenda. Issues such as CO2 reduction impact financial reporting, as these issues entail risks for the business operation, the valuation of assets and provisions or the sustainability of the business model and access to financial markets of companies with a larger CO2 footprint. The managing board summarized the STMicroelectronics N.V.'s commitments and obligations and reported in the section 3.3.1.2 and 3.4 of the report of the managing board how STMicroelectronics is addressing climate-related and environmental risks. Furthermore, we refer to section 3.4 of the report of the managing board where the managing board discloses its assessment, and implementation plans in connection to climate-related risks and the effects of energy transition.

As part of our audit of the financial statements, we evaluated the extent to which climate-related risks and the effects of the energy transition and the company's commitments and (constructive) obligations, are taken into account in estimates and significant assumptions. Furthermore, we read the report of the managing board and considered whether there is any material inconsistency between the non-financial information section 3.3.1.2 and 3.4 and the financial statements.

Based on the audit procedures performed, we do not deem climate-related risks to have a material impact on the financial reporting judgements, estimates or significant assumptions as at 31 December 2024.

Our focus on fraud and non-compliance with laws and regulations

Our responsibility

Although we are not responsible for preventing fraud or non-compliance and we cannot be expected to detect non-compliance with all laws and regulations, it is our responsibility to obtain reasonable assurance that the financial statements, taken as a whole, are free from material misstatement, whether caused by fraud or error. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.

Our audit response related to fraud risks

We identified and assessed the risks of material misstatements of the financial statements due to fraud. During our audit we obtained an understanding of the company and its environment and the components of the system of internal control, including the risk assessment process and the managing board's process for responding to the risks of fraud and monitoring the system of internal control and how the supervisory board exercises oversight, as well as the outcomes. We refer to Section 3.2.6 and 3.3.1 of the report of the managing board for managing board's risk assessment after consideration of potential fraud risks.

We evaluated the design and relevant aspects of the system of internal control and in particular the fraud risk assessment, as well as the code of conduct, whistle blower procedures and incident registration. We evaluated the design, the implementation and where considered appropriate, tested the operating effectiveness, of internal controls designed to mitigate fraud risks.

As part of our process of identifying fraud risks, we evaluated fraud risk factors with respect to financial reporting fraud, misappropriation of assets and bribery and corruption in close co-operation with our forensic. We evaluated whether these factors indicate that a risk of material misstatement due to fraud is present.

We incorporated elements of unpredictability in our audit. We also considered the outcome of our other audit procedures and evaluated whether any findings were indicative of fraud or non-compliance.

We addressed the risks related to management override of controls, as this risk is present in all organizations. For these risks we have performed procedures among other things to evaluate key accounting estimates for management bias that may represent a risk of material misstatement due to fraud, in particular relating to important judgment areas and significant accounting estimates as disclosed in Note 7.6.8 to the financial statements. We have also used data analysis to identify and address high-risk journal entries and evaluated the business rationale (or the lack thereof) of significant extraordinary transactions, including those with related parties.

The following fraud risks identified required significant attention during our audit.

Presumed risks of fraud in revenue recognition	
Fraud risk	We presumed that there are risks of fraud in revenue recognition. We evaluated that the risk of side arrangements entered into by the managing board to induce future sales with distributors and without knowledge of the finance department in particular give rise to such risks.
Our audit approach	We describe the audit procedures responsive to the presumed risk of fraud in revenue recognition in the description of our audit approach for the key audit matter revenue recognition.

We considered available information and made enquiries of relevant executives, directors, internal audit, legal, compliance, human resources and regional directors and the supervisory board.

The fraud risk we identified, enquiries and other available information did not lead to specific indications for fraud or suspected fraud potentially materially impacting the view of the financial statements.

Our audit response related to risks of non-compliance with laws and regulations

We performed appropriate audit procedures regarding compliance with the provisions of those laws and regulations that have a direct effect on the determination of material amounts and disclosures in the financial statements. Furthermore, we assessed factors related to the risks of non-compliance with laws and regulations that could reasonably be expected to have a material effect on the financial statements from our general industry experience, through discussions with the managing board, reading minutes, inspection of internal audit and compliance reports, and performing substantive tests of details of classes of transactions, account balances or disclosures. As STMicroelectronics N.V. is a global company, operating in multiple jurisdictions, we also considered the risk of bribery and corruption.

We also inspected lawyers' letters and remained alert to any indication of (suspected) non-compliance throughout the audit. Finally we obtained written representations that all known instances of non-compliance with laws and regulations have been disclosed to us.

Our audit response related to going concern

As disclosed in section 'Critical accounting estimates and judgements' in Note 7.6.8. to the financial statements, the financial statements have been prepared on a going concern basis. When preparing the financial statements, the managing board made a specific assessment of the company's ability to continue as a going concern and to continue its operations for the foreseeable future.

We discussed and evaluated the specific assessment with the managing board exercising professional judgment and maintaining professional skepticism.

We considered whether the managing board's going concern assessment, based on our knowledge and understanding obtained through our audit of the financial statements or otherwise, contains all relevant events or conditions that may cast significant doubt on the company's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion.

Based on our procedures performed, we did not identify material uncertainties about going concern. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause a company to cease to continue as a going concern.

Our key audit matters

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the financial statements. We have communicated the key audit matters to the supervisory board. The key audit matters are not a comprehensive reflection of all matters discussed.

In comparison with previous year, the nature of our key audit matters did not change.

Improper revenue recognition due to side arrangements with distributors	
Risk	<p>As described in Note 7.6.25 to the consolidated financial statements, the company recognized total revenues of USD 13,269 million as of 31 December 2024. The company recognizes revenue from products sold to customers, which includes Original Equipment Manufacturers (OEMs) and distributors, amounting to USD 9,629 million and USD 3,640 million, respectively.</p> <p>Auditing the company's revenue requires significant attention of the audit team, since it is a key financial metric, with a large volume of transactions and multiple market channels. In addition, we consider the risk of side arrangements with distributors not appropriately accounted for as a fraud risk, also as a result of management override of controls. As a result, we considered the risk of improper revenue recognition due to side arrangements with distributors as a key audit matter.</p>
Our audit approach	<p>We obtained an understanding, evaluated the control design and tested the operating effectiveness of controls over the company's revenue recognition process, including the processes to detect side arrangements. Additionally, we inspected and evaluated the managing board's assessment of non-standard terms and conditions, and certifications completed by the company's sales organization.</p> <p>We also performed procedures to evaluate the design and operation of IT processes, including testing of IT general controls and application controls and the data and reports used in the execution of certain controls.</p> <p>Our substantive audit procedures included, among others, circulation of terms and conditions confirmations with selected customers, searching for indications of side arrangements through inquiry and substantive testing procedures, test significant non-automated adjustments to revenue and perform additional inquiries of key members of the commercial managing board. We have evaluated the appropriateness of the company's revenue recognition policies in accordance with IFRS 15 'Revenue from Contracts with Customers' and whether the policies have been applied consistently or whether changes, if any, are appropriate in the circumstances.</p> <p>We also assessed the adequacy of the company's revenue disclosure in the financial statements.</p>
Key observations	<p>We consider that the company's revenue recognition accounting policies were appropriately applied and disclosed in the consolidated financial statements.</p>

Recoverability of deferred tax assets

<p>Risk</p>	<p>As of 31 December 2024, the company recognized net deferred tax assets of USD 226 million. As explained in note 7.6.33 to the consolidated financial statements, the company performs an evaluation of the likelihood that future taxable income will be generated in an amount sufficient to utilize such deferred tax assets prior to their expiration after having considered positive and negative available evidence.</p> <p>Assessing the recognition of and recoverability of deferred tax assets involves significant judgement and estimates, including, among others: the prospective financial information used by the managing board in order to assess future taxable income, transfer pricing policies and the timing of reversal of temporary differences. These assumptions have a high degree of uncertainty and subjectivity, since they are dependent on the outcome of future events. Consequently, we identified this as a key audit matter.</p>
<p>Our audit approach</p>	<p>We obtained an understanding, evaluated the control design, and tested the operating effectiveness of management’s controls around, amongst others: the calculation of the gross amount of deferred tax assets recorded, the preparation of the prospective financial information used to determine the company’s future taxable income and the assessment of valuation allowance needed for deferred tax assets not deemed recoverable.</p> <p>We involved tax professionals to assist with our procedures in evaluating management's weighting of available positive and negative evidence used in their assessment of the realizability of deferred tax assets. Among other procedures, we evaluated the timing of the reversal of the temporary differences and management's prospective financial information used to determine future taxable income and its consistency with current transfer pricing policies. We compared management's projections with the actual results of prior periods, as well as management's consideration of current and expected industry and economic trends.</p> <p>We also evaluated the company’s income tax disclosures included in Note 7.6.33 to the consolidated financial statements in relation to these matters.</p>
<p>Key observations</p>	<p>We consider that the company’s accounting policies related to deferred tax assets were appropriately applied and disclosed in the consolidated financial statements.</p>

Report on other information included in the annual report

The annual report contains other information in addition to the financial statements and our auditor’s report thereon.

Based on the following procedures performed, we conclude that the other information:

- Is consistent with the financial statements and does not contain material misstatements
- Contains the information as required by Part 9 of Book 2 of the Dutch Civil Code for the management report (excluding the sustainability statement) and the other information as required by Part 9 of Book 2 of the Dutch Civil Code: and as required by Sections 2:135b and 2:145 sub-section 2 of the Dutch Civil Code for the remuneration report.

We have read the other information. Based on our knowledge and understanding obtained through our audit of the financial statements or otherwise, we have considered whether the other information contains material misstatements. By performing these procedures, we comply with the requirements of Part 9 of Book 2: and Section 2:135b sub-Section 7 of the Dutch Civil Code and the Dutch Standard 720. The scope of the procedures performed is substantially less than the scope of those performed in our audit of the financial statements.

The Managing Board is responsible for the preparation of the other information, including the management report in accordance with Part 9 of Book 2 of the Dutch Civil Code and other information required by Part 9 of Book 2 of the Dutch Civil Code. The managing board and the supervisory board are responsible for ensuring that the remuneration report is drawn up and published in accordance with Sections 2:135b and 2:145 sub-section 2 of the Dutch Civil Code.

Report on other legal and regulatory requirements and ESEF

Engagement

We were engaged by the supervisory Board as auditor of STMicroelectronics N.V. following our re-appointment at the annual meeting held on 17 June 2020 for the years 2020-2025, and have operated as statutory auditor ever since the financial year 2016.

No prohibited non-audit services

We have not provided prohibited non-audit services as referred to in Article 5(1) of the EU Regulation on specific requirements regarding statutory audit of public-interest entities.

European Single Electronic Reporting Format (ESEF)

STMicroelectronics N.V. has prepared the annual report in ESEF. The requirements for this are set out in the Delegated Regulation (EU) 2019/815 with regard to regulatory technical standards on the specification of a single electronic reporting format (hereinafter: the RTS on ESEF).

In our opinion the annual report prepared in the XHTML format, including the (partially) marked-up consolidated financial statements as included in the reporting package by STMicroelectronics N.V., complies in all material respects with the RTS on ESEF.

The managing board is responsible for preparing the annual report, including the financial statements, in accordance with the RTS on ESEF, whereby the managing board combines the various components into a single reporting package.

Our responsibility is to obtain reasonable assurance for our opinion whether the annual report in this reporting package complies with the RTS on ESEF.

We performed our examination in accordance with Dutch law, including Dutch Standard 3950N, "Assurance-opdrachten inzake het voldoen aan de criteria voor het opstellen van een digitaal verantwoordingsdocument" (assurance engagements relating to compliance with criteria for digital reporting). Our examination included amongst others:

- Obtaining an understanding of the company's financial reporting process, including the preparation of the reporting package
- Identifying and assessing the risks that the annual report does not comply in all material respects with the RTS on ESEF and designing and performing further assurance procedures responsive to those risks to provide a basis for our opinion, including:
 - Obtaining the reporting package and performing validations to determine whether the reporting package containing the Inline XBRL instance document and the XBRL extension taxonomy files, has been prepared in accordance with the technical specifications as included in the RTS on ESEF
 - Examining the information related to the consolidated financial statements in the reporting package to determine whether all required mark-ups have been applied and whether these are in accordance with the RTS on ESEF.

Description of responsibilities regarding the financial statements

Responsibilities of the managing board and the supervisory board for the financial statements

The Managing Board is responsible for the preparation and fair presentation of the financial statements in accordance with EU-IFRSs and Part 9 of Book 2 of the Dutch Civil Code. Furthermore, the managing board is responsible for such internal control as the managing board determines is necessary to enable the preparation of the financial statements that are free from material misstatement, whether due to fraud or error.

As part of the preparation of the financial statements, the managing board is responsible for assessing the company's ability to continue as a going concern. Based on the financial reporting framework mentioned, the managing board should prepare the financial statements using the going concern basis of accounting unless the managing board either intends to liquidate the company or to cease operations, or has no realistic alternative but to do so. The managing board should disclose events and circumstances that may cast significant doubt on the company's ability to continue as a going concern in the financial statements.

The supervisory board is responsible for overseeing the company's financial reporting process.

Our responsibilities for the audit of the financial statements

Our objective is to plan and perform the audit engagement in a manner that allows us to obtain sufficient and appropriate audit evidence for our opinion.

Our audit has been performed with a high, but not absolute, level of assurance, which means we may not detect all material misstatements, whether due to fraud or error during our audit.

Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements. The materiality affects the nature, timing and extent of our audit procedures and the evaluation of the effect of identified misstatements on our opinion.

We have exercised professional judgment and have maintained professional skepticism throughout the audit, in accordance with Dutch Standards on Auditing, ethical requirements and independence requirements. The Information in support of our opinion section above includes an informative summary of our responsibilities and the work performed as the basis for our opinion.

Our audit further included among others:

- Performing audit procedures responsive to the risks identified, and obtaining audit evidence that is sufficient and appropriate to provide a basis for our opinion
- Obtaining an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the company's internal control
- Evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the managing board
- Evaluating the overall presentation, structure and content of the financial statements, including the disclosures
- Evaluating whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation

Communication

We communicate with the supervisory board regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant findings in internal control that we identify during our audit.

In this respect we also submit an additional report to the audit committee of the supervisory board in accordance with Article 11 of the EU Regulation on specific requirements regarding statutory audit of public-interest entities. The information included in this additional report is consistent with our audit opinion in this auditor's report.

We provide the supervisory board with a statement that we have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, related safeguards.

From the matters communicated with the supervisory board, we determine the key audit matters: those matters that were of most significance in the audit of the financial statements. We describe these matters in our auditor's report unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, not communicating the matter is in the public interest.

Eindhoven, 27 March 2025

EY Accountants B.V.

signed by M. Moolenaar

Limited assurance report of the independent auditor on the sustainability statement

To: the shareholders and the supervisory board of STMicroelectronics N.V.

Our conclusion

We have performed a limited assurance engagement on the consolidated sustainability statement for 2024 of STMicroelectronics N.V. based in Amsterdam, the Netherlands in Section 3.4 Sustainability Statement of the accompanying report of the managing board including the information incorporated in the sustainability statement by reference (hereinafter: the sustainability statement).

Based on our procedures performed and the evidence obtained, nothing has come to our attention that causes us to believe that the sustainability statement is not, in all material respects:

- Prepared in accordance with the European Sustainability Reporting Standards (ESRS) as adopted by the European Commission and compliant with the double materiality assessment process carried out by STMicroelectronics N.V. to identify the information reported pursuant to the ESRS
- Compliant with the reporting requirements provided for in Article 8 of Regulation (EU) 2020/852 (Taxonomy Regulation)

Our conclusion has been formed on the basis of the matters outlined in this limited assurance report.

Basis for our conclusion

We have performed our limited assurance engagement on the sustainability statement in accordance with Dutch law, including Dutch Standard 3810N, "Assurance-opdrachten inzake duurzaamheidsverslaggeving" (Assurance engagements relating to sustainability reporting), which is a specified Dutch standard that is based on the International Standard on Assurance Engagements (ISAE) 3000 (Revised), "Assurance engagements other than audits or reviews of historical financial information".

Our assurance engagement was aimed to obtain a limited level of assurance that the sustainability statement is free from material misstatements. The procedures vary in nature and timing from, and are less in extent, than for a reasonable assurance engagement. Consequently, the level of assurance obtained in a limited assurance engagement is substantially lower than the assurance that would have been obtained had a reasonable assurance engagement been performed.

Our responsibilities in this regard are further described in the section "Our responsibilities for the limited assurance engagement on the sustainability statement" of our report.

We are independent of STMicroelectronics N.V. in accordance with the Verordening inzake de onafhankelijkheid van accountants bij assurance-opdrachten (ViO, Code of Ethics for Professional Accountants, a regulation with respect to independence) and other relevant independence regulations in the Netherlands. This includes that we do not perform any activities that could result in a conflict of interest with our independent assurance engagement and we are not involved in the preparation of the sustainability statement, as doing so may compromise our independence. Furthermore, we have complied with the Verordening gedrags- en beroepsregels accountants (VGBA, Dutch Code of Ethics for Professional Accountants). The ViO and VGBA are at least as demanding as the International code of ethics for professional accountants (including International independence standards) of the International Ethics Standards Board for Accountants (the IESBA Code) as relevant to limited assurance engagements on sustainability statements of public interest entities in the European Union.

We believe that the assurance evidence we have obtained is sufficient and appropriate to provide a basis for our conclusion.

Emphasis of matters

The sustainability statement has been prepared in a context of new sustainability reporting standards, requiring entity-specific interpretations and addressing inherent measurement or evaluation uncertainties. In this context, we want to emphasize the following matters:

Emphasis on the most significant uncertainties affecting the quantitative metrics and monetary amounts

We draw attention to Section 3.4.2.1 General basis for preparation (ESRS 2 BP 1 and BP 2), Sources of estimation and outcome uncertainty in the sustainability statement that identifies the quantitative metrics and monetary

amounts that are subject to a high level of measurement uncertainty and discloses information about the sources of measurement uncertainty and the assumptions, approximations and judgements STMicroelectronics N.V. has made in measuring these in compliance with the ESRS.

The comparability of sustainability information between entities and over time may be affected by the lack of historical sustainability information in accordance with the ESRS and by the absence of a uniform practice on which to draw, to evaluate and measure this information. This allows for the application of different, but acceptable, measurement techniques, especially in the initial years.

Emphasis on the double materiality assessment process

We draw attention to Section 3.4.2.4 Impact, risk and opportunity management in the sustainability statement. This disclosure explains future improvements in the ongoing due diligence and double materiality assessment process, including robust engagement with affected stakeholders. Due diligence is an on-going practice that responds to and may trigger changes in STMicroelectronics N.V.'s strategy, business model, activities, business relationships, operating, sourcing and selling contexts. The double

materiality assessment process requires STMicroelectronics N.V. to make key judgments and use thresholds and may also be impacted in time by sector-specific standards to be adopted. Therefore, the sustainability statement may not include every impact, risk and opportunity or additional entity-specific disclosure that each individual stakeholder (group) may consider important in its own particular assessment.

Emphasis on the GHG emissions related to the use of sold products

We draw attention to Section 3.4.3.1 Climate change (E1), Gross scope 3 GHG emissions in the sustainability statement. The disclosure in this section explains why STMicroelectronics N.V. is unable to make reasonable assumptions for estimating the amount of GHG emissions for Scope 3.11, which is a significant category among STMicroelectronics N.V.'s Scope 3 emissions.

Our conclusion is not modified in respect of these matters.

Comparative information not assured

Sustainability information for 2023 and prior years included in the sustainability statement, has not been part of this limited assurance engagement. Consequently, we do not provide any assurance on the comparative information and thereto related disclosures in the sustainability statement for 2023 and prior years.

Our conclusion is not modified in respect of this matter.

Limitation to the scope of our assurance engagement

In reporting forward-looking information in accordance with the ESRS, the managing board describes the underlying assumptions and methods of producing the information, as well as other factors that provide evidence that it reflects the actual plans or decisions made by STMicroelectronics N.V. (actions).

Forward-looking information relates to events and actions that have not yet occurred and may never occur.

The actual outcome is likely to be different since anticipated events frequently do not occur as expected.

We do not provide assurance on the achievability of forward-looking information.

Our conclusion is not modified in respect of this matter.

Responsibilities of the managing board and the supervisory board for the sustainability statement

The managing board is responsible for the preparation of the sustainability statement in accordance with the ESRS, including the double materiality assessment process carried out by STMicroelectronics N.V. as the basis for the sustainability statement and disclosure of material impacts, risks and opportunities in accordance with the ESRS. As part of the preparation of the sustainability statement, the managing board is responsible for compliance with the reporting requirements provided for in Article 8 of Regulation (EU) 2020/852 (Taxonomy Regulation).

The managing board is also responsible for selecting and applying additional entity-specific disclosures to enable users to understand the company's sustainability-related impacts, risks or opportunities and for determining that these additional entity-specific disclosures are suitable in the circumstances and in accordance with the ESRS.

Furthermore, the managing board is responsible for such internal control as it determines is necessary to enable the preparation of the sustainability statement that is free from material misstatement, whether due to fraud or error.

The supervisory board is responsible for overseeing the sustainability reporting process including the double materiality assessment process carried out by STMicroelectronics N.V.

Our responsibilities for the limited assurance engagement on the sustainability statement

Our responsibility is to plan and perform the limited assurance engagement in a manner that allows us to obtain sufficient and appropriate assurance evidence for our conclusion.

We apply the applicable quality management requirements pursuant to the Nadere voorschriften kwaliteitsmanagement (NVKM, regulations for quality management) and the International Standard on Quality Management (ISQM) 1, and accordingly maintain a comprehensive system of quality management including documented policies and procedures regarding compliance with ethical requirements, professional standards and other relevant legal and regulatory requirements.

Our limited assurance engagement included amongst others:

- Performing inquiries and an analysis of the external environment and obtaining an understanding of relevant sustainability themes and issues, the characteristics of STMicroelectronics N.V., its activities and the value chain and its key intangible resources in order to assess the double materiality assessment process carried out by STMicroelectronics N.V. as the basis for the sustainability statement and disclosure of all material sustainability-related impacts, risks and opportunities in accordance with the ESRS
- Obtaining through inquiries a general understanding of the internal control environment, STMicroelectronics N.V.'s processes for gathering and reporting entity-related and value chain information, the information systems and STMicroelectronics N.V.'s risk assessment process relevant to the preparation of the sustainability statement and for identifying STMicroelectronics N.V.'s activities, determining eligible and aligned economic activities and prepare the disclosures provided for in Article 8 of Regulation (EU) 2020/852 (Taxonomy Regulation), without obtaining assurance information about the implementation or testing the operating effectiveness of controls
- Determining the nature and extent of the procedures to be performed to confirm our understanding of the reporting processes at corporate and local level. For this, the nature, extent and/or risk profile of these sites are decisive. Based thereon we selected the AMK and Muar sites to visit. The visits to AMK and Muar are aimed at, on a local level, obtaining understanding of the control environment and reporting processes to corporate level related to sustainability information

- Assessing the double materiality assessment process carried out by STMicroelectronics N.V. and identifying and assessing areas of the sustainability statement, including the disclosures provided for in Article 8 of Regulation (EU) 2020/852 (Taxonomy Regulation), where misleading or unbalanced information or material misstatements, whether due to fraud or error, are likely to arise (selected disclosures). Designing and performing further assurance procedures aimed at assessing that the sustainability statement is free from material misstatements responsive to this risk analysis
- Considering whether the description of the double materiality assessment process in the sustainability statement made by the managing board appears consistent with the process carried out by STMicroelectronics N.V.
- Performing analytical review procedures on quantitative information in the sustainability statement, including consideration of data and trends
- Assessing whether STMicroelectronics N.V.'s methods for developing estimates are appropriate and have been consistently applied for selected disclosures. We considered data and trends, however our procedures did not include testing the data on which the estimates are based or separately developing our own estimates against which to evaluate the managing board's estimates
- Analyzing, on a limited sample basis, relevant internal and external documentation available to STMicroelectronics N.V. (including publicly available information or information from actors throughout its value chain) for selected disclosures
- Reading the other information in the annual report to identify material inconsistencies, if any, with the sustainability statement
- Considering whether the disclosures provided to address the reporting requirements provided for in Article 8 of Regulation (EU) 2020/852 (Taxonomy Regulation) for each of the environmental objectives, reconcile with the underlying records of STMicroelectronics N.V. and are consistent or coherent with the sustainability statement, appear reasonable, in particular whether the eligible economic activities meet the cumulative conditions to qualify as aligned and whether the technical screening criteria are met, and whether the key performance indicators disclosures have been defined and calculated in accordance with the Taxonomy reference framework, and comply with the reporting requirements provided for in Article 8 of Regulation (EU) 2020/852 (Taxonomy Regulation), including the format in which the activities are presented
- Considering the overall presentation, structure and fundamental qualitative characteristics of information (relevance and faithful representation: complete, neutral and accurate) reported in the sustainability statement, including the reporting requirements provided for in Article 8 of Regulation (EU) 2020/852 (Taxonomy Regulation)
- Considering, based on our limited assurance procedures and evaluation of the evidence obtained, whether the sustainability statement as a whole, is free from material misstatements and prepared in accordance with the ESRS

Communication

We communicate with the supervisory board regarding, among other matters, the planned scope and timing of the assurance engagement and significant findings that we identify during our assurance engagement.

Amsterdam, 27 March 2025

Appendix 11.4 IRO tables (SBM-3)

The following tables list the IROs we have identified and assessed as material in our 2024 DMA, including programs or dedicated actions and (entity-specific) targets, we have in place to address such IROs.

E1 – Climate change mitigation							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ⁽¹⁾ or inherent ⁽²⁾ basis	ST response	Targets
Negative impact on the environment, due to GHG emissions linked to our activities, contributing to climate change	Negative impact	Actual	Own operations	Short term	Residual basis	ST's carbon neutrality program	We aim to achieve a 20% overall reduction in absolute scope 1 and 2 emissions by 2030 vs 2024. We aim to abate at least 90% of our CAPG emissions by 2030 (entity-specific).
Negative impact on the environment, due to GHG emissions linked to suppliers' activities, contributing to climate change	Negative impact	Actual	Upstream	Short term	Residual basis	ST's carbon neutrality program	We aim to achieve a 10% reduction in our Scope 3 upstream GHG emissions by 2030, and a 20% reduction by 2035, vs 2024.
Negative impact on the environment, due to GHG emissions linked to subcontractors' activities, contributing to climate change	Negative impact	Actual	Upstream	Short term	Residual basis	ST's carbon neutrality program	
Negative impact on the environment, due to GHG emissions linked to distributors and customers activities, contributing to climate change	Negative impact	Actual	Downstream	Short term	Residual basis	ST's third-party management (actions)	No target in place

E1 – Climate change mitigation							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ⁽¹⁾ or inherent ⁽²⁾ basis	ST response	Targets
Risk of not delivering on carbon neutrality roadmap commitments (Poor GHG emissions performance) leading to reduced stakeholders' engagement (customers, investors and talents), company reputation and increased need for offsetting	Transition Risk	Potential	Own operations	Long term	Inherent basis	ST's carbon neutrality program	We aim to achieve a 20% overall reduction in absolute scope 1 and 2 emissions by 2030 vs 2024. We aim to abate at least 90% of our CAPG emissions by 2030 (entity-specific).
Risk of not being able to influence suppliers to deliver on their carbon neutrality roadmap commitments affecting ST's scope 3 performance	Transition Risk	Potential	Upstream	Long term	Inherent basis	ST's carbon neutrality program	We aim to achieve a 10% reduction in our Scope 3 upstream GHG emissions by 2030, and a 20% reduction by 2035, vs 2024.
Risk of not being able to influence subcontractors to deliver on their carbon neutrality roadmap commitments affecting ST's scope 3 performance	Transition Risk	Potential	Upstream	Long term	Inherent basis	ST's carbon STRike program (procurement)	
Risk of not being able to influence distributors and customers to deliver on their carbon neutrality roadmap commitments affecting ST's scope 3 performance	Transition Risk	Potential	Downstream	Long term	Inherent basis	ST's third-party management (actions)	No target in place

(1) "Residual" refers to the materiality assessment that takes into account existing mitigation measures.

(2) "Inherent" refers to the materiality assessment without taking into account any existing mitigation measures

E1 – Climate change adaptation							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ⁽¹⁾ or inherent ⁽²⁾ basis	ST response	Targets
Risk of natural catastrophe due to chronic and/or acute climate-related events damaging ST's assets, disrupting operations and causing business interruption	Physical Risk	Potential	Own operations	Long term	Residual basis	ST's climate adaptation program	No target in place
Risk of natural catastrophe due to chronic and/or acute climate-related events damaging suppliers' assets, disrupting operations and causing business interruption	Physical Risk	Potential	Upstream	Long term	Residual basis	ST's responsible supply chain program	No target in place

Risk of natural catastrophe due to chronic and/or acute climate-related events damaging subcontractors' assets, disrupting operations and causing business interruption	Physical Risk	Potential	Upstream	Long term	Residual basis	ST's climate adaptation program	No target in place
Risk of natural catastrophe due to chronic and/or acute climate-related events damaging distributors and customers assets, disrupting operations and causing business interruption	Physical Risk	Potential	Downstream	Long term	Residual basis	ST's third-party management (actions)	No target in place

(1) "Residual" refers to the materiality assessment that takes into account existing mitigation measures.

(2) "Inherent" refers to the materiality assessment without taking into account any existing mitigation measures

E1 – Energy							
Description	Type of IRO	Actual/Potential	Value chain segment	Time horizon	Material on a residual ⁽¹⁾ or inherent ⁽²⁾ basis	ST response	Targets
Negative impact on other users from absolute level of energy consumption due to Company scale resulting in significant relative weight of ST electricity consumption in electricity grid	Negative impact	Actual	Own operations	Short term	Residual basis	ST's carbon neutrality program	We aim to adopt 100% renewable electricity by 2027 through energy procurement and renewable energy installations and maintain this percentage each year thereafter.
Negative impact on other users from absolute level of energy consumption of suppliers resulting in significant relative weight of electricity consumption in electricity grid	Negative impact	Actual	Upstream	Mid term	Residual basis	ST's carbon neutrality program	We aim to annually save energy, achieving cumulative energy savings of 100 GWh by 2035, versus the baseline year 2024 (entity-specific).
Negative impact on other users from absolute level of energy consumption of subcontractors resulting in significant relative weight of electricity consumption in electricity grid	Negative impact	Actual	Upstream	Short term	Residual basis	ST's carbon neutrality program	No target in place

E1 – Energy							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ⁽¹⁾ or inherent ⁽²⁾ basis	ST response	Targets
Risk of increased power outages for ST due to climate change-induced conditions / events, or due to decision from public authorities (imposing planned or unplanned power outages or rationing), leading to business disruption or interruption	Transition Risk	Potential	Own operations	Long term	Residual basis	ST's carbon neutrality program	We aim to adopt 100% renewable electricity by 2027 through energy procurement and renewable energy installations and maintain this percentage each year thereafter.
Risk of increased power outages for suppliers due to climate change-induced conditions / events, or due to decision from public authorities (imposing planned or unplanned power outages or rationing), leading to business disruption or interruption	Transition Risk	Potential	Upstream	Long term	Residual basis	ST's carbon STRike program	We aim to annually save energy, achieving cumulative energy savings of 100 GWh by 2035, versus the baseline year 2024 (entity-specific).
Risk of increased power outages for subcontractors due to climate change-induced conditions / events, or due to decision from public authorities (imposing planned or unplanned power outages or rationing), leading to business disruption or interruption	Transition Risk	Potential	Upstream	Long term	Residual basis	ST's carbon neutrality program	No target in place
Risk of increased energy costs due to climate-related factors, or products / services / raw materials cost increase indirectly (through the value chain) impacting the Company's operating margin	Transition Risk	Potential	Own operations	Mid term	Residual basis	ST's carbon neutrality program	We aim to adopt 100% renewable electricity by 2027 through energy procurement and renewable energy installations and maintain this percentage each year thereafter.
Opportunity to reduce energy consumption per unit produced (8" equivalent wafer out) leading to increased profitability; or benefit from the development of renewable energy sources through LTAs and PPAs, and enhance company reputation	Opportunity	Potential	Own operations	Long term	Residual basis	ST's carbon neutrality program	We aim to annually save energy, achieving cumulative energy savings of 100 GWh by 2035, versus the baseline year 2024 (entity-specific).

(1) "Residual" refers to the materiality assessment that takes into account existing mitigation measures.

(2) "Inherent" refers to the materiality assessment without taking into account any existing mitigation measures.

E2 – Pollution and chemicals							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ⁽¹⁾ or inherent ⁽²⁾ basis	ST response	Targets
Negative impact from ST on local natural ecosystems caused by existing and / or accidental pollution (e.g., hazardous chemicals and gases use and handling) of soil / air / water / living organisms and food resources	Negative impact	Actual	Own operations	Short term	Residual basis	ST's pollution program	We aim to further decrease Volatile Organic Compound (VOC) emissions from ST's manufacturing sites, to achieve an overall 70% absolute reduction by 2030 vs 2024.
Negative impact from the suppliers on local natural ecosystems caused by accidental pollution (e.g., hazardous chemicals and gases use and handling) of soil / air / water / living organisms and food resources	Negative impact	Potential	Upstream	Long term	Residual basis	ST's responsible supply chain program	No target in place
Negative impact from subcontractors on local natural ecosystems caused by accidental pollution (e.g., hazardous chemicals and gases use and handling) of soil / air / water / living organisms and food resources	Negative impact	Potential	Upstream	Mid term	Residual basis	ST's responsible supply chain program	No target in place
Risk of not being able to substitute hazardous materials (substances of concern and very high concern) and heavy metals (e.g., lead) in processes and products, in line with increasing customers' requirements and / or enactment or reinforcement of regulations banning, restricting or reinforcing obligations on: - handling and storage of materials / gases (e.g. hydrogen) / chemicals (e.g. acids) - usage of materials / gases (e.g. PFCs) / chemicals (e.g. PFAS) in production processes and products - pollution mitigation measures (air, water, soil) regarding materials / gases (e.g. PFCs) / chemicals (e.g. PFAS) resulting in additional direct / indirect (through the value chain) costs and/or capacity reduction	Risk	Potential	Own operations	Long term	Residual basis	ST's chemical program	We aim, alongside our efforts to continuously assess substances of very high concern and substitution, to make all products manufactured at ST 98% halogen-free by 2035 (entity-specific).

(1) "Residual" refers to the materiality assessment that takes into account existing mitigation measures.

(2) "Inherent" refers to the materiality assessment without taking into account any existing mitigation measures.

E3 – Water							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ⁽¹⁾ or inherent ⁽²⁾ basis	ST response	Targets
Risk of increased water shortage for ST due to climate change-induced conditions / events, or due to decision from public authorities (imposing planned or unplanned restrictions or rationing) or restrictions on water discharge (e.g. temperature after treatment), leading to business disruption or interruption	Risk	Potential	Own operations	Mid term	Residual basis	ST's water program	We aim to have an annual water recycling rate of at least 60% by 2035 through implementing innovative programs (entity-specific). We aim to annually save water reaching 6 million cubic meters of water saved by 2035 vs 2024 (entity-specific).
Risk of increased water shortage for subcontractors due to climate change-induced conditions / events, or due to decision from public authorities (imposing planned or unplanned restrictions or rationing) or restrictions on water discharge (e.g. temperature after treatment), leading to business disruption or interruption	Risk	Potential	Downstream	Mid term	Residual basis	ST's responsible supply chain program	No target in place

(1) "Residual" refers to the materiality assessment that takes into account existing mitigation measures.

(2) "Inherent" refers to the materiality assessment without taking into account any existing mitigation measures.

E5 – Waste and circular economy							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ⁽¹⁾ or inherent ⁽²⁾ basis	ST response	Targets
Negative impact on the environment (landfill, waste treatment) resulting from generation of residual ST internal waste	Negative impact	Potential	Own operations	Mid term	Residual basis	ST's waste and circular program	We aim, each year, to reuse, recycle, and recover at least 95% of our waste, and to limit waste disposal to below 5%.
Negative impact on the environment (landfill, waste treatment) resulting from generation of residual suppliers' internal waste	Negative impact	Potential	Upstream	Mid term	Residual basis	ST's responsible supply chain program	No target in place
Negative impact on the environment (landfill, waste treatment) resulting from generation of residual subcontractors' internal waste	Negative impact	Potential	Upstream	Mid term	Residual basis	ST's responsible supply chain program	No target in place
Negative impact on the environment at the end of life of our products due to residual presence of harmful materials	Negative impact	Potential	Own operations	Long term	Inherent basis	ST's chemicals program	No target in place

(1) "Residual" refers to the materiality assessment that takes into account existing mitigation measures.

(2) "Inherent" refers to the materiality assessment without taking into account any existing mitigation measures.

S1 – Own workforce							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ⁽¹⁾ or inherent ⁽²⁾ basis	ST response	Targets
Negative impact on own workforce due to difficulties in securing labor rights (e.g., excessive working hours, adequate wages) and human rights (incl. all forms of forced / bonded labor, child labor, student workers, inadequate housing)	Negative impact	Potential	Own operations	Short term	Residual basis	ST's labor and human rights program	We aim to achieve RBA platinum recognition for all majority-owned main manufacturing sites by 2030 (entity-specific).
Negative impact on own workforce due to leakage of sensitive personal information related to employees, either from ST or duly contracted third parties, leading to harmful consequences for individuals concerned (e.g., harassment, fraud, blackmail, identity theft, etc.	Negative impact	Potential	Own operations	Long term	Inherent basis	ST's data privacy program	No target in place
Risk of human rights violation (incl. all forms of forced / bonded labor, child labor and student workers consideration, inadequate housing) for our own workforce leading to allegation, litigation, fines or penalties as well as affecting ST social objectives, commitments and reputation	Risk	Potential	Own operations	Long term	Inherent basis	ST's labor and human rights program	We aim to achieve RBA platinum recognition for all majority-owned main manufacturing sites by 2030 (entity-specific).
Negative impact on our workforce due to occupational injuries, illnesses (e.g., related to hazardous chemicals or repetitive strain injuries), mental health issues, exhaustion, poor well-being in the workplace or other consequences	Negative impact	Potential	Own operations	Long term	Inherent basis	ST's safety firST program	We aim, each year, to achieve a Total Recordable Case rate of 0.75 or less for work-related injuries and illnesses, including onsite value chain workers (entity-specific).
Negative impact on own workforce and their careers (unequal pay or chances of progression) due to discrimination, harassment in our workplace	Negative impact	Potential	Own operations	Long term	Inherent basis	ST's equal treatment program	We aim to maintain an adjusted gender pay gap below 5% at company level each year (entity-specific). We aim for the representation of women in management and Senior Management roles to be at least 25% by 2035 (entity-specific).

(1) "Residual" refers to the materiality assessment that takes into account existing mitigation measures.

(2) "Inherent" refers to the materiality assessment without taking into account any existing mitigation measures.

S2 – Workers in the supply chain							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ⁽¹⁾ or inherent ⁽²⁾ basis	ST response	Targets
Negative impact on suppliers' workers due to human rights violation (forced labor incl. bonded labor)	Negative impact	Potential	Upstream	Short term	Residual basis	ST's responsible supply chain program	Target setting in process
Negative impact on subcontractors' workers due to human rights violation (forced labor incl. bonded labor)	Negative impact	Potential	Upstream	Long term	Inherent basis	ST's responsible supply chain program	
Negative impact on supplier's workers due to human rights violation (child labor and young workers)	Negative impact	Potential	Upstream	Long term	Inherent basis	ST's responsible supply chain program	
Negative impact on subcontractors' workers due to human rights violation (child labor and young workers)	Negative impact	Potential	Upstream	Long term	Inherent basis	ST's responsible supply chain program	
Risk of human rights violation (incl. all forms of forced labor) for subcontractors' workers leading to allegation, litigation, fines or penalties towards ST as well as affecting ST social objectives, commitments and reputation, resulting in business loss	Risk	Potential	Upstream	Long term	Inherent basis	ST's responsible supply chain program	

(1) "Residual" refers to the materiality assessment that takes into account existing mitigation measures.

(2) "Inherent" refers to the materiality assessment without taking into account any existing mitigation measures.

S3 – Affected communities							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ⁽¹⁾ or inherent ⁽²⁾ basis	ST response	Targets
Negative impact on local communities from absolute level of public / potable water usage in local water basin due to Company scale resulting in significant relative weight of ST water consumption	Negative impact	Actual	Own operations	Short term	Residual basis	ST's community engagement program	We aim to certify 100% of our manufacturing sites through the Alliance for Water Stewardship (AWS) by 2035 (entity-specific).
Negative impact on local communities from absolute level of public / potable water usage in local water basin of subcontractors resulting in significant relative weight of water consumption	Negative impact	Actual	Upstream	Short term	Residual basis	ST's community engagement program	No target in place

- (1) "Residual" refers to the materiality assessment that takes into account existing mitigation measures.
 (2) "Inherent" refers to the materiality assessment without taking into account any existing mitigation measures.

G1 – Governance							
Description	Type of IRO	Actual/ Potential	Value chain segment	Time horizon	Material on a residual ⁽¹⁾ or inherent ⁽²⁾ basis	ST response	Targets
Risk of not being alerted or informed of situations / allegations / matters from own workforce that would require an assessment or investigation, which would expose the Company to reputational, financial and other liabilities	Risk	Potential	Own operations	Long term	Inherent basis	ST's whistleblowing program	No target in place
Risk of non-compliance with applicable anti-corruption / anti-bribery rules, which would expose the Company to reputational, financial and other liabilities	Risk	Potential	Own operations	Long term	Inherent basis	ST's anti-bribery and anti-corruption program	No target in place

- (1) "Residual" refers to the materiality assessment that takes into account existing mitigation measures.
 (2) "Inherent" refers to the materiality assessment without taking into account any existing mitigation measures.

Appendix 11.5 ST main manufacturing sites

We currently operate fourteen main manufacturing sites around the world. The table below sets forth certain information with respect to our current main manufacturing facilities, products and technologies. Front-end manufacturing facilities are fabs and back-end facilities are assembly, packaging and final testing plants.

Location ^{(1) (6)}	Products	Technologies
Front-end facilities⁽²⁾		
Agrate, Italy ⁽³⁾	Application-specific, MEMS, smart power and analog ICs	Fab 1: 200mm, BCD and MEMS Fab 2: 200mm, advanced BCD and integrated GaN power ICs Fab 3: 300mm, analog CMOS, BCD, and embedded non-volatile memories
Ang Mo Kio, Singapore	Application-specific, analog, commodity, MEMS, microcontrollers, non-volatile memories and power transistors	Fab 1: 150mm, BCD, Bi-CMOS, Bipolar, CMOS logic, EEPROM, MEMS, microfluidics, power MOS and SiC power devices Fab 2: 200mm, advanced BCD, BCD, EEPROM, embedded non-volatile memories, power MOS and VIPower™
Catania, Italy	Application-specific, power transistors and smart power and analog ICs	Site 1 Fab 1: 150mm, SiC power devices and RF GaN Fab 2: 200mm, advanced BCD, power MOS, SiC power devices and VIPower™ Site 2 (SiC) Substrate manufacturing facility for the production in volume of 200mm SiC epitaxial substrate
Crolles, France ⁽⁴⁾	Application-specific, optical sensors, leading edge logic and non-volatile memories and microcontrollers	Fab 1: 200mm, analog/RF, CMOS, Bi-CMOS and optical sensing Fab 2: 300mm, analog/RF, Bi-CMOS, bulk CMOS, embedded non-volatile memories, FD-SOI advanced CMOS and optical sensing
Norrköping, Sweden	Industrialization, research and development and SiC substrate	SiC 150mm and 200mm wafers; N+ doped and semi insulated
Rousset, France	Application-specific and standard and secure microcontrollers	Fab: 200mm, analog/RF, Bi-CMOS EEPROM, embedded non-volatile memories and CMOS and VIPower™

Tours, France	ASD™ power transistors, diodes, IPAD™ and protection thyristors	Fab 1: 150mm, Transil, Trisil, Schottky diodes and Thyristor/ TRIACs Fab 2: 200mm IPD, power GaN and rectifiers
Back-end facilities (2)		
Bouskoura, Morocco	Discrete and standard, micro modules, power and power module, RF and subsystems	Micromodules, power discrete, power automotive SMD, die packaging and SOIC
Calamba, Philippines	Application-specific and standard, MEMS	Wire bond BGA, optical sensors module, MEMS sensors module, wafer level packaging and QFN
Kirkop, Malta	Application-specific, MEMS, microcontrollers	MEMS sensors module, wire bond BGA flip chip BGA and QFP
Marcianise, Italy	Secure microcontrollers and smartcards	Reel-to-reel secure device provisioning and smartcards and issuance technology
Muar, Malaysia	Application-specific and standard, microcontrollers	Wire bond BGA, power automotive SMDs, QFP and SOIC and panel level packaging
Rennes, France	Application specific	Rad-hard technologies
Shenzhen, China ⁽⁵⁾	Application-specific and standard, discrete, non-volatile memories, optical packages, power and power module	Optical sensors modules, power discrete, power automotive SMDs, power modules, flip chip CSP, power QFN, die packaging, and SOIC

(1) This table does not include (i) the new 200mm SiC device manufacturing joint venture with Sanan Optoelectronics in Chongqing, China, which we are currently building as we announced on June 7, 2023; and (ii) the new high-volume 200mm SiC manufacturing facility for power devices and modules, as well as test and packaging, which we are currently building in Catania, Italy, as we announced on May 31, 2024. Sites not yet in production are not included in this year's sustainability statement, unless otherwise specified.

(2) Front-end manufacturing facilities are fabs and back-end facilities are assembly, packaging and final testing plants.

(3) Fab 3 is currently shared between the Company and Tower Semiconductor.

(4) The jointly-operated 300mm semiconductor manufacturing facility with GlobalFoundries Inc in Crolles, France, which has received European Commission approval, has a projected cost of €7.5 billion of capital expenditure, maintenance and ancillary costs and will benefit from financial support of up to roughly €2.9 billion from the State of France in line with the European Chips Act.

(5) Jointly owned with Shenzhen SEG Hi-Tech Industrial Company Limited, a subsidiary of Shenzhen Electronics Group.

(6) This list does not include our sites which have ancillary manufacturing activities, such as testing at our site in Toa Payoh, Singapore, and R&D activities at our sites in Castelletto, Italy and Grenoble, France.

Appendix 11.6. Certain Definitions

AGM	annual general meeting of shareholders
AI	artificial intelligence
AM&S	analog products, MEMS and sensors
APeC	Asia Pacific excluding China
APMS	analog, power & discrete, MEMS and sensors
ASIC	application-specific integrated circuit
ASSP	application-specific standard product
AWIL	advanced women in leadership
AWS	alliance for water stewardship
BEPS	base erosion and profit shifting
BGA	ball grid array
Bi-CMOS	bipolar CMOS process technology
CapEx	capital expenditure
CAPG	climate adverse process gases, which are all gases used in production processes with C-F bond (PFC) with Global Warming Potential (GWP) as well as other gases as SF6, NF3, N2O with a Global Warming Potential having similar effects on climate change
CCT	corporate crisis team
CDP SpA Loans	Cassa Depositi e Prestiti SpA Loans
CE&P	compliance, ethics and privacy
CEO Agreements	employment contracts among ST and our President and Chief Executive Officer
CFO Agreement	employment contract among ST and our President and Chief Financial Officer
CHRO	President Human Resources and Corporate Social Responsibility
CMOS	complementary metal-on silicon oxide semiconductors
CMRT	conflict minerals reporting template
CO2eq	carbon dioxide equivalent, measured in kilograms (kCO2eq), tonnes (tCO2eq) or kilotonne (ktCO2eq)
COP21	the twenty-first session of the conference of the parties to the United Nations framework convention on climate change
Group VP Sustainability	Corporate Sustainability Group Vice President
Corporate Water Program	program deployed at all ST's manufacturing sites, aiming to minimize ST's water footprint and to monitor water-related risks
CSRD	EU Directive as regards corporate sustainability reporting (EU Directive 2022/2462)
D&RF	digital ICs and RF products
DMA	double materiality assessment conducted in accordance with the ESRS
DMOS	double-diffused metal-oxide-semiconductors
DRAM	dynamic random-access memory
2024 DMA	double materiality assessment applicable for the financial year 2024, and as further detailed in Section 3.4.2.4 (<i>Impact, risk and opportunity management</i>)
EAC	energy attribute certificate
ECOPACK	ST-trademarked grading system to classify environmental compliance of products

EEA	European Economic Area
EEPROM	electrically erasable programmable read-only memory
EFRAG	European financial reporting advisory group
EHS	environmental, health and safety
EIB Loans	European investment bank loans
EMAS	eco-management and audit scheme
EMEA	Europe, Middle-East and Africa
EMIR	European market infrastructure regulation
ENGIE	ENGIE Renewable SEA Pte Ltd
ERG	employee resource group
ERM	enterprise risk management
ESG	environmental, social and governance
ESIA	European semiconductor industry association
ESRS	European sustainability reporting standards
Ethics Hotline	mechanism through which ST is able identify and investigate concerns about unlawful behavior or behavior allegedly in contradiction to our Code of Conduct, policies and corporate procedures, including incidents of bribery and corruption.
EU	European Union
EU Pillar II Directive	European Commission-published legislative proposal for Pillar II
Euronext Paris	Bourse de Paris
European Pollutant Release and Transfer Register Regulation or E-PRTR	EU regulation concerning the establishment of a European pollutant release and transfer register (EU Regulation 166/2006)
EV	electric vehicle
FD-SOI	fully depleted silicon-on-insulator
FID	first industrial deployment
FVOCI	fair value through other comprehensive income
FVPL	fair value through profit or loss
this reporting year	the financial year ended December 31, 2024
GaN	gallium-nitride
GBA	gender balance act
GDPR	general data protection regulation
GHG	greenhouse gas
GHG Protocol	GHG protocol corporate accounting and reporting standard
GloBe Rules	Global Anti-Base Erosion Model Rules
GRI	global reporting initiative
HFC	hydrofluorocarbons
HFC	refrigerant gas leakage
IC	integrated circuit
IDM	integrated device manufacturer
IFRS	international financial reporting standards
ILO	International Labour Organization
ILO Declaration	ILO Declaration on Fundamental Principles and Rights at Work
IP	intellectual property

IPCC-2019 standard	the 2019 Refinement to the 2006 IPCC guidelines for national greenhouse gas inventories
IPCEI	important project of common European Interest
IPCEI - ME/CT	IPCEI on microelectronics and communication technologies
IRO	impacts, risks and opportunities
ISDA	international swaps and derivatives association
ISO	international organization for standardization
KPIs	key performance indicators
LCA	life cycle assessment
MCU	microcontrollers
MDRF	microcontrollers, digital ICs and RF products
MEMS	micro-electro-mechanical systems
MGP	minerals grievance platform
Moody's	Moody's Investors Service
MOSFET	metal-on silicon oxide semiconductor field effect transistor
MSCI	MSCI ESG RESEARCH LLC or its affiliates
NACE	nomenclature for economic activities, the statistical classification of economic activities in the EU
NPU	neural processing unit
ODMs	original design manufacturers
OECD	the Organization for Economic Cooperation and Development
OECD Guidelines	OECD Guidelines for Multinational Enterprises
OEMs	original equipment manufacturers
OH&S	occupational health and safety
OpEx	operating expense
OSATs	outsourced semiconductor assembly and test
OSHA	US Occupational Safety and Health Act of 1970
P&D	power and discrete products
PFC	perfluorinated compounds
PPA	power purchase agreement
R&D	research and development
RBA	the Responsible Business Alliance
RBA Code of Conduct	adopted as the ST supplier code of conduct
RDI	research, development and innovation activities
REACH	EU Regulation concerning the Registration, Evaluation, Authorisation and Restriction of Chemicals (EU Regulation 1907/2006)
RF-SOI	radio frequency silicon-on-insulator
Rio Declaration	the Rio Declaration on Environment and Development was adopted at the 1992 United Nations Conference on Environment and Development (UNCED), and consists of 27 principles to guide countries toward sustainable development,
RMAP	responsible mineral assurance process
RMI	responsible Minerals initiative
RMS	resilience management system

RoHS	EU Directive on the restriction of the use of certain hazardous substances in electrical and electronic equipment (EU Directive 2011/65)
S&P's	Standard & Poors
SAM	serviceable available market
SBTi	Science Based Targets Initiative, a registered charity and limited company in England and Wales
SDG	United Nations sustainable development goals
SEC	U.S. Securities and Exchange Commission
SG&A	selling, general and administrative
SiC	silicon carbide
SM&A	segment marketing and application
SoC	system-on-a-chip
ST Holding	STMicroelectronics Holding N.V,
STH Shareholders agreement	ST Holding's shareholders, each of which is ultimately controlled by the French or Italian government, are party to a shareholders agreement
subcontractors	Foundries and OSATs
TAM	total available market
Taxonomy	EU Regulation on the establishment of a framework to facilitate sustainable investment (EU Regulation 2020/852)
TCFD	taskforce on climate-related financial disclosure
TPM	third-party management
TPU	thermal processing units
UN	United Nations
UNGPs	United Nations Guiding Principles on Business and Human Rights
UN Paris Agreement	Paris Agreement under the United Nations Framework Convention on Climate Change adopted on 12 December 2015
VAP	validated audit process
VIPower	vertically integrated power
VOCs	volatile organic compounds
Whistleblowing Directive	European Directive on the protection of persons who report breaches of union law (EU 2019/1937)
WIL	women in leadership
WISE	women inspiring supporting and empowering
WSC	World Semiconductor Council
WSTS	World Semiconductor Trade Statistics

Appendix 11.7

ST policies and procedures referenced in the sustainability statement

ST Policy or procedure	Key content in relation to the IROs identified in the 2024 DMA	Scope	Most senior level in ST accountable for implementation	Availability to potentially affected stakeholders and stakeholders who need to help implement it (st.com / intranet)	Reference to relevant section in the sustainability statement
Anti-bribery and Corruption Policy	This policy sets forth ST's zero-tolerance towards any form of corruption or bribery.	All ST employees and ST organizations	Chief Compliance & Ethics Officer	st.com and ST intranet	3.4.5 Business conduct (Governance - G1) 3.4.5.3 A (G1 - Business conduct)
Code of Conduct	This code states ST's commitment to conduct business with the highest standards of integrity and in compliance with applicable laws and regulations, and provides expectations and guidelines on how business is to be conducted	All ST sites and all ST employees	Chief Compliance & Ethics Officer	st.com and ST intranet	Referenced throughout the sustainability statement, but namely in 3.4.5 Business conduct (Governance - G1) and in 3.4.5.3 A. (G1 - Business conduct)
Conflict of Interest Policy	This policy provides a framework for the transparent reporting and management of any potential conflict of interest.	All ST employees	Chief Compliance & Ethics Officer	ST intranet	3.4.5 Business conduct (Governance - G1) 3.4.5.3 A (G1 - Business conduct)

ST Policy or procedure	Key content in relation to the IROs identified in the 2024 DMA	Scope	Most senior level in ST accountable for implementation	Availability to potentially affected stakeholders and stakeholders who need to help implement it (st.com / intranet)	Reference to relevant section in the sustainability statement
Conflict Minerals Management and Responsible Mineral Sourcing Standard Operating Procedure	This procedure defines the way ST manages relevant conflict minerals issues and responsible mineral sourcing to comply with the applicable regulations and agreed customer requirements	ST organizations involved in ST conflict minerals and responsible mineral sourcing programs and ST suppliers supplying relevant materials	Head of Global Quality and Reliability department	ST intranet	3.4.4. Social 3.4.4.2 C (Supply chain workers)
Corporate Labor and Human Rights Procedure	This procedure sets out the framework for deploying ST's labor and human rights practices.	All ST majority-owned entities and their employees	CHRO	st.com and ST intranet	3.4.4. Social 3.4.4.1 C (S1 - Own workforce) 3.4.4.1 D (S1 - Own workforce) 3.4.4.1 E (S1 - Own workforce) 3.4.4.1 F (S1 - Own workforce) 3.4.4.1 G (S1 - Own workforce)

ST Policy or procedure	Key content in relation to the IROs identified in the 2024 DMA	Scope	Most senior level in ST accountable for implementation	Availability to potentially affected stakeholders and stakeholders who need to help implement it (st.com / intranet)	Reference to relevant section in the sustainability statement
Corporate Occupational Health and Safety Policy	This policy lays down the main principles to establish, implement, maintain and continuously improve ST's Occupational Health and Safety management systems	All ST employees, organizations, products, sites, and activities worldwide, as well as onsite value chain workers or individuals under ST's supervision.	CHRO	st.com and ST intranet	3.4.4. Social 3.4.4.1 C (S1 - Own Workforce) 3.4.4.1 G.1 (S1 - Own workforce)
Corporate Social Responsibility Policy	This policy addresses how ST takes social impact into account in the way it operates as a business.	All ST entities and all employees and workers, including students; temporary, dispatched, outsourced and migrant workers; and on-site service providers	CHRO	st.com and ST intranet	3.4.4. Social 3.4.4.1 C (S1 - Own workforce) 3.4.4.1 G.1 (S1 - Own workforce)
Donation, fundraising and sponsorship procedure	This Procedure provides a general framework and guidance concerning the selection, evaluation, authorization, monitoring and reporting of any donations, fundraising and sponsorships	All ST entities and ST employees	Chief Compliance & Ethics Officer	ST intranet	3.4.5.3 A (G1 - Business conduct)

ST Policy or procedure	Key content in relation to the IROs identified in the 2024 DMA	Scope	Most senior level in ST accountable for implementation	Availability to potentially affected stakeholders and stakeholders who need to help implement it (st.com / intranet)	Reference to relevant section in the sustainability statement
Global Environmental Policy	This policy states ST's objective to limit environmental impacts and risks, and to utilize environmental opportunities through various key actions.	All ST entities and all employees	CHRO	st.com and ST intranet	3.4.3 (Environment) 3.4.3.1 B (E1 - Climate Change) 3.4.3.2 B (E2 - Pollution) 3.4.3.2.D (E2 - Pollution) 3.4.3.3. D (E3 - Water) 3.4.3.4 B (E5 - Waste) 3.4.3.4 D (E5 - Waste)

ST Policy or procedure	Key content in relation to the IROs identified in the 2024 DMA	Scope	Most senior level in ST accountable for implementation	Availability to potentially affected stakeholders and stakeholders who need to help implement it (st.com / intranet)	Reference to relevant section in the sustainability statement
Global Water Policy	This policy details ST's ambition to manage water-related impacts, including impacts of water pollution, through various key actions.	All ST entities and all employees	CHRO	st.com and ST intranet	3.4.3 (Environment) 3.4.3.2 B (E2 - Pollution) 3.4.3.3 B (E3 - Water) 3.4.3.3 C (E3 - Water) 3.4.3.3 D (E3 - Water) 3.4.4.3 C (S3 - Affected communities) 3.4.4.3 F (S3 - Affected communities)
Insider Trading Policy	This policy is aimed at preventing the unlawful use of non-public material information by ST employees.	Supervisory Board and Managing Board and all ST employees	Chief Compliance & Ethics Officer and the General Counsel	ST intranet	3.4.5.3 A (G1 - Business conduct)
Policy Statement on Conflict Minerals and Responsible Minerals Sourcing	ST's statement on managing the issue of conflict minerals and responsible sourcing.	N/A	Head of Global Quality and Reliability department	st.com and ST intranet	3.4.4. Social 3.4.4.2 C (S2 - Supply chain workers)

ST Policy or procedure	Key content in relation to the IROs identified in the 2024 DMA	Scope	Most senior level in ST accountable for implementation	Availability to potentially affected stakeholders and stakeholders who need to help implement it (st.com / intranet)	Reference to relevant section in the sustainability statement
Speak-up Policy	This policy includes information on ST Ethics Hotline available via our website st.com to all, including to ST employees and interested third parties, to report concerns of misconduct, relating to perceived or actual risks and to remediate any situation that may deviate from expectations.	Globally	Chief Compliance & Ethics Officer and the Chief Audit & Risk Executive	st.com and ST intranet	3.4.4.3 F (S3 - Affected Communities) 3.4.4.3. G (S3 - Affected Communities) 3.4.5 Business conduct (Governance - G1) 3.4.5.3 A (G1 - Business conduct)
Stakeholder Engagement Policy	This policy describes ST's ambitions on conducting stakeholder engagement in all relevant areas of sustainability, including environmental and social topics.	All St organizations and all ST employees	CHRO	st.com and ST intranet	3.4.2.3 B (ESRS 2 SBM-2 Interests and views of stakeholders) 3.4.4.3 D (S3 - Affected communities)

ST Policy or procedure	Key content in relation to the IROs identified in the 2024 DMA	Scope	Most senior level in ST accountable for implementation	Availability to potentially affected stakeholders and stakeholders who need to help implement it (st.com / intranet)	Reference to relevant section in the sustainability statement
Supply Chain Responsibility Standard Operating Procedure	This procedure establishes a common and transversal framework for managing social and environmental due diligence in ST's supply chain	All ST entities and all ST's suppliers	Head of our Global Procurement Organization	ST intranet	3.4.4. Social 3.4.4.2 C (S2 - Workers in the supply chain)
Third party due diligence procedure	General framework and guidance for the assessment of ethical, compliance, regulatory and reputational risks of third parties doing or seeking to do business with ST	All ST organizations doing business or seeking to do business with a third party	Chief Compliance & Ethics Officer	ST intranet	3.4.5.3 A (G1 - Business conduct)

Appendix 11.8. ST certifications

ST is ISO 9001, ISO 22301 and IATF 16949 certified company-wide. The below table lists certain specific ST site certifications.

	ISO 45001 - Health and safety	ISO 14001 - Environment	EMAS Environment performance disclosure	ISO 50001 Energy

Appendix 11.9 Long-term sustainability targets

The below list contains our current long-term (entity-specific) sustainability targets.

Sustainability matter	Target	ST perimeter
Climate change mitigation	<p>We aim to achieve a 20% overall reduction in absolute scope 1 and 2 emissions by 2030 vs 2024.</p> <p>We aim to abate at least 90% of our climate adverse process gases ("CAPG") emissions by 2030 (entity-specific).</p>	Our fourteen main manufacturing sites, our R&D sites in Castelletto (Italy), Grenoble (France), Greater Noida (India), and our EWS site in Toa Payoh (Singapore).
	We aim to achieve a 10% reduction in our scope 3 upstream GHG emissions by 2030, and a 20% reduction by 2035, vs 2024.	N/A
Energy	We aim to adopt 100% renewable electricity by 2027 through energy procurement and renewable energy installations and maintain this percentage each year thereafter.	Our fourteen main manufacturing sites, our R&D sites in Castelletto (Italy), Grenoble (France), Greater Noida (India), and our EWS site in Toa Payoh (Singapore).
	We aim to annually save energy, achieving cumulative energy savings of 100 GWh by 2035, versus the baseline year 2024 (entity-specific).	Our fourteen main manufacturing sites and our EWS site in Toa Payoh (Singapore).
Pollution	We aim to further decrease VOC emissions from ST's manufacturing sites, to achieve an overall 70% absolute reduction by 2030 vs 2024.	Our fourteen main manufacturing sites, our R&D sites in Castelletto (Italy), Grenoble (France), Greater Noida (India), and our EWS site in Toa Payoh (Singapore).
Chemicals	We aim, alongside our efforts to continuously assess SVHC use and substitution, to make all products manufactured at ST 98% halogen-free by 2035 (entity-specific).	N/A

Water	<p>We aim to have an annual water recycling rate of at least 60% by 2035 through implementing innovative programs (entity-specific).</p> <p>We aim to annually save water reaching 6 million cubic meters of water saved by 2035 vs 2024 (entity-specific).</p>	Our fourteen main manufacturing sites and our EWS site in Toa Payoh (Singapore).
Waste and circular economy	We aim, each year, to reuse, recycle, and recover at least 95% of our waste, and to limit waste disposal to below 5%.	Our fourteen main manufacturing sites, our R&D sites in Castelletto (Italy), Grenoble (France), Greater Noida (India), and our EWS site in Toa Payoh (Singapore).
Own workforce: Working conditions and other related rights	We aim to achieve RBA platinum recognition for all majority-owned main manufacturing sites by 2030 (entity-specific).	Agrate (Italy); Ang Mo Kio (Singapore); Bouskoura (Morocco); Calamba (Philippines); Catania (Italy); Crolles (France); Kirkop (Malta); Muar (Malaysia); Rousset (France); Shenzhen (China); and Tours (France).
Own workforce: Health and safety	We aim, each year, to achieve a TRC rate of 0.75 or less for work-related injuries and illnesses, including onsite value chain workers (entity-specific).	All ST sites and locations worldwide.
Own workforce: Equal treatment and opportunities for all	<p>We aim to maintain an adjusted gender pay gap below 5% at company level each year (entity-specific).</p> <p>We aim for the representation of women in management and Senior Management roles to be at least 25% by 2035 (entity-specific).</p>	All ST sites and locations worldwide.
Workers in the value chain: Working conditions and other related rights	Target setting in process	N/A
Affected communities	We aim to certify 100% of our manufacturing sites through the AWS by 2035 (entity-specific).	Our fourteen main manufacturing sites and our EWS site in Toa Payoh (Singapore).
